And the Commission being of opinion that sufficient reason for a rehearing as prayed for by the New York and Queens Gas Com-

pany in the said second petition, dated January 4, 1918, has not been made to appear and that the allegations of the said second petition for a rehearing are insufficient in form and substance to warrant the granting thereof; it is therefore hereby

2775 Ordered that the second application of the said company, dated January 4, 1918, for a rehearing herein, be and the same hereby is denied; without prejudice, however, to a suitable request by the company for an extension of the time now fixed for its compliance with the directions of the said order of March 19, 1915, should facts and conditions affecting the time of its compliance be deemed to have arisen since the making of said order of March 19, 1915, all as more particularly set out in the opinion of the Commission adopted concerning the said application of January 4, 1918, for rehearing.

By the Commission.

Exhibit D.

Order of Commission Fixing Time for Compliance with Final Order.

At an Adjourned Meeting of the Public Service Commission for the First District Duly Held at Its Office, No. 120 Broadway, in the Borough of Manhattan, City and State of New York, on the 1st Day of February, 1918.

Present:

Oscar S. Straus,
Chairman;
Travis H. Whitney,
Charles S. Hervey,
F. J. H. Kracke,
Charles Bulkley Hubbell,
Commissioners.

Case No. 1856.

In the Matter of Hearing on the Motion of the Commission on the Question of the Extension of the Gas Mains of NEW YORK AND QUEENS GAS COMPANY to Such Extent as May Be Necessary to Serve Residents of Douglaston and Little Neck, in the Borough of Queens, City of New York.

An order in the above-entitled proceeding having been duly made by this Commission on March 19, 1915, providing and directing as follows:

"Ordered that the New York and Queens Gas Company, be and hereby is directed to extend its gas mains and services in such
2777 a manner as may be required reasonably to serve with gas that community lying in the Third Ward of the Borough of Queens, City of New York and known as Douglaston, including Douglas Manor.

"Further ordered that construction on the said proposed extension be begun not later than April 30, 1915, and be completed as far as Alley Pond Road or Main Avenue, Douglaston, by September 1, 1915.

"Further Ordered that on or before April 30th, 1915, New York and Queens Gas Company file with this Commission a general plan or layout showing a proposed transmission and distribution system to be installed pursuant to the terms of this order, that it shall be suitable and adequate to furnish reasonable service to the Community known as Douglaston, including Douglas Manor, and that this extension be completed and in service not later than September 10, 1915.

"Further Ordered that this Order shall take effect forthwith and that within ten days after service thereof said New York and Queens Gas Company notify the Commission in writing whether the terms of this Order are accepted and will be obeyed."

And the New York and Queens Gas Company having applied to the Commission, under date of April 10, 1915, for a rehearing in respect to such order, and an order having been duly made by this Commission on April 27, 1915, denying the Company's application for a rehearing:

And a writ of certiorari having, on April 30th, 1915, been issued by the Supreme Court of the State of New York in and for the
2778 County of New York, upon the relation of the New York and Queens Gas Company to review the proceedings, actions and decisions of this Commission in the premises, including the said order of March 19, 1915, and the said order of April 27, 1915, denying the Company's application for a rehearing and the Appellate Division of the Supreme Court for the First Judicial Department having, on March 3, 1916, made an order sustaining the said writ of certiorari and annulling the said determination of the Commission, and an appeal having been taken to the Court of Appeals of the State of New York from the said order of the Appellate Division of

he Supreme Court for the First Judicial Department; and the Court f Appeals of the State of New York having, on October 3, 1916, endered a decision on revising the order of the said Appellate Di- ision and affirming and reinstating the said order and determina- ion of this Commission; and a judgment having been entered by he Supreme Court in and for the County of New York, on October 7, 1915, making the order and judgment of the Court of Appeals he judgment of that Court herein:

And the New York and Queens Gas Company having thereafter nd on January 31, 1917, procured a writ of error to review the last nentioned judgment of the Supreme Court of the State of New York, nd the United States Supreme Court having rendered a decision on December 10, 1917, affirming the judgment of the State Court so re- iewed; and the mandate of the United States Supreme Court affirm- ing said judgment having been remitted to the Supreme Court of the State of New York and duly filed in the office of the Clerk of the County of New York, and an order having been entered by
2779 the Supreme Court in and for the County of New York on January 31, 1918, making the order and judgment of the United States Supreme Court the judgment of the Supreme Court of the State of New York.

And it appearing that meanwhile the times fixed by the said order of March 19, 1915, for beginning and completing the construction and filing with the Commission the plan and layout of the proposed transmission and distribution system have expired and elapsed it is, therefore,

Ordered that the time within which the construction of the said proposed extension of gas mains and services shall be begun by the New York and Queens Gas Company, pursuant to the said order of this Commission made herein on March 19, 1915, be and is hereby fixed at not later than March 1, 1916 and the time within which the construction of the said proposed extension as far as Alley Pond or Main Avenue, Douglaston, shall be completed by the said Company, be and is hereby fixed at July 1, 1918, and it is

Further ordered that the time on or before which the New York and Queens Gas Company shall file with this Commission a general plan or layout showing a proposed transmission and distribution sys- tem to be installed by it, which shall be suitable and adequate to furnish reasonable service to the community known as Douglaston, including Douglas Manor, pursuant to the term of the said order of this Commission made on March 19, 1915, be and is hereby fixed at, on, or before March 1, 1918, and that the time not later than which the extension shall be completed by the said company and in service be fixed at not later than July 1, 1918, and it is

2780 Further ordered that this order shall take effect forthwith, and that within ten days after the service thereof said New York and Queens Gas Company shall notify the Commission in writ- ing whether the terms of the order of March 19, 1915, are accepted and will be obeyed within the times specified in this order.

By the Commission.

[L. S.] JAMES B. WALKER,
Secretary.

2781 DEFTS.' EX. U.

Opinion Denying the Second Application of the Company for a Rehearing.

EXHIBIT E.

Public Service Commission of the State of New York for the First District.

Case No. 1856.

In the Matter of the Hearing on the Motion of the Commission on the Question of the Extension of the Gas Mains of the NEW YORK AND QUEENS GAS COMPANY to Such Extent as May Be Necessary to Serve Residents of Douglaston, Douglas Manor, and Little Neck, in the Borough of Queens, City of New York.

HERVEY, *Commissioner:*

Following the unanimous affirmance of this Commission's order by the New York Court of Appeals and the Supreme Court of the United States, the New York and Queens Gas Company comes for a second time to this Commission to ask for a re-hearing as to the order so affirmed. The Commission's denial of the first application for rehearing was a part of the record passed upon by the Courts, and the refusal of that application has been sustained by the highest Court of the State and the Nation.

2782 I am of the opinion that this second effort to obtain a reconsideration of the propriety of requiring this company to live up to its franchise obligations should be denied, and steps taken to bring about early compliance with the Commission's order to punish non-compliance. The early extension of gas mains and service, within the petitioner's franchise area, as called for by the Commission's Order of March 19, 1915, is greatly needed by the residents of the communities affected, and the Commission should not countenance the company's unconscionable effort to obtain further delay without recognition of its legal obligations. When this matter was

acted upon by the Commission in the fall of 1915, the Opinion adopted by the Commission said, in part:

"If the people in this section of the Borough of Queens are to be benefited by the transfer of control to the Consolidated Company, it would seem that this is an opportune moment. It is surprising that so soon after the decision permitting the Consolidated Company to acquire control of the New York & Queens Gas Company, that Company should refuse to make extensions to Douglaston unless it is assisted financially by the consumers themselves, for the company states that it is willing to build the new main, provided the consumers or some one will advance the money and will accept repayment month by month to the extent of 25 per cent. of the gas bills.

"When the company accepted franchises for the whole of the Third Ward, it assumed certain obligations. The company may not have obligated itself to lay mains throughout the entire area
2783 regardless of the density of population, but it certainly can not go to the other extreme, select the most profitable parts and leave the less profitable areas to look out for themselves. At present, however, it assumes very much such an attitude towards the Douglaston area. The company is supplying gas to other areas which are populous and easily supplied. Even Bayside, a suburban development immediately to the west of Douglaston, receives gas. It will always be expensive to lay mains to serve the Douglaston area, for Alley Creek and the Bay intervene, and the gas works have been located by the company far from this section. The existing distribution system is not adequate to supply Douglaston in addition to the other areas now being supplied, and long mains must be built not merely from the ends of the mains to the west of Douglaston, but far back to the gas works.

"Apparently, these conditions will continue. The topographical situation can not be changed, and the distribution system is not likely soon to be re-built. If the company's position is sound, the residents of the Douglaston area can not obtain gas until their district becomes so populous that the new business will earn 6 per cent. on the cost not only of the mains in their own territory but of the mains clear back to the works. If the works are located far enough away, this day will be very far distant; and yet the company in the meantime holds franchises in reserve, building upon them as it wishes. Is it fair for a company to select the most profitable areas and then contend before this Commission that it should not be required
2784 to build elsewhere unless the new business will earn 6 per cent. on the cost of construction? This principle has been rejected by the Commission in the case of street railways, and the Commission's decision has been approved by the courts."

The Commission's action in the matter was unanimously upheld by a clearly reasoned opinion in the New York Court of Appeals, in the course of which it was said:

"The public service commissions are authorized by law to order reasonable improvements and extensions of the works, wires, poles,

lines, conduits, ducts and other reasonable devices, apparatus and property of gas corporations, electrical corporations and municipalities." (Pub. Serv. Com. Law [Cons. Laws, Ch. 48], Sec. 66.)

"Under the authority of this statute the Public Service Commission for the first district made the order requiring the relator to extend its gas mains and services to meet the reasonable requirements of Douglaston and Douglas Manor.

* * * * * * *

"The public service commissions were created by the legislature to perform very important functions in the community, namely, to regulate the great public service corporations of the state in the conduct of their business and compel those corporations adequately to discharge their duties to the public and not to exact therefor excessive charges. It was assumed perhaps by the legislature
2785 that the members of the public service commissions would acquire special knowledge of the matters intrusted to them by experience and study, and that when the plan of their creation was fully developed they would prove efficient instrumentalities for dealing with the complex problems presented by the activities of these great corporations.

* * * * * * *

"The question now is whether or not there was any evidence to show that the order of the public service commission was an unlawful and arbitrary exercise of power.

"There was no dispute as to the basic facts of the case. There was some variation in the estimates of the witnesses as to the cost of iron pipe and the expense of engineering supervision and like matters, but there was no real disagreement as to the cost of the extension of the relator's system of gas distribution, and the increase in revenue that the relator would probably receive therefrom.

"The court at the Appellate Division in its opinion summed up the proof on the subject. The court said that the cost of the extension would be between $60,000 and $70,000 and that the increased return to the relator from the consumption of gas would be about $1,950 per year, which is only one-half of the interest at five per cent upon the extension.

"This is very far from showing that the order of the Public Service Commission was simply an arbitrary and capricious exercise of power. * * * "

2786 The Supreme Court of the United States likewise sustained with a unanimous voice the action of the State tribunal. The notable opinion read by Mr. Justice Clarke expressed views which apply with great force to many of the allegations of the company's second petition for a re-hearing:

"* * * The case is now in this court for review of the judgment entered upon the decision of the Court of Appeals and it is presented upon a single assignment of error, viz: 'That the order of

the Public Service Commission * * * was illegal and void in that it deprived the Gas Company of its property without due process of law and denied to it the equal protection of the laws, in violation of the Fourteenth Amendment to the Constitution of the United States, in requiring the company to extend its distributing system under great physical difficulties and at enormous expense to an independent and remote community which the company was under no present duty to supply with gas when it appeared that the Gas Company would not obtain an adequate return from the expenditure required to make such extension.'

"More compactly stated, this assignment of error is, that the order deprived the gas company of its property without due process of law, because obedience to it would require an expenditure of money upon which the prospective earnings would not provide an adequate return.

"The Court of Appeals of New York decided that the Public Service Commission was created to perform the important function
2787 of supervising and regulating the business of public service corporations; that the state law assumes that the experience of the members of the Commission especially fits them for dealing with the problems presented by the duties and activities of such corporations; that the courts in reviewing the action of the Commission have no authority to substitute their judgment as to what is reasonable in a given case for that of the Commission, but are limited to determining whether the action complained of was capricious or arbitrary and for this reason unlawful; and that it was clearly within the power of the Commission to make the order which is here assailed.

"This interpretation of the statutes of New York is conclusive, and the definition, thus announced, of the power of the courts of that State to review the decision of the Public Service Commission, based as it is in part on the decision in Interstate Commerce Commission v. Illinois Central R. R. Co., 215 U. S. 452, 470, differs but slightly, if at all, from the definition of this court of its own power to review the decisions of similar administrative bodies, arrived at in many cases in which such decisions have been under examination. Typical cases are: Baltimore & Ohio R. R. Co. v. Pitcairn Coal Co., 215 U. S. 481-494; Kansas City Southern Co. v. United States, 231 U. S. 423, 443-4; Louisiana R. R. Co. v. Cumberland Tel. & Tel. Co., 212 U. S. 414, 420-2; Interstate Commerce Commission v. Union Pac. Railroad Co. 222 U. S. 541-547, and Cedar Rapids Gas Co v. Cedar Rapids, 223 U. S. 655, 668.

"It is the result of these and similar decisions, that while in such cases as we have here this court is confined to the federal ques-
2788 tion involved and therefore has not the authority to substitute its judgment for that of an administration commission as to wisdom or policy of an order complained of, and will not analyze or balance the evidence which was before the Commission for the purpose of determining whether it preponderates for or against the conclusion arrived at, yet it will, nevertheless, enter upon such an examination of the record as may be necessary to determine whether the federal constitutional right claimed has been denied, as, in this

case, whether there was such a want of hearing or such arbitrary or capricious action on the part of the Commission as to violate the due process clause of the Constitution.

"The result of the application of this rule to the record before us cannot be doubtful. The Gas Company appeared at the hearing before the Commission, cross examined witnesses, introduced testimony and argued the case. On writ of certiorari the case was re-examined by the Appellate Division of the Supreme Court, and it was again reviewed on appeal by the Court of Appeals. In the matter of procedure plainly the company cannot complain of want of due process of law.

"The record shows that the company at the time of the hearing had franchises authorizing it to manufacture and sell gas throughout the Third Ward of the Borough of Queens, in the City of New York, and that, it being the only company which had franchises for any part of that area, the community to which it was ordered to
extend its distributing system must continue without gas if
279 the order does not become effective.

"The community of Douglaston, including Douglas Manor, was a rapidly growing settlement of three hundred and thirty houses, of an average cost of $7,500, thus giving assurance that the occupiers of them would be probably users of gas, and which, with very few exceptions, were occupied by families the entire year. While the community is described in the assignment of error as 'independent and remote' the record shows that it was served at the time by franchise holding companies, which supplied water, electric light and telephone to its inhabitants, and that the number of houses has doubled within a few years.

"The length of the extension ordered was about one and one-half miles but the mains of the company, which extended to the point nearest to Douglaston, were being used to almost their full capacity and for this reason the estimated cost of making the improvement included new mains of some eight miles in length. The engineer of the Gas Company testified that the cost of the ordered extension would be approximately $86,000, while the engineer for the Commission estimated the cost at $61,000. The Commission found that only $45,000 of the new investment required would be properly chargeable against the extension ordered, since the newer and larger mains would be available in part for other business.

"On the basis of the company's estimate of the cost of the extension the income would be about 2¼% per annum, and, on the
basis of the estimate by the Commission of the part of the
279 cost properly chargeable to the Douglaston community the income would be 4%. There is no showing in the record as to the fair value of the entire property of the Gas Company used in the public service, nor of the rate of return which it was earning thereon, and therefore even if the return on the cost of complying with the order be conceded to be inadequate, this would not suffice to render the order legally unreasonable. Atlantic Coast Line R. Co. v. North Carolina Corporation Commission, 206 U. S. 1, 24-

Mis. Pac. Ry. Co. v. Kansas, 216 U. S. 262; Puget Sound Traction Co. v. Reynolds, 244 U. S. 574, 580.

"It is significant also that within a year preceding the hearing by the Commission the Gas Company proposed in writing to the residents of Douglaston that it would extend its mains to the settlement if they would advance $10,000, to be returned in semi-annual credits upon the amount of gas consumed.

"These references to the evidence will suffice. They show this Public Service Commission ordering a public service corporation to render an important public service, under conditions such that in the aspect least favorable to the Gas Company the initial return upon the investment involved would be low but with every prospect of its soon becoming ample, and also that no claim was made by the Company that the comparatively small loss which the company claims would result would render its business as a whole unprofitable.

"Corporations which devote their property to a public use may not pick and choose, serving only the portions of the territory
2791 covered by their franchises which it is presently profitable for them to serve and restricting the development of the remaining portions by leaving their inhabitants in discomfort without the service which they alone can render. To correct this disposition to serve where it is profitable and to neglect where it is not, is one of the important purposes for which these administrative commissions, with large powers, were called into existence, with an organization and with duties which peculiarly fit them for dealing with problems such as this case presents, and we agree with the Court of Appeals of New York in concluding that the action of the Commission complained of was not arbitrary or capricious, but was based on very substantial evidence * * *"

Most of the matters alleged in the present application for a re-hearing were considered, in identical or somewhat similar form, upon the original hearing or in connection with the company's first application for a re-hearing. For the most part, the allegations of the present petition are vague and insufficient—much more indefinite and inadequate, in fact, than those of the petition already passed on adversely by the Commission. With the sole exception of conditions claimed to have arisen by reason of the European War, during the time the company was unsuccessfully litigating instead of building the needed extensions, the present petition avers nothing in the nature of definitely stated facts which the Commission has not fully considered at the time the original order was made and the first application for re-hearing denied. In fact, as to any matters not in the nature of facts arising since the making of the order,
2792 the Commission would not be disposed to grant a re-hearing at this time, in view of the great need for these extensions, the Company's persistent and successful policy of delay, and the obvious impropriety of this Company's effort "to pick and choose"—to use the Supreme Court's felicitous phrase—"Serving only the portions of the territory covered by their franchise which it is presently profitable for them to serve and restricting the development of the re-

maining portions by leaving their inhabitants in discomfort without
the service which they alone can render." Except as to matters
which have arisen after the time when the company might in good
conscience have complied with its lawful obligations, the companies
had full opportunity to present before the Commission any avail-
able proof in support of the allegations which they now so per-
functorily re-state. As the Supreme Court pointedly said, "to cor-
rect this disposition to serve where it is profitable and to neglect
where it is not, is one of the important purposes for which these ad-
ministrative commissions, with large powers, were called into exis-
ence, with an organization and with duties which peculiarly fit them
for dealing with problems such as this case presents," and I am of the
opinion that the Commission should give no aid to an effort based s
palpably on a desire for further delay.

The lapse of more than three years and a half from the inceptio
of this proceeding finds no step taken by the company to fulfi
what the highest Courts have held to be its franchise obligation
None of that delay has been attributable to the Commission; th
matter has been energetically and successfully prosecuted b
2793 the Commission's representatives through the various Court

But if we assume that the adequate protection of the com
pany's right of resort to the Courts made necessary the lapse of a
the time consumed by the company's effort to litigate where th
highest Courts of the State and Nation unanimously held the
was nothing to litigate, the fact remains that the matter has no
come again into the control of the Commission, after the expiratio
of nearly three years, and the Commission ought now to see to
that the "important purpose" for which it was created is fulfille
as to these Douglaston consumers. As a sheer matter of bringi
about an end to litigation, as the Supreme Court ruled in Knoxv
v. Knoxville Water Co. (212 U. S., 1), there would be ample w
rant for bringing now to a close the company's effort to turn judic
processes into a hippodrome. How serious is this aspect of t
matter is revealed by the following "time-schedule" of this cas

1914—

Spring months:

Complaints by 300 or more residents of Douglaston, Dou
Manor, Little Neck, etc., that the company was doing nothin
fulfill its undoubted franchise obligations to supply them with

June 24:

Company offered in writing to build the extension if resi
would advance $10,000, to be returned on the gas consumed, 2
cent of the gas bills to be returned semi-annually—a proposit
which the acceptance would have brought the completion o
extension and the repayment of the deposit before the
2794 in 1918 when the Commission can possibly secure gas
to these consumers, despite the Commission's success

of the New York Court of Appeals and affirming in all respects
order of the Commission.

1918—

January 1:

No gas yet supplied or gas mains yet laid, to furnish service to
sumers whom the highest courts of the State and Nation h
unanimously held were entitled to receive it, as a matter of the
pany's contract obligations, in 1914, before, and ever since.

January 4:

Company again applies for a re-hearing by the Commission
start the treadmill of delay and litigation all over again, even a
the courts have held the Commission was right in denying the
application for a rehearing.

In point of fact, however, the denial of this re-application for a rehearing may be placed squarely on the inadequacy of the petition to warrant reconsideration of matters already over-litigated. As to the more or less nebulous claims as conditions which the company says have arisen during the period it has failed to utilize its opportunity of compliance with the Commission's order, a petition more comprehensively prepared than that now before the Commission might be conceived to present some very serious questions of
797 law and policy as to the powers and duties of this body. May a company delay for years to do a thing required of it by its franchises and a specific order of the Commission, and gamble on the hazard that during such period of delay the cost of such compliance will become less or that conditions will arise which will still further delay compliance? If the company persistently and flagrantly seeks delay, is it to be excused from compliance altogether because meanwhile costs have risen and compliance now would cost more than at the time of the making of the order? If it be now a real hardship to the gas company to comply with the order of the Commission, in consequence of general conditions affecting the whole nation which would not have been visited upon the company if it had performed in due season the public duty which this Commission and the courts have declared the company has been ignoring for a considerable period of time, shall on one side the company be absolved from the consequences of its own delay and indulged a continued failure to perform its adjudicated obligation, while, on the other side, the public continues to suffer the hardship which the Supreme Court points out the company has long inflicted through withholding a service to which these home-owners have been, and are, indisputably entitled? Upon whom, even under the present trying circumstances, shall be visited the consequences of the company's delay, indifference and violation of duty? These interrogations I do not find it necessary to decide in disposing of this application for a rehearing. There is nothing of substance set out in this petition which calls for further taking of testimony concerning the propriety of the original order. The Company has made no showing of facts in behalf of a reconsideration of
798 the order of March 19, 1915. Certain matters are indicated in the petition which, if sustained by facts, might lead the Commission to the view that a company which had accepted the order and evinced an intent to comply with it in good faith might be entitled thereupon to an extension of time. Even the company's unconscionable delay and its flagrant defiance of its adjudicated obligations will not lead this Commission to seek to compel its compliance now under conditions which might add eventually to the expense-burdens of its consumers. And of course no Commissioner would try to compel the laying of gas mains at a time when the ground is frozen.

I accordingly recommend that an order, in the form submitted herewith, be adopted, denying the company's present application for a re-hearing. In so doing, I feel that the Commission should make clear its willingness and purpose, on suitable applica-

tion by the company, to consider any facts deemed by to warrant any needed extensions of time to begin or com plete an intended compliance with the company's franchi obligations as directed by the Commission's Order. If the Com pany now makes known its desire and purpose, seasonably and i good faith, to do what it should in conscience have done long ag and presents to the Commission any facts by virtue of which it b lieves its time should reasonably be extended, the Commission wi consider such a request for extension, in the light of whatever fac regarding material-supply, labor shortage, war-time financing, an the like, as are brought to its attention upon such application. D spite the long delay which has already taken place, and despite th fact that the Company has only itself to blame for what
2799 says is its present plight regarding prospective cost of com pliance, I am sure that there is no disposition on the pa of the Commission to fail to realize that current conditions call f less than usual rigidity as to dates within which construction wo will be done, and any requests for time reasonably required will considered on their merits.

I recommend the adoption of an order denying the applicati for a re-hearing and also an order fixing new dates for the beginni and completion of performance, the dates fixed by the order March 19, 1915, having expired while the matter was in the Cour The fixation of new rates is of course without prejudice to such application by the Company as I have indicated, if it deems t facts to warrant an extension beyond the dates now fixed.

Dated, New York, February 1, 1918.

CHARLES S. HERVEY,
Commissioner.

OSCAR S. STRAUS and Others, Commissioners, Constituting the P lic Service Commission of the State of New York for the F District, Respondents.

First Department, April 5, 1918.

Public Service Commission—discretionary power to grant reh ing—when certiorari will not lie to compel rehearing den by Commission.

Section 22 of the Public Service Commissions Law, which provides that the Commission may grant and hold a rehearing if in its judgment sufficient reason therefor be made to appear, places the matter of a rehearing wholly within the discretion of the Commission, and its order denying an application for a rehearing cannot be reviewed by writ of certiorari if it does not appear that the Commission has abused its discretion.

Motion by the respondents, Oscar S. Straus and others, constituting the Public Service Commission of the State of New York for the First District, to quash a writ of certiorari brought to review an order of the Commission denying relator's application for a rehearing.

John A. Garver of counsel (Shearman & Sterling, attorneys), for the relator.

William L. Ransom of counsel (Godfrey Goldmark with him on the brief), for the respondents.

PAGE, *J.*:

An order was made March 19, 1915, requiring the relator to extend its mains and services to Douglaston. An application was made for a rehearing on April 10, 1915, and denied April 27, 1915. The relator has by writ of certiorari reviewed the order of the Commission, dated the 19th day of March, 1915, and the order of the Commission was affirmed by the Court of Appeals (People ex rel. New York & Queens Gas Co. vs. McCall, 219 N. Y. 84) and the United States Supreme Court (245 U. S. 345). The relator by a petition verified on the 4th day of January, 1918, applied for a rehearing of the said proceeding, which application was denied and the relator has caused to be issued a writ of certiorari for the purpose of reviewing the order denying said application. Section 22 of the Public Service Commissions Law (Consol. Laws chap. 48; Laws of 1910, chap. 480) provides that on such an application "the Commission shall grant and hold such a rehearing if in its judgment sufficient reason therefor be made to appear."

It is clear that the granting or refusing of the application for a rehearing rests in the discretion of the Commission. (City of Buffalo v. Buffalo Gas Co., 82 Misc. Rep. 304, 310; affd., 160 App. Div. 914, on opinion below.) Clearly, this writ could not bring before us the original determination of the Commission embodied in the order of March 19, 1915, as that order has been exhaustively reviewed by the courts. The sole question before us, therefore, is the disposition of the motion for a rehearing. That matter resting in its discretion, and as it does not appear that the Commission has abused its discretion, the motion to quash the writ should be granted, with fifty dollars costs and disbursements.

Clarke, P. J., Smith, Davis and Shearn, JJ., concurred.

2801 Motion to quash writ granted, with fifty dollars costs and disbursements. Order to be settled on notice.

May 18th, 1920.

Mr. B. Cohen,
Accountant Public Service Commission,
Building.

DEAR SIR:

Relative to your request that you and other accounting representatives of the Public Service Commission for the First District, be accorded the use of a copy of the monthly statistical statements of the New York & Queens Gas Company for the period from 1909 to 1919, I think that in furnishing such copy to you, I ought to call to your attention the fact, well known to your predecessor, Mr. Frank, that these monthly statements are in nowise a record of the transactions of the New York & Queens Gas Company, but are merely statistical studies made for the Company's own convenience and information, from certain of its records, and that the grouping of items and the character of information compiled follow certain lines of study for purposes of particular information desired by the officers of this Company and others interested in such information. If Dr. Weber and you think it may shorten and lessen your labors for you to have the benefit of the use of these studies, the Company has no objection to your examining them, but these calculations are, therefore, not represented to be, and of course, should not be accepted or used by you, as a financial or operating statement of this Company, or as a basis for analysis or deductions in this case.

Very truly yours,

H. C. DAVIDSON.

N. Y. & Queens Gas Co. - 1909 Rep

Replying to your letter of the 7th instant, would say that on page 30, line 3, column (c), should be "Variable". The loans were made as follows:

Jan. 22,1906 $17,000

N.Y. & Queens Gas Co.--1909 Rep

The difference of $166.23 in interest is made up as follows: $50 was paid on the loan owing to the fact that demand loan interest is figured by the day and not by the month; the balance of $116.23 was paid on account of "Materials Purchased", which were allowed to run several months with the understanding that we would pay interest.

Def'ts' Ex. A-25.

Public Service Commission Law, State of New York.

Sec. 69. Approval of issues of stock, bonds and other forms of indebtedness. A gas corporation or electrical corporation organized or existing, or hereafter incorporated, under or by virtue of the laws of the state of New York, may issue stocks, bonds, notes or other evidence of indebtedness payable at periods of more than twelve months after the date thereof, when necessary for the acquisition of property, the construction, completion, extension or improvement of its plant or distributing system, or for the improvement or maintenance of its service or for the discharge or lawful refunding of its obligations or for the reimbursement of moneys actually expended from income or from any other moneys in the treasury of the corporation not secured or obtained from the issue of stocks, bonds, notes or other evidence of indebtedness of such corporation, within five years next prior to the filing of an application with the proper commission for the required authorization, for any of the aforesaid purposes except maintenance of service and except replacements in cases where the applicant shall have kept its accounts and vouchers of such expenditure in such manner as to enable the commission to ascertain the amount of moneys so expended and the purposes for which such expenditure was made; provided and not otherwise that there shall have been secured from the proper commission an order authorizing such issue, and the amount thereof, and stating the purposes to which the issue or proceeds thereof are to be applied, and that, in the opinion of the commission, the money, property or labor to be procured or paid for by the issue of such stock, bonds, notes or other evidence of indebtedness is or has been reasonably required for the purposes specified in the order, and that except as otherwise permitted in the order in the case of bonds, notes and other evidence of indebtedness, such purposes are not in whole or in part reasonably chargeable to operating expenses or to income. Nothing herein contained shall prohibit the commission from giving its consent to the issue of bonds, notes or other evidence of indebtedness for the reimbursement of moneys heretofore actually expended from income for any of the aforesaid purposes, except maintainance of service and replacements, prior to five years next preceding the filing of an application therefor, if in the judgment of the commission such consent should be granted; provided application for such consent shall be made prior to January first, nineteen hundred and twelve. For the purpose of enabling it to determine whether it should issue such an order, the commission shall make such inquiry or investigation, hold such hearings and examine such witnesses, books, papers, documents or contracts as it may deem of importance in enabling it to reach a determination. Such corporation shall not without the consent of

the commission apply said issue or any proceeds thereof to any
pose not specified in such order. Such gas corporation or elect
corporation may issue notes, for proper corporate purposes and
in violation of any provision of this or of any other act, payab
periods of not more than twelve months without such consent;
no such notes shall, in whole or in part, directly or indirectl
refunded by any issue of stock or bonds or by any evidence o
debtedness running for more than twelve months without the
sent of the proper commission. Provided, however, that
commission shall have no power to authorize the capitalizatio
any franchise to be a corporation or to authorize the capitaliza
of any franchise or the right to own, operate or enjoy any franc
whatsoever in excess of the amount (exclusive of any tax or an
charge) actually paid to the state or to any political subdivi
thereof as the consideration for the grant of such franchise or ri
Nor shall the capital stock of a corporation formed by the me
or consolidation of two or more other corporations, exceed the
of the capital stock of the corporations, so consolidated, at the
value thereof, or such sum and any additional sum actually
in cash; nor shall any contract for consolidation or lease be capi
ized in the stock of any corporation whatever; nor shall any
poration hereafter issue any bonds against or as a lien upon
contract for consolidation or merger.

2836 DEFENDANTS' EXHIBIT A-26.

Def'ts' Ex. A-26.

Deputy Tax Commissioners; Duties of, in Assessing Taxable Property.

SEC. 889. It shall be the duty of the deputy tax commissio
under the direction of the board of taxes and assessments, to as
all the taxable property in the several districts that may be assig
to them for that purpose by said board, and they shall furnish
the said board, under oath, a detailed statement of all such prope
showing that said deputies have personally examined each
every house, building, lot, pier, or other assessable property, giv
the street, lot, ward, town and map number of such real estate
braced within said districts, together with the name of the ow
or occupant, if known; also the sum for which, in their judgm
each separately assessed parcel of real estate under ordinary
cumstances would sell if it were wholly unimproved; and separa
stated, the sum for which under ordinary circumstances, the s
parcel of real estate would sell with the improvements, if a
thereon; with such other information in detail relative to pers
property or otherwise, as the said board may, from time to ti
require. Such deputies shall commence to assess real and pers
estate on the first day in April in each and every year not a Sun
or a legal holiday. (As amended by L. 1911, Ch. 455.)

570B. DETAIL OF GAS MANUFACTURING EXPENSES AT EACH STATION

Show hereunder the various items of expense incurred in the manufacture of gas during the year ****, classified in accordance with the Uniform System of Accounts, together with the average cost per M cu.ft. made.

From the total manufacturing expenses (line 29) there should be made a deduction for the value of residuals produced (for use or sale), diminished by the special expense involved in preparing for market, selling and delivering (Account No. 837a-d).

All credit entries in this schedule should be made in red ink.

Line No.	Title of Account	Total Manufacturing expense	Cts. per M cu.ft.made
1	Works superintendence (601a)	$2,340.87	00.75

PAGE 55

570B. GAS PRODUCTION EXPENSES

Show hereunder the various items of expense incurred in the manufacture of gas during the year****, classified in accordance with the Uniform System of Accounts, together with the average cost per M cu.ft. made.

From the total production expenses (line 29) there should be made a deduction for residuals produced, at a fairly estimated cost of manufacture based upon a consideration of average selling price less the special expense involved in preparing for market, selling and delivering.

All credit entries in this schedule should be in red ink.

Line No.	Title of Account	Total mfg.cost of water gas	Cts. per M cu.ft.made
1	Works superintendence (601a)	$1,303.57	00.45
2	Boiler house labor (601b)	3,004.36	01.04
3	Retort house labor (601c)

570B. GAS PRODUCTION EXPENSES

Show hereunder the various items of expense incurred in the manufacture of gas during the year ****, classified in accordance with the Uniform System of Accounts, together with the average cost per M cu.ft. made.

Residuals produced in connection with the respondent's gas operations should be credited to production expenses at a fairly estimated cost of manufacture through the account "Residuals produced--Cr." The estimated cost of manufacture should be determined upon a consideration of average selling price less expense involved in preparing for market, selling and delivering. Residuals put in store should be charged to "Materials and Supplies" at such estimated cost, and when later sold should be charged over to "Cost of manufacturing residuals sold" in General and Miscellaneous Operating Expenses (see p. 57, line 15).

All credit entries in this schedule should be made in red ink.

2959 DEFENDANTS' EXHIBIT A-70.

Extract from the Minutes of the Meeting of the Board of Directors of the New York and Queens Gas Company, Held at No. 208 5th Avenue, New York City, on Friday, October 22nd, 1909, at 2:30 o'clock P. M.

"A letter from Messrs. Krauthoff, Harmon and Mathewson, under date of October 5, 1909, was presented, giving as their opinion that Treasury bonds now held by the Lincoln Trust Company, as collateral for money borrowed, could be sold and the proceeds applied on the

payment of the loans, without making application to the Public Service Commission."

2960 DEFENDANTS' EXHIBIT A-71.

Letter dated November 9, 1910 from Treasurer of the New York and Queens Gas Company, contained in defendant's exhibit A-23. Not printed here.

2961 DEFENDANTS' EXHIBIT A-72.

Def'ts' Ex. A-72. June 9, 1920. H. S.

Attorney General,

State of New York.

The tax law requires that all real estate shall be assessed at its full and true value.

To secure proper attention this form must be used and the questions clearly answered.

N. B.—A separate application must be made for each Block, and filed with the Department of Taxes and Assessments on or before November 15th.

Owner: New York & Queens Gas Co. Address: Flushing, L. I. Borough of Queens.

Application for Correction of Assessed Valuation of Real Estate.

(State Separately for Each Parcel.)

Location of Property No. — —— Street.
Ward or Section —; Volume —; Block 170, Lot 31.
Assessed Valuation, 1917: Land, $12,600.; Total, $577,000.

First. The assessment complained of in this application is erroneous by reason of overvaluation, in that your Honorable Board and the Deputy Tax Commissioners acting under your instructions have assessed the improvements upon the aforesaid lot at the sum of $564,400, whereas the impaired value of such improvements, based upon earnings impaired by rate regulation, taxes and increased cost of operation, is the sum of $540,100. The extent of the overvaluation is, therefore, the sum of $24,300.

Second. The assessment complained of in this application is unequal, disproportionate and erroneous for the reason that in assessing other real estate of like character and all other property improved with manufacturing plants in the ward and borough in which the aforesaid property of your Complainant is situated, and in the City of New York generally, your Honorable Board and the Deputy Tax

missioners acting under your instructions failed to include in the ssment of the improvements on such real estate or property the ue of the machinery, apparatus and appurtenances located therein, ch machinery, apparatus and appurtenances under the provisions ubdivision 6, Section 2 of the Tax Law, are taxable as real estate. his failure to include the value of such machinery, apparatus appurtenances in the assessment of the real estate and improve- nts containing such machinery, apparatus and appurtenances, resulted in the assessment of all real estate of like character and of all lands and of all improvements containing 2 & 2963 such machinery, apparatus and appurtenances (excepting the real property of the Complainant) at the of 60% of the full value of the land, improvements and ma- nery, apparatus and appurtenances, whereas the aforesaid prop- of your Complainant has been assessed at the full cost to repro- e the same, including all machinery, apparatus and appurte- ces. Such inequality is not confined to specific instances, but is eral throughout the City of New York.

The assessment complained of in this application should, therefore, reduced to the sum of $336,660.

Without waiving the objection contained in paragraph "Second" his complaint, complainant alleges as follows:

Third. The aforesaid assessment is unequal, disproportionate and neous for the reason that your Honorable Board and the Deputy Commissioners acting under your instructions, in fixing the ue of Complainant's land and improvements, including ma- nery, apparatus and appurtenances, have fixed and determined assessment of the same at the cost to reproduce such property, rovements, machinery, apparatus and appurtenances, while, upon rmation and belief, the assessments of all other taxable land, real ate and real property in the Borough of Queens, for the year 1917 e been made at valuations equal to about 85% of the full value the land, real estate and real property so assessed. The aforesaid essment should, therefore, be reduced to the sum of $469,795.

The undersigned represents that it is the owner of the above- cribed property and claims to be aggrieved by the aforesaid as- sed valuation, and makes application to the Commissioners of Tax d Assessments to have the same reviewed and corrected, in ac- rdance with the allegations of the aforesaid complaint.

NEW YORK AND QUEENS GAS COMPANY,
By L. B. GAWTRY,
Vice-President.

964 City of New York,
County of New York, ss:

L. B. Gawtry, being duly sworn, says that he is the Vice-President, ner of the above-mentioned premises, and that the statements con-

tained in this application for the revision and correction of the assessed valuation thereof are true.

Name: L. B. GAWTRY,
Address: 130 E. 15th St., City.

Sworn to before me this 14th day of November, 1916.

M. A. COSS,
Commissioner of Deeds, N. Y. City,
Residing in Kings Co.

N. Y. County Clerk's No. 1168.
Register's No. 17072.

Commission expires Sept. 21, 1917.

2965 Dated New York, Dec. 11, 1916.

Hon. Commissioners of Taxes and Assessments.

GENTLEMEN:

I have re-examined the property referred to in the within application, and report as follows:

40 on Farrington.
20 " Myrtle.
20 " Centre.

Factor-Land $—; Building $—; Stories High —.
Sq. Ft. of Floor Surface —.
Condition, Improvements: Good, Suitable.
General Surroundings: Factory & poor tenement frame houses.
Leases ——.
Rents ——.
General remarks: Land is equitably assessed; the Water Gas Plant Bldgs. and Holders are assessed at the total of $564,400, or at the figures of the State Tax Department, after depreciation, of date June 30, 1916.

Land	$12,600
Bldgs.	21,400
Equip.	543,000
	$577,000

Respectfully submitted.

T. J. CRONIN,
Deputy Tax Commissioner.

2966 [Endorsed:] New York & Queens Gas Co., Borough of Queens. Application for Correction of Assessed Valuation of Real Estate. Filed Nov. 15, 1916. ALBANY, _____

SIR:

The following forms, prepared in conformity with the requirements of law, are forwarded you for use in preparing the Report of your company required by Section 43, Chapter 712, Laws 1899.

☞ It is requested that you complete and forward such report as required by that Act on or before December 1, 1903.

Very respectfully,
STATE BOARD OF TAX COMMISSIONERS.

EXTRACT FROM LAW RELATING TO TAXATION OF SPECIAL FRANCHISES

SECTION 1. Subdivision three of section two of the tax law is hereby amended to read as follows:

3. The terms "land," "real estate," and "real property," as used in this chapter, include the land itself above and under water, all buildings and other articles and structures, substructures and superstructures, erected upon, under, or above or affixed to the same; all wharves and piers, including the value of the right to collect wharfage, cranage or dockage thereon; all bridges, all telegraph lines, wires, poles, and appurtenances; all supports and inclosure for electrical conductors and other appurtenances upon, above and under ground, all surface, under ground or elevated railroads, including the value of all franchises, rights or permission to construct, maintain or operate the same in, under, above, on or through streets, highways or public places; all railroad structures, substructures and superstructures; tracks and the iron thereon; branches, switches and other fixtures permitted or authorized to be made, laid or placed in, upon, above or under any public or private road, street or ground; all mains, pipes and tanks laid or placed in, upon, above or under any public or private street or place for conducting steam, heat, water, oil, electricity or any property, substance or product capable of transportation or conveyance therein or that is protected thereby, including the value of all franchises, rights, authority or permission to construct, maintain or operate in, under, above, upon, or through any streets, highways or public places, any mains, pipes, tanks, conduits, or wires, with their appurtenances, for conducting water, steam, heat, light, power, gas, oil, or other substance, or electricity for telegraphic, telephonic or other purposes; all trees and underwood growing upon land, and all mines, minerals, quarries and fossils in and under the same, except mines belonging to the state. A franchise, right, authority or permission specified in this subdivision shall for the purpose of taxation be known as a "special franchise." A special franchise shall be deemed to include the value of the tangible property of a person, copartnership, association or corporation situated in, upon, under or above any street, highway, public place or public waters in connection with the special franchise. The tangible property so included shall be taxed as a part of the special franchise. No property of a municipal corporation shall be subject to a special franchise tax.

Harmon & Mathewson

--------- No. 40 Wall Street,

New York, March 10, 1904.

Benjamin S. Harmon,
Charles F. Mathewson,
Edward J. Patterson
J. Frederick Eagle.

NEWTOWN & FLUSHING GAS COMPANY.

State Board of Tax Commissioners,

Albany, N. Y.

Dear Sirs:-

Referring to our letter of the 7th inst. and affidavit of the Vice-President Thomas therein enclosed, respecting the assessment on franchises for the current year, we beg to add:

We find that the local assessment for "real property of corporations" (that is pipes and mains outside of the public streets), has been increased to $15,000 for 1904, as against $2750 in 1903. On asking of the assessors here an explanation of this fact, they say that they have discovered that a large part of the company's mains are located in ways which have never been dedicated or condemned for public streets, and which cannot be. Consequently, they have assessed these pipes and mains as outside of public high-ways.

This adds a conclusive consideration, we submit, to the application of the company through Mr. Thomas' affidavit to reduce its assessment; since this very fact was stated by

Respondents Exhibit 87

Mr. Thomas in his affidavit, and it would be double taxation for you to assess these pipes as part of the franchises, when they are assessed by the City and recognized to be outside of public high-ways.

Yours truly,

Harmon & Mathewson.

H. L. Snyder, Secretary & Treasurer.

State Board of Tax Commissioners,

Albany,

N. Y.

N. Y.

Dear Sirs:-

I am in receipt of your favor of the 17th instant by Secretary Deyo reading as follows:

"In your report, received at this office December 4th, 1902, you have failed to state the value of your capital stock under Schedule E. If there have been no sales, please quote a fair estimated market value.

Under Schedule G you state that you received $50,000 for capital stock. How much stock was sold for that sum?

The facts in reference to the preferred stock issue, sale and value are as follows: In the spring of 1902 it became apparent that the earnings of the Company were insufficient to meet requirements and that it was necessary to provide at least $50,000 additional funds. It was also apparent that in the present condition of the Company's finances, it would be impossible to place either stock or bonds of the Company with the public; and accordingly, as the

Defendant's Exhibit 90

case was imperative, the interests owning the Company conferred and agreed to make up a fund of the above amount for the Company, each interest contributing its pro rata share.

It was at first designed to issue corporate bonds for the amount; but as the property was already covered by two mortgages (See Schedule F), it was finally determined to increase the $300,000 of common stock, by the creation and issue of preferred stock which should go to the interests contributing; and it being illegal to issue stock for less than par, such interests advanced the $50,000 to the Company and received $50,000 of preferred stock at par therefore.

Whether or not said transaction so far as the Company is concerned might technically be termed a "sale" of the stock at that figure, it was not and is not so considered by the parties. The stock could not have been sold to outsiders at any price; it was not considered by the parties as worth par or anything like it. It made no difference to the respective parties contributing to the fund as to what amount of preferred stock they each received, since they contributed and received preferred stock in the same ratio as their previous holdings of common stock, and their relative interests in the property were thus preserved.

So far as I know, and I think I am in a position to know, there is no "market" value whatsoever for either the preferred or common stock of the Company. There have been no sales of either class of stock to my knowledge, except as the

foregoing may be termed a "sale" of preferred stock. It is difficult, therefore, to quote a "fair market value" unless I were to reply "nothing". There is in fact no "market value" for either. If I were to leave out the work "market" I think I would say that the common stock had no value at present, and that the preferredstock might be worth to the holders (but to no one else) not exceeding 25 per cent of par. I may add that the $50,000 fund went chiefly to payment of debts and construction account outside of the streets.

Trusting that this will give you the information required, we remain,

Yours very truly,

Henry R. Wilson,

Vice-President.

Defendant's Exhibit 90

December 17, 1902.

Dictated by J. H. E.

Newtown & Flushing Gas Company,

Henry R. Wilson, Vice-President,

208 Fifth Avenue,

New York City.

Dear Sir:

In your report, received at this office December 4th, 1902, you have failed to state the value of your capital stock under Schedule E. If there have been no sales, please quote a fair estimated market value.

Under Schedule G. you state that you received $50,000 for capital stock. How much stock was sold for that sum?

Yours very truly,

Secretary.

M. F.

No. 40 Wall Street.

New York, February 21st, 1903.

Benjamin S. Harmon,
Charles F. Mathewson,
Edward J. Patterson.

J. Frederick Eagle.

In the Matter of the Assessment of the
NEWTOWN AND FLUSHING GAS COMPANY on
Special Franchises for the year 1903.

State Board of Tax Commissioners,

Albany, N. Y.

Dear Sirs:-

Referring to the application filed with you on the 18th instant and the writer's oral statement, in relation to the assessment of the above company for the year 1903, and the points which were raised by your engineer respecting which the writer was not able to answer definitely, but offered to afford you further information, we have to say:

1. The Company has acquired no street rights or franchises since the assessment of 1902; on the contrary certain of its franchises covering much the larger part of its territory have been questioned and are under dispute, as shown in said application.

2. It is true, as the report shows, and as your engineer suggested, that for the year ending June 30. 1902 the mileage of the company's pipes in the streets increased; and if such increased pipe were productive, and if the present cost of pipe could be considered

Defendant's Exhibit 90

a fair average cost or value, and if the company's other mains had not depreciated within the year, the value of the company's total mileage in the streets over that specified in the preceding report might fairly be accepted on the basis mentioned by your engineer.

On this subject, however, we beg to say:

(a) The 8-inch pipe of about a mile was run around the border of the village of College Point to pick up the unconnected ends of 3- and 4-inch pipe, in order to make a better circulation in the company's system and to overcome the complaints of poor pressure. It resulted in substantially no new consumers (probably not over a dozen) and was not a "supply line". Consequently it is virtually non-income producing.

The 6-inch pipe, about two miles, was to connect College Point with Whitestone, through an unproductive stretch. There are only fourteen meters on this line, and it is also, therefore, virtually unproductive.

The 4-inch pipe alone is what may be termed "supply pipe", with an income-producing capacity.

(b) The present price of pipe cannot be called an average or reasonable value therefor. The price of all iron and steel products is at present abnormal. In fact, the present cost of pipe is nearly twice the cost at which it has been procurable, at times within the last ten years.

Consequently we claim that it would be unjust to assess the pipe now as of anything more than the fair average cost in ordinary times; that is to say, at least 33% to 40% below present prices.

(c) The old pipes in the ground we find so rotten and corroded that they are worthless when dug up. They are never worth removing from the ground, and are not removed unless we lay the other pipe in the same tranch, and if removed to make room for other pipe are merely sold for junk in every instance, and sometimes the junkman refuses to pay anything for them even as junk.

The pipes being so old and in this condition, the deterioration for a single year is much greater than would be the case with new pipe; and consequently a very large allowance must be made and is made by us for depreciation on such pipe from year to year.

The foregoing represents the consideration which induced the company's estimate of the aggregate increase in value of its

Defendant's Exhibit 70

S.B. of T. C. 3

pipe lines on June 30, 1902 as compared with June 30, 1901. It is submitted that an increase in the assessment of "special franchises" of nearly 50%, from $54,000 to $80,000, is not sustainable in view of the facts now before the Board, and would be a very serious injustice to the company.

Yours very truly,

Harmon & Mathewson

STATE OF NEW YORK,
County of New York, ss:

Harry L. Snyder, being duly sworn, says: I am the Secretary of the Newtown and Flushing Gas Company.

The figures on page 9 of the last report of said company were furnished by me. The amount $17,052.53 opposite the word "Reconstruction" includes both reconstruction and new construction both within and without the limits of the public streets.

The greater part thereof represents improvements to the Company's gas plant at Flushing outside the streets in the shape of new holders and additional furnishings, machinery, etc.

HARRY L. SNYDER.

Sworn to before me this 26th day of March, 1902.

J. FREDERICK EAGLE,
Notary Public, New York County.

Certificates filed in Kings and Queens Counties.

3026 In the Matter of the Assessment of the NEWTOWN AND Flushing Gas Company on Special Franchises for the Year 1902.

STATE OF NEW YORK,
City and County of New York, ss:

Charles G. M. Thomas, being duly sworn, says: I am the Vice-President and General Manager of the Newtown and Flushing Gas Company. I have read the affidavit of Harry L. Snyder hereto annexed, and his statement in reference to the item of $17,052.53 is entirely correct. The amount of new construction in said figures is, so far as my knowledge on the ground goes, extremely small. As to the figures of the value of the existing mains of the Company as stated in the Company's last report, it is my opinion that said figures are a very full statement of the value of such mains. The mains of the Company have been in the ground most of them for forty-five or fifty years and are as rotten as gas mains can be and still be in service. In digging up I find them of all sizes and in some places different sizes jumbled together, and laid without any apparent plan, so that they are much more expensive to the Company in use than mains properly laid. Besides this a large part

of them are three-inch mains and under, which in present conduct of the gas business are obsolete and have been for at least fifteen or twenty years.

(Signed) CHARLES G. M. THOMAS.

Sworn to before me this 26th day of March, 1921.

FREDERICK EAGLE,
Notary Public.

3027 Received Mar. 18, 1902. State Board of Tax Commissioners, Albany, N. Y.

In the Matter of the Application of the NEWTOWN AND FLUSHING Gas Company for the reduction of the Assessment on Its "Special Franchises" for the Year 1902.

CITY AND COUNTY OF NEW YORK, *ss:*

Henry R. Wilson, being duly sworn says:

I am the Vice-President of the Newtown and Flushing Gas Company, and apply for a reduction of the assessment of special franchises of said company for the year 1902 at the sum of $58,150 on the following separate grounds:

1. That the act and amendments thereof imposing a tax on such special franchises is and are in toto unconstitutional and invalid.

2. That the provision of said acts authorizing and empowering this board to assess the value of such special franchises are unconstitutional and invalid.

3. That the assessment above mentioned is excessive.

In the year 1901 said special franchises were owned in part by said Newtown and Flushing Gas Company and in part by the College Point Gas Company, said College Point Gas Company having been merged into said Newtown and Flushing Gas Company in or about March, 1901.

Such special franchises for said year 1901 were assessed by this Board as follows:

Newtown and Flushing Gas Company	$39,000.
College Point Gas Company	9,900.
Total	$48,900.

3028 There has been no change in the character, amount or value of said "special franchises" since the second Monday of January, 1901; except that the mains, fixtures and other tangible property in the street included therein have increased in value in the aggregate (as shown by the Newtown and Flushing Gas Company's report last heretofore submitted from $19,177.05 to $20,-

015.89, to wit: by the sum of $838.84, and this added to the assessment of said special franchises for the year 1901, to wit: $48,900 makes the total value of said special franchises at present (assuming the assessment for 1901 to be correct) $49,738.84.

The condition of the mains of the Newtown and Flushing Company (including those formerly of the College Point Gas Company) has been set out in papers filed with the commission; and I refer to and repeat the allegations of said papers as part of this application.

Said Newtown and Flushing Company applies for the entire cancellation of said assessments on the first two grounds above stated; and separately by reason of the facts hereinbefore set forth and referred to said company applies for the reduction of said assessment to not exceeding the sum of $49,738.84, if it shall not be wholly canceled. Deponent urges on information, belief and the best investigation that he is able to make, that the present value of such "special franchises" does not exceed at the outside said sum of $49,738.84.

(Signed) HENRY R. WILSON.

Sworn to before me, this 17th day of March, 1902.

WILLIAM C. RADEN,
Notary Public, #5, *N. Y. Co., N. Y.*

3029 Received Feb. 18th, 1903. State Board of Tax Commissioners, Albany, N. Y.

In the Matter of the Assessment of the NEWTOWN AND FLUSHING GAS COMPANY on Special Franchises for the Year 1903.

COUNTY OF NEW YORK, *ss.*:

Charles Thomas, being duly sworn, says: that he is Vice-President and General Manager of the Newtown and Flushing Gas Company and that in behalf of said company he makes application for the cancellation of the assessment of $80,000 heretofore notified to said Company on the following separate grounds:

1. That the provisions of statute under which said assessment has been made are unconstitutional and invalid.

2. That the State Board of Tax Commissioners had and has no legal or constitutional power to make said assessment.

3. That said assessment is excessive on the facts now and heretofore presented to the State Board of Tax Commissioners, and higher proportionately than that of other property on the same roll made by the same officers.

There has been no substantial increase in the value of the tangible property of the company within the street limits and included in the definition of "Special Franchises" since the assessment of 1902; nor has there been any increase whatever in the value of the intangible

franchises of the company since the assessment of 1902. On the contrary doubt has been thrown on the validity of the company's franchises in the streets for the entire Second Ward (former
3030 Town of Newtown) and a considerable part of the Third Ward (former Town of Flushing) of the Borough of Queens, comprising altogether about three-fourths of the entire territory covered by the franchises claimed by this Company; the Corporation Counsel of the City of New York having declined to give an opinion that the franchises from the Board of Highway Commissioners, such as are held by this Company, are valid, without concurrence of other municipal officers.

Deponent respectfully submits that in these circumstances said franchises should not be in any event considered, or certainly not considered at a full and certain value.

Deponent also shows that while the company has made considerable increases in its reconstruction account, said reconstruction is chiefly of operating plant outside of the streets; and that the small amount expended for new construction and reconstruction within the street lines is largely offset by the continued depreciation of the old pipes and plant of the constituent companies which the Newtown and Flushing Gas Company succeeded, which were both incorporated nearly fifty years ago, and whose pipes were largely of obsolete sizes, rotten, and constantly giving out.

Deponent believes that the assessed value of the special franchises, tangible and intangible, should not, therefore, exceed that for the year 1902, even should objections "1," and "2," above be overruled by the Board.

(Signed):

CHARLES THOMAS.

Sworn to before me this 17th day of February, 1903.

FREDERICK EAGLE,
Notary Public, New York County.

3031 Received Mar. 8, 1904. State Board of Tax Commissioners, Albany, N. Y.

State Board of Tax Commissioners.

In the Matter of the Assessment of the NEWTOWN AND FLUSHING GAS COMPANY for the Year 1904.

STATE OF NEW YORK,
City and County of New York, ss:

Charles Thomas, being duly sworn, says: I am Vice-President and General Manager of the Newtown and Flushing Gas Company.

Said company operates in the Third Ward of the Borough of Queens, to wit: the territory formerly known as the Town of Flushing.

The assessment against the Company by the Commissioners for

1903 was $75,000; while for 1904 it is fixed at $104,500, being a
increase of nearly fifty per cent. The increase from 1902 to 190
was also nearly fifty per cent; so that the present assessment is pra
tically double that of two years ago.

As to the financial condition of the company it will be observe
that the last report before the one under consideration, showed
surplus of $17,225.40; while the present report shows a surplus o
only $1,296.09 for the year, after payment of $3,000 in dividend
The payment of dividends does not, therefore, necessarily indica
an improved financial condition. Theretofore earnings were used fo
construction.

3032 It will be observed that on November 1st, 1902, the feet o
main in the streets was specified as 204,203; and on the firs
day of November, 1903, as 211,445. The increase of property in th
streets is therefore insignificant. Further than this, the Compan
has discovered that about 14,000 feet of its mains heretofore report
as within a public street are located in tracts recently improved whi
are not public streets, having never been either dedicated or co
demned for this purpose. This is more than double the amount o
increased mileage between the last two reports; and while I cann
state in detail at the moment, I have ascertained that there are othe
locations of the same character where our mains are not in publ
streets. Furthermore, as stated in previous affidavits a large propo
tion of the company's mains are of great age, some of them runnin
back some fifty years, and they are constantly and increasingl
deteriorating in value from year to year.

Furthermore, within the last year the company has completed
new production plant at large expense, which has necessarily im
proved to that extent the economy of manufacture of the company
product. This naturally has a beneficial effect upon the company
finances, but it will at once be seen that such effect is not due to a
increase in the company's franchises in public streets, tangible o
intangible.

Indeed, the local assessment of the company's plant outside o
the street between 1902 and 1903, was increased seventy-five per ce
on account of these very improvements, and an increase of the asse
ment of the company's franchises by reason of results flowing fro
such improvements would amount to a double taxation.

It is to be noted that the company is not operating in th
3033 entire Borough of Queens, but only in a small part of th
Third Ward of said Borough. Said Ward altogether do
not occupy more than about one-fourth of the total area of sa
Borough. In said Third Ward the population is less dense than i
any other part of the greater City of New York; and gas is made an
furnished from our own generators, while in most of the rest of th
Borough of Queens gas is furnished from tanks of larger compani
supplying a dense population in other parts of the City.

The company respectfully contends, therefore, that its assessme
should not be increased over last year, which the company consider
an excessive increase at that time over the previous years.

CHARLES THOMAS

efore me this 7th day of March, 1904.

J. FREDERICK EAGLE,
Notary Public, New York County.

ed Mar. 15, 1905. State Board of Tax Commissioners, Albany, N. Y.

State Board of Tax Commissioners.

of the Special Franchise Assessment of the NEW YORK AND QUEENS GAS COMPANY.

omas, being duly sworn, says that he is the Vice Presi-neral Manager of the New York and Queens Gas Com-Company operates only in the Third Ward of the Bor-ens, to wit, the territory formerly known as the town and owns no franchises or property other than those ned and reported by the Newtown and Flushing Gas hich was merged into the New York and Queens Gas July, 1904.

l franchise assessment against the Company for 1904 while for 1905 it is assessed at $110,000., an increase In 1902 it was $54,000., so that in two years the State essors has increased the assessment of the Company's ise about 105%, although its franchises are absolutely hey were in 1902. As will appear in the reports filed value of property in streets, highways and public places ost of reproduction was $52,912.48, and allowing for was $20,826.77, whereas in 1904 the present value on f reproduction was $60,047. and allowing for depreciа-829.

ear by all of the Company's reports that the Company arging its manufacturing plant rather than increasing of its property in the streets, highways and public so that any betterment which may appear in the ny's financial condition is due not to the enlarge-of its franchises, but to improving, modernizing and plant.

ear from the two last reports filed, the gross receipts $118,532.38 whereas for 1904 the gross receipts were 0.91. In 1903, the amount received from actual opera-964.98, whereas in 1904 it was $97,744.64, or an in-$5,000. This increase from actual operation is not ncreased franchises, but to the perfecting of its plant. for the increase in the surplus and dividends for the horoughly explained by "Schedule G" on the 9th page . In 1903 the Company paid for maintenance $12,-for reconstruction $14,792. making a total of $26,-eas in 1904 the total paid for said items was but owing that in 1903 there was expended for mainte-construction $24,540.30 more than in 1904. It is refore, that in 1903 instead of paying dividends upon tock and accumulating surplus the Company expended

funds upon reconstruction and improving its system, which funds would otherwise have been applicable to dividends and surplus. In 1904 the Company was assessed on the reconstruction and improvement of 1903 as aforesaid, and the fact that it did not expend so large an item in 1904 as in 1903 for maintenance and reconstruction cannot, of course, be considered an increase in the value of the Company's franchises.

Many of the streets in the Third Ward of the Borough of Queens are owned by the abutting property owners, and have never been dedicated or taken by the City, and the Commissioners of Taxes of the City of New York are now taxing the property in such undedicated streets as "Real Estate of Corporations". This Company pays in its Special Franchise Report has always reported the property in such undedicated streets as though it were property taxable under its special franchises, but in view of the action of the Local Assessors, should the State Board of Tax Commissioners assess such property it will result in double taxation.

It should be noted that the Company is not operating in the entire Borough of Queens but only in a small part of the Third Ward of the Borough. Said Ward altogether does not occupy more than one quarter of the total area of said Borough. In said Third Ward the population is less dense than in any part of the City of New York, and the Company furnishes and makes its gas in its own generators while in most of the rest of the Borough of Queens gas is furnished from the tanks of other Companies supplying a vast amount to the population of the rest of the City.

As stated in previous affidavits and reports, a large proportion of the Company's mains are of great age, some of them running back some fifty years, and they are constantly and increasingly deteriorating in value from year to year.

It should be borne in mind that the earning capacity of the Company has been increased by reason of the construction, reconstruction and now construction both upon private property and in streets highways and public places, and that the Company having been assessed in previous years upon such construction in the streets, highways and public places any increased assessment on account of increased earnings by reason of such construction would result in double taxation, first upon the construction itself, and secondly upon the natural result thereof, to wit, increased earnings.

In view of the above facts the Company contends that the 3037 assessment of its Special Franchises should not be increased over last year, which the Company considered an excessive increase at that time over previous years.

(Signed) CHARLES THOMAS

Sworn to before me this 14th day of March, 1905.

THOMAS ROBINSON,

The Supreme Court of the United States.

CHARLES D. NEWTON, as Attorney-General of the State of New York; ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York, for the First District; and DANA WALLACE, as District Attorney of Queens County,

Defendants-Appellants,

vs.

NEW YORK & QUEENS GAS COMPANY,

Complainant-Respondent.

Sirs,

PLEASE TAKE NOTICE that we will move the Supreme Court of the United States at Washington, District of Columbia, pursuant to Rule 26 of the Rules of the Supreme Court of the United States, on Tuesday, April 12, 1921, at twelve o'clock noon at the opening of said court for motions, or as soon thereafter as counsel can be heard, for an order advancing the above entitled appeal on the docket of said court for argument at the earliest particular

date during the October Term, 1921, convenient to the court.

Dated, New York, April 4, 1921.

Yours, &c.,

WILBER W. CHAMBERS,
Solicitor for Deft.-Appllt. Newton,
Office and P. O. Address:
Capitol, Albany, N. Y.

TERENCE FARLEY,
Solicitor for Deft.-Appllt. Barrett,
Office and P. O. Address:
No. 49 Lafayette Street,
New York City.

JOHN P. O'BRIEN,
Corporation Counsel,
Solicitor for Deft.-Appllt. Lewis,
Office and P. O. Address:
Municipal Building,
New York City.

To:

SHEARMAN & STERLING,
Solicitors for Complainant-Respondent,
55 Wall St., Borough of Manhattan,
New York City.

THE SUPREME COURT OF THE UNITED STATES.

CHARLES D. NEWTON, as Attorney-General of the State of New York; ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York, for the First District; and DANA WALLACE, as District Attorney of Queens County,
Defendants-Appellants,

vs.

NEW YORK & QUEENS GAS COMPANY,
Complainant-Respondent.

To the Honorable the Supreme Court of the United States:

1. The appellants above named respectfully move to advance this cause on the docket of this Honorable Court pursuant to Rule 26 of the Rules of the Supreme Court of the United States.

2. The above entitled appeal was brought by the appellants to review the final decree of the District Court of the United States for the Southern District of New York, dated the 19th day of November, 1920, adjudging chapter 125 of the Laws of 1906 of the State of New York confiscatory and unconstitutional in that it deprives complainant-respondent of its property without due process of law, contrary to the Fourteenth Amendment of the United States Constitution. The laws of the State of New York referred to, provided, among other things, that the complainant company shall not charge or receive for gas manufactured, furnished

or sold by it a sum in excess of one dollar ($1.00) per thousand cubic feet.

3. The final decree appealed from contains a provision that the appellants perfect their appeal with "all convenient speed" and apply to the Supreme Court of the United States to advance the said appeal as follows:

> "XI. The plaintiff shall be required to do the acts and things specified in Paragraphs VI, VII, VIII and IX hereof only in case an appeal from this decree is taken by the defendants, or any of them, within thirty (30) days from the entry of this decree, and that the defendants so appealing, and each of them, shall perfect and prosecute any such appeal and print and file the record and all necessary papers to that end, promptly and without delay, and shall, with all convenient speed thereafter, serve a notice of application to the United States Supreme Court to advance the said appeal upon the calendar of the said Court."

4. The complainant company is now charging and collecting the sum of $1.25 per thousand cubic feet and has been charging and collecting this rate from its consumers since shortly after the entry of the final decree hereinbefore referred to, and in addition the said complainant company is charging and collecting a service charge in the amount of $.75 per month from each consumer.

5. The final decree appealed from further provided as follows:

> "III. Chapter 125 of the laws of 1906 of the State of New York, in so far as it prohibits the plaintiff from charging or receiving more than at the rate of One Dollar ($1.00) per thousand cubic feet for the sale of gas in the Third Ward of the Borough of Queens, has been, since at

least January 1, 1919, and now is, confiscatory, and deprives the plaintiff of its property without due process of law, contrary to Section 10 of Article 1 of the Constitution of the United States and to the Fourteenth Amendment thereof.

"IV. The said statute has been since at least January 1, 1919, and now is, invalid as violative of the said provisions of the Constitution of the United States; except by injunction the plaintiff has no adequate remedy, at law or otherwise, for any injury resulting from the enforcement of said statute; and the plaintiff is entitled to the relief hereinafter prescribed.

"V. The defendants Charles D. Newton as Attorney-General of the State of New York, Dennis O'Leary as District Attorney of the County of Queens, State of New York, and Lewis Nixon constituting the Public Service Commission of the State of New York for the First District, and each of them, and their, and each of their successors in office, their deputies and attorneys, and their, and each of their successors, servants, and employees, and any and every person acting or purporting to act under and by virtue of the authority of Chapter 125 of the Laws of 1906 of the State of New York or any other provision of law, be, and each of them is, hereby restrained and enjoined from enforcing, and from attempting to enforce, against the plaintiff the provisions of Chapter 125 of the Laws of 1906 or any of them, with respect to the rates which the plaintiff may charge or receive for gas manufactured or sold by it in the Third Ward of the Borough of Queens, or from bringing any action or proceedings in mandamus or by injunction or otherwise for the purpose of compelling compliance by the plaintiff with the said Act, in so far as it fixes or prescribes a rate for gas manufactured or sold by the plaintiff, or from doing any act or thing interfering with the

right or authority of the plaintiff forthwith to charge, bill, collect and receive for such gas any rate which it might lawfully charge or receive if the provisions of the said Act relative to the rate to be charged or received by the plaintiff were not operative.

"VI. In the event that an appeal from this decree is taken by the defendants, or any of them, within the time hereinafter prescribed, the plaintiff shall thereafter and until the bond provided for in Paragraph VIII hereof shall have been cancelled and annulled by order of this Court, keep true and correct accounts and records of all gas sold by it and of all moneys received by it for gas sold by it, so as accurately and completely to show the moneys received by it, for gas sold by it from and after this date, in excess of the sums which would have been received for such gas if the same had been sold at the rate of One Dollar ($1.00) per thousand cubic feet of gas sold, together with the names and addresses of the consumers from whom such moneys are so collected in so far as such names or addresses are known to the plaintiff or appear upon its books and records; and such accounts and records shall, upon application to this Court, be at all reasonable times open to the inspection and audit of the defendants, their employees, or their successors or representatives.

"VII. If, within the time hereinafter prescribed, an appeal from this decree is taken by the defendants, or any of them, the plaintiff, shall, on the 15th day of December, 1920, and on the 15th day of each month thereafter, until the bond provided for in Paragraph VIII hereof shall have been cancelled and annulled or until this Court shall order otherwise, file in the office of the Clerk of this Court a statement, sworn to by its vice-president, secretary or treasurer, showing the money received by it during the preceding month, for gas sold by

it, in excess of the sums which would have been received for such gas if the same had been sold at the rate of One Dollar ($1.00) per thousand cubic feet, such verified statement also to certify that the sum so shown is all that has been so collected during the preceding month.

"VIII. If, within the time hereinafter prescribed, an appeal from this decree is taken by the defendants, or any of them, within ten days thereafter, the plaintiff shall file with the Clerk of this Court, in form and tenor first approved by this Court, its bond or undertaking, with the Consolidated Gas Company of New York as surety, in the sum hereinafter prescribed, conditioned for the repayment to the consumers of the plaintiff, in the event that this decree is reversed on appeal and it is ultimately decided that the plaintiff is not entitled to judgment in this action, of the respective sums of money received and collected by the plaintiff from such consumers in excess of the sums which would have been received if such gas had been sold and billed at the rate of One Dollar ($1.00) per thousand cubic feet, together with interest at the rate of six (6) per cent., upon any such excess so collected and repaid, the obligation of such surety upon and under such bond or undertaking to be in the sum of Two Hundred Thousand Dollars ($200,000).

"IX. Upon filing such bond and thereafter, unless and until this Court shall otherwise direct, the plaintiff shall be entitled to and may retain and use any and all moneys received and collected by it in excess of the sums which would have been received and collected at the said rate of One Dollar ($1.00) per thousand cubic feet of gas sold. When the excess moneys so received and collected shall aggregate the sum of Two Hundred Thousand Dollars ($200,000) the defendants, or any of them, may make application to this Court, on three days' notice,

for an additional bond or security and in such form and manner as this Court may direct.

"X. If an appeal from this decree is taken by the defendants, or any of them, and the final judgment entered herein sustains the invalidity of Chapter 125 of the Laws of 1906 as to the plaintiff, the said bond or undertaking shall thereupon and thereby be cancelled or annulled, and the plaintiff and the said Consolidated Gas Company of New York shall thereupon and thereby be relieved from any and all liability thereunder, and appropriate directions accordingly shall be made by this Court."

6. The complainant company serves approximately 11,000 individual consumers in the Borough of Queens, State of New York. There is no adequate remedy for the individual consumer who must pay $1.25 rate, plus the $.75 service charge, or submit to having his gas supply cut off. Litigation by an individual consumer with the complainant company can be prosecuted only at so great expense as to become prohibitive. The number of citizens interested in this litigation as well as the amount involved is unusually large.

7. This is the third case in which an appeal has been taken to this Honorable Court from a final decree adjudging gas rates fixed by the legislature of the State of New York confiscatory and unconstitutional. This Honorable Court granted a motion made on behalf of the appellants to advance the Consolidated Gas Company case and set the said case down for argument on the 10th of October, 1921. In the case of Charles D. Newton, as Attorney-General of the State of New York, *et al.*, against The Kings County Lighting Company, the appellants are moving to advance the said case upon the docket of this Honorable Court. Practi-

cally all of the reasons given for the advancement of the Consolidated Gas Company case and the Kings County Lighting Company case are equally applicable to the instant application.

WHEREFORE, your petitioners ask this Honorable Court for an order or direction advancing the above-entitled appeal on the docket of the said court for argument at some date convenient to this court during the October Term, 1921.

Dated, April 4, 1921.

CHARLES S. HOUSTON, as Executive Director of the Public Service Commission of the State of New York, Petitioner,

vs.

NEW YORK AND QUEENS GAS COMPANY, Respondent.

MOTION FOR REASSIGNMENT AND AFFIDAVIT

JOHN J. CARVIN,
Counsel for Petitioner,
61 Broadway,
New York City.

Supreme Court of the United States,

OCTOBER TERM, 1921.

CHARLES D. NEWTON, as Attorney General of the State of New York, and ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York, First District, Appellants, AGAINST NEW YORK AND QUEENS GAS COMPANY, Respondent.	No. 296.

TAKE NOTICE, that on October 4, 1921, at the opening of court on that day, in the Supreme Court Room, Washington, D. C., the respondent will move this Court, on the records of the above named case, the annexed affidavit of Charles A. Vilas and on all the proceedings had in said case, for an order reassigning said case for argument upon November 14, 1921, or such other date as may suit the convenience of the court, for the reason that appellants have failed to serve their brief upon

the Appellee as required by Rule 22 of the rules of this court and to enable the case to be heard with other cases involving the same principle; and for such other and further relief as to the Court shall seem just and proper.

New York, September 24, 1921.

JOHN A. GARVER,
Counsel for Respondent,
55 Wall Street,
New York City.

To:

WILBER W. CHAMBERS, Esq.,
Counsel for Appellant Newton.

JOHN P. O'BRIEN, Esq., Corporation Counsel,
Counsel for Appellant Wallace.

SUPREME COURT OF UNITED STATES.

OCTOBER TERM, 1921.

CHARLES D. NEWTON, Attorney-General of the State of New York and ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York for the First District,

Appellants,

AGAINST

NEW YORK AND QUEENS GAS COMPANY,

Respondent.

No. 296.

Affidavit of Charles A. Vilas.

STATE OF NEW YORK }
County of New York } :

CHARLES A. VILAS, being duly sworn says:

1. I am an attorney-at-law, associated with the firm of Shearman & Sterling, solicitors for the respondent in the above entitled cause, and I am familiar with all the proceedings which have been had in this suit.

2. This appeal is by the defendants from a decree of the District Court of the United States for the Southern District of New York, dated November 19, 1920, adjudging confiscatory and void Chapter 125 of the Laws of New York for 1906, which limited the rate to be charged for gas in the third ward of the Borough of Queens, City of New York, to $1.00 per thousand cubic feet.

3. This case was advanced for argument and set for October 10, 1921, by order of this Court made April 18, 1921, upon motion of the appellants. The case is the sixteenth case on the call of this Court for that day. The record in this case is in four volumes, and comprises 1,880 pages. The issues involved are similar to those involved in case No. 257, Newton, Attorney-General, *et al. v.* Consolidated Gas Company, and case No. 295, Newton, Attorney-General, *et al. v.* Kings County Lighting Company; all of said cases involving the provisions of the statute of the State of New York, limiting the rate to be charged for gas in various portions of the City of New York. A motion to consolidate cases 257, 258 and 259 and to reset said cases for another date, is presented concurrently herewith.

4. I am informed and believe that it is the intention of the solicitor for the appellant Attorney-General and of the solicitor for the appellant Dana Wallace, who has been substituted as District Attorney of the County of Queens as a defendant, to file separate briefs in this suit. Neither of said parties has served any brief on behalf of either of the appellants in this case upon the solicitors for the respondent. The appellants have filed sixty-five assignments of error in this suit; and it is impossible for solicitors for respondent to determine in advance of receipt of appellants' brief what assignments of error appellants intend to rely upon, or to prepare a brief on behalf of respondent. In view of the size of the record and the probable size of the briefs to be filed by appellants, and the magnitude and importance of the questions involved, counsel for appellee will require the full time

allowed by the rules of this Court in which to serve briefs in reply to the points to be made the appellants.

WHEREFORE, the respondent moves the Court to reassign this case for argument on November 14, or on such day as the court shall set for the argument of Nos. 257, 258 and 288; and for such other and further relief as to the court shall seem just and proper.

Sworn to before me this 24th day of September, 1921.

Charles A. Vilas

INDEX TO POINTS

I PAGE

Respondent earned more than a fair return while operating under the statutory rate from the time of its enactment in 1906, to 1918, inclusive 8

II

The statute in question should not be tested upon the financial results obtained in the abnormal year of 1919, but the court should take into consideration the period from the time the statute was enacted in 1906 to 1919, inclusive, for respondent alleged in its bill of complaint confiscation during this period 14

III

Respondent has accumulated a fund amounting to $401,-149.66 as a contingency reserve. The statute should not be declared confiscatory until this fund is exhausted. Temporary losses due to abnormal conditions, like any other hazards of business, should be debited against it ... 33

IV

Respondent earned a fair return in the year 1919 40

V

The court below erred in failing to follow the rules laid down by this court that in determining the fair value of respondent's property, depreciation should be deducted... 62

VI

Working and constructive capital, organization and undistributable structural items, generally called "overheads," are less than $100,000 74

VII

The fair value of respondent's property devoted to the making and distributing of gas and upon which it is entitled to a fair return, does not exceed the following amounts for the respective years 88

VIII

The master erred repeatedly in the admission and exclusion of evidence which errors were not corrected by the court below 98

IX

The rate of return which a public utility was entitled to enjoy, as determined by the courts in normal pre-war times, is not decisive or controlling in the abnormal war period 107

X

For the reasons assigned in the foregoing points the decree appealed from should be reversed and the bill of complaint dismissed, with costs 109

SUPREME COURT OF THE UNITED STATES

CHARLES D. NEWTON, as Attorney-General of the State of New York; DENIS O'LEARY, as District Attorney of the County of Queens, State of New York; ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York, for the First District, *Appellants*, *against* NEW YORK AND QUEENS GAS COMPANY, *Respondent*.	296 October Term, 1921	2 3 4

BRIEF ON BEHALF OF APPELLANT, CHARLES D. NEWTON AS ATTORNEY-GENERAL OF THE STATE OF NEW YORK.

This is an appeal by the above named appellants from a decree of the United States District Court, Southern District of New York (Hon. Julius M. Mayer, District Judge, presiding), entered in the office of the said Court on November 19, 1920, 5

6 which decree enjoined and restrained the appellants, public officials of the State of New York, from enforcing the provisions of chapter 125 of the laws of 1906, which fixed the price of gas at $1.00 sold to the inhabitants of the Third ward of the Borough of Queens, commonly known as Flushing and its environs.

7 The issues in this case were by order dated May 23, 1919, made by Hon. Julius M. Mayer, District Judge of the United States, Southern District of New York, referred to Abraham S. Gilbert, Esq., of New York city, to take the testimony and report to the Court (p. 25).

The Special Master rendered his report on
8 July 16, 1920 (p. 45).

The report of the Master came before Hon. Julius M. Mayer for review.

The opinion of the learned Judge is reported in *New York and Queens Gas Co.* v. *McCall et al.*, 269 Federal Reporter 277. By reference to the opinion it will be seen that the Court found that
9 it cost the respondent, during the year 1919, $1,0129, or 1.29 cents in excess of the statutory rate, to make and deliver gas to the consumer (p. 112).

The Court below also found that "the actual cost of the tangible property aggregates $1,130,497.08 (p. 115) and then found that sum of $1,130,-
10 497.08 "as the smallest amount upon which a return should be figured." The Court below thus accepted as a valuation the actual cost of the tangible property as shown by the books of respondent, *without any deduction for depreciation.*

THE ISSUES IN THE CASE

This action was brought on April 7, 1919, to have declared unconstitutional and void *chapter 125 of the Laws of 1906*, upon the ground that said statute was in contravention of *section 10, article 1, of the constitution of the United States* and the Fourteenth Amendment thereof.

The bill of complaint alleges (paragraph XIV, p. 6):

> "During no year since its organization in 1904, have the earnings of your orator been sufficient to provide a return of as much as six per cent upon the reasonable value of its property devoted to the public use."

It further alleges (paragraph XVI, p. 7):

> "The maximum price of one dollar per thousand cubic feet for gas, fixed by the said Act of 1906, has been, is and will continue to be wholly inadequate, in that it does not permit your orator to earn a reasonable return upon the fair value of its property devoted to the public use; and in fixing the said maximum price the said Act of 1906 has impaired, now impairs, and will continue to impair the obligation of your orator's contract with the State of New York, in violation of Section 10, Article 1, of the Constitution of the United States, and has deprived, now deprives and will continue to deprive your orator of its property without due process of law, and has denied, now denies and will continue to deny it the equal protection of the laws, in violation of the provisions of the Fourteenth Amendment to the said Constitution."

It will be noted from the quotation above that respondent in its bill of complaint, which was never amended, that in no year since 1904 have

16 the earnings been sufficient to provide a return of 6 per cent.

The answer of the Attorney-General and other appellants denied all the material allegations in the bill of complaint.

HISTORY OF THE RESPONDENT

17 The respondent is a domestic corporation, organized under the Transportation Corporations Law, State of New York, on July 12, 1904, for the purpose, among other things of manufacturing and supplying gas for lighting the streets, public places and private buildings in the city of New York. It operates a water gas plant located in the former village of Flushing, in the third ward
18 of the Borough of Queens, city of New York, where it supplies gas to about 11,000 consumers. It is the only company furnishing gas within the territory described.

All of the stock of respondent, except qualifying shares, is owned by the Consolidated Gas Company of the city of New York.

19 The facts will be discussed under the various points.

We shall ask the court to reverse the decree appealed from and dismiss the bill of complaint upon the following grounds:

1. Respondent earned more than a fair return while operating under the statutory rate from the
20 time of its enactment in 1906 to 1918, inclusive.

2. The statute in question should not be tested upon the financial results obtained in the abnormal year of 1919, but the court should take into consideration the period from the time the statute

was enacted in 1906 to 1919, inclusive, for re- 21
spondent alleged in its bill of complaint confiscation during this period.

3. Respondent has accumulated a fund amounting to $101,149.66, as a contingency reserve. This was built up from payments made by consumers for gas furnished them in prior years. The statute should not be declared confiscatory until 22
this fund is exhausted. Temporary losses due to abnormal conditions like any other hazards of business, should be debited against it.

4. Respondent earned a fair return for the year 1919.

5. Working and construction capital, organization and structural items, generally called "overhead" are less than $100,000. 23

6. The court below erred in failing to follow the rule laid down by this court in determining the fair value of respondent's property, depreciation should be deducted.

7. The fair value of respondent's property devoted to making and distributing gas does not exceed $898,545 for 1919, and does not exceed the 24
amounts set forth in Point —, for the years 1906 to 1918, inclusive.

8. The Master committed reversible errors in the admission and exclusion of evidence which errors were not corrected in the court below.

9. The rate of return which a public utility is entitled to enjoy as determined by the courts in 25
normal pre-war times is not decisive or controlling in the abnormal war period.

26

POINT I

RESPONDENT EARNED MORE THAN A FAIR RETURN WHILE OPERATING UNDER THE STATUTORY RATE FROM THE TIME OF ITS ENACTMENT IN 1906 TO 1918 INCLUSIVE.

27 Appellants contend that when a State statute is attacked on the ground that it is confiscatory, as in the instant case, that the earnings, as shown by the practical experience of the company, of all the years, or a period of reasonable length, should be reviewed by the Court and that a fair average return should thus be determined and is decisive of the question in this case.

28 In accordance with this contention, the appellants on the trial offered in evidence Exhibit A11 (p. 2810) and Exhibit A12 (p. 2811), showing the revenues and expenses of the respondent from August 1, 1904, the time of its organization to December 1, 1919.

29 The exhibits above referred to show the operating income, or excess of revenue over expenses, for the period as follows:

Year ended	Operating income
July 31, 1906	$38,411 13
July 31, 1907	33,733 45
July 31, 1908	50,464 03
Five months ending Dec. 31, 1908	27,462 65
30 December 31, 1909	59,370 88
December 31, 1910	66,537 04
December 31, 1911	60,162 14
December 31, 1912	70,187 60
December 31, 1913	64,385 62
December 31, 1914	62,475 00
December 31, 1915	76,467 96

Year ended	Operating income
December 31, 1916.....	$80,884 26
December 31, 1917.....	56,736 70
December 31, 1918.....	33,350 56

(Ex. A11, p. 2810; A12, p. 2811).

The exhibits above referred to were compiled from the books of respondent by Mr. Cohen, a statistician of the Public Service Commission of the State of New York (p. 995-6).

The operating expenses as shown on these exhibits include for all these years many items properly deductible in a confiscatory case, as interest on unpaid taxes, Federal income tax, tax on bondholders income, rate case expense and others.

These items have been found by the Court below to be properly deductible for the year 1919, the only year reviewed by the Court in the instant case.

The learned Court below found no rate base or valuation of respondent's property, other than for the year 1919. The rate base so found was $1,130,497.08 (p. 115).

The appellants, however, introduced proof of a fair valuation of respondent's tangible and intangible property, for the period from July 31, 1906, to December 31, 1909. This valuation was determined by Willard F. Hine, a public utility engineer of wide experience and formerly the chief gas engineer of the Public Service Commission of the State of New York, First District.

While in the employ of that Commission, Mr. Hine made most of the valuations for that well known and important Commission for use in the rate inquiries and other matters coming before it.

36 Mr. Hine showed that the fair value of respondent's property does not exceed the following average amounts for these years.

December 31, 1906.....	$402,711
December 31, 1907.....	434,253
December 31, 1908.....	467,593
December 31, 1909.....	503,170
37 December 31, 1910.....	536,825
December 31, 1911.....	581,825
December 31, 1912.....	615,422
December 31, 1913.....	639,099
December 31, 1914.....	672,432
December 31, 1915.....	751,775
December 31, 1916.....	831,868
38 December 31, 1917.....	867,872
December 31, 1918.....	871,875

How the foregoing table is made up is fully discussed under a later point. Suffice it to say here that the average fixed capital, including engineering and exclusive of land, is taken from defend-
39 ant's Exhibit A109, p. 1877, corrected by deducting for each year the sum of $33,444, a typographical error made in addition on the aforesaid table. (See pp. 1332 and 1333.) That is to say instead of correcting the table as printed in the record, it is corrected by the testimony above referred to the extent indicated.

The foregoing fair value of respondent's prop-
40 erty for each of the years beginning in 1906, to December 31, 1918, stands uncontradicted, and there is no evidence save this, of any fair value of respondent's property during those years.

The following table sets forth the operating income, as shown by the company's books and

above referred to and the average rate base as 41
determined by Mr. Hine also referred to above,
during these years.

It shows clearly that the respondent enjoyed a return of 9½ per cent on the fair value of its property during the years 1906 to 1918, inclusive, and in addition thereto set aside out of these earnings a "contingency" fund amounting to 42
$101,149.66 (Ex. A9, p. 2808). This contingency fund is discussed under a separate point.

In this table we have included all the land used and useful at cost. This cost of the real estate is fully discussed in a later point. It amounts to the following:

43
1906 to 1908, inclusive, $19,423;
1909–1910, inclusive, $20,623;
1911, $26,524.25;
1912, 1913 and 1914, $27,652.25;
1915–1916, inclusive, $40,049.64; and in
1917–1918, $40,053.90. (Exhibit 96, 1606–1607.)

It will readily be seen, therefore, that the alle- 44
gation in the complaint of confiscation during this period was disapproved, and in addition it is manifest from this proof that respondent made considerable more than a fair return and created in addition thereto a tidy sum with which to take care of emergency or lean years when earnings might fall off.

We have already called attention above to the 45
fact that there has been no attempt in this table to exclude improper items, such as (a) interest on unpaid taxes, (b) federal income tax, (c) tax on bondholders' income, (d) rate case expenses, and many others. When these are deducted the re-

turn during this period will be increased accordingly.

We contend that this lucrative period in the company's business under the rate complained of should be considered with the year of 1919, and that with such a showing as this the statute ought not to be declared confiscatory, even though the earnings in 1919 decreased. And accordingly, in the following point we argue fully that the proper period to take would be 1906 to the end of 1919.

Table showing return enjoyed by respondent in years 1906–1918 inclusive without deducting improper items.

YEAR	Operating income	Average rate base	Six per cent on average rate base	Excess of respondent's income over 6 per cent on average rate base	Per cent of return of respondent's income on average rate base
Ju'y 31, 1906	$38,411 13	$402,711 00	$24,162 66	$14,248 47	9.5
July 31, 1907	33,733 45	434,253 00	26,055 18	7,678 27	7.8
December 31, 1908 (*a*)	77,926 68	467,593 00	28,055 58	49,871 10	16.7
December 31 1909	59,370 88	503,470 00	30,208 20	29,162,68	11.7
December 31, 1910	66,537 04	536,825 00	32,209 50	34,327 54	12.4
December 31, 1911	60,162 14	584,825 00	35,089 50	25,072 64	10.3
December 31, 1912	70,187 60	615,422 00	36,925 32	33,261 28	11.4
December 31, 1913	64,385 62	639,099 00	38,345 94	26,039 68	10.1
December 31, 1914	62,475 00	672,132 00	40,327 92	22,147 08	9.3
December 31 1915	76,467 96	751,773 00	45,106 38	31,361 58	10.1
December 31, 1916	80,884 26	831,868 00	49,912 08	30,972 18	9.7
December 31, 1917	56,736 70	867,872 00	52,072 32	4,664 38	6.5
December 31, 1918	33,350 56	871,875 00	52,312 50	*b*18,961 94	3.8
	$780,629 02	$8,179,718 00	$490,783 08	$289 845 94	9.5

(*a*) From August 1, 1907, to December 31, 1908. (Ex. a11, p. 2810; a12, p. 2811)
(*b*) This year return less than 6 per cent, but same includes improper items.

POINT II

THE STATUTE IN QUESTION SHOULD NOT BE TESTED UPON THE FINANCIAL RESULTS OBTAINED IN THE ABNORMAL YEAR OF 1919, BUT THE COURT SHOULD TAKE INTO CONSIDERATION THE PERIOD FROM THE TIME THE STATUTE WAS ENACTED IN 1906 TO 1919, INCLUSIVE, FOR RESPONDENT ALLEGED IN ITS BILL OF COMPLAINT CONFISCATION DURING THIS PERIOD.

The Master and Court have given little attention to the period to be considered here. As a basis for his decision the Master has taken into consideration only the year 1919 and the first five months of 1920. His findings that the statute is confiscatory, however, seem to have been based upon the abnormal and unprecedented conditions of the year 1919, for he says in his findings No. 43:

> "During * * * the twelve months ended December 31, 1919, and during the portion of 1920, covered by the proofs before me, the said net operating revenue did not and does not as of the present time provide any return whatever upon the said fair present value of any of the property so owned and used by the complainant company as hereinbefore found" (p. 43).

In the opinion, he says (p. 48):

> "If, therefore, the actual results of operations for the year 1919 show the rate to be confiscatory, it follows that the net result of operations for the year 1920, which can only be determined in definite figures when the year has ended and the books for 1920 have

been closed, will show a larger deficiency than 61
appeared as the result of operations in the
year 1919. *I have therefore concluded to base my findings as to the cost of making and distributing gas especially upon the operations and costs established for the year* 1919, those figures being taken, of course, in the light of what I have just said, that the cost of making and distributing gas in the year 1920 62
will be in excess of the figures I reach for the year 1919."

In the bill of complaint, respondent company alleges:

"During *no year since its organization in* 1904 have the earnings of your orator 63
been sufficient to provide a return of as much as 6 per cent upon the reasonable value of its property devoted to the public use" (par. XIV, p. 6).

And again:

"The maximum price of one dollar per thousand cubic feet for gas, fixed by the said 64
act of 1906, *has been*, is and will continue to be wholly inadequate, in that it does not permit your orator to earn a reasonable return upon the fair value of its property devoted to the public use; (par. XVI, p. 7).

This was the period, 1904 to 1919 selected by respondent when it drew its bill of complaint. During the course of the trial the complaint was not modified or amended in this particular.

Appellants contend that the inquiry in this case should cover the time during which the

statutory rate complained of has been in force, viz.: 1906 to 1919, inclusive, and the statute should not be declared confiscatory merely by considering the cost of making and distributing gas during one or two abnormal years.

Respondent made no effort by suit or otherwise to have the statute declared confiscatory until the present abnormal conditions prevailed. It had twelve years available in which to bring the matter into court, for the results had been known for each year, and year by year, from 1906 to 1918. These years as to price of labor, materials and supplies and weather were normal and a fair test of the operation of the statute could have been obtained.

Beginning with about the year 1917, due to the World War, prices began to increase and conditions foretold that we were likely to enter into abnormal times. The years of 1918 and 1919 will go down in history as a time of great inflation of prices. They were abnormal years.

It was not until the beginning of the year 1919 that respondent filed its bill of complaint. The appellants contend that respondent deliberately selected this period of abnormal, unusual and unprecedented conditions to strike down the statute in question, and that it is taking advantage of a world-wide calamity to raise its rates.

Most of the witnesses admitted that the year 1919 was abnormal. Throughout the case the Master made frequent references to the fact that the year was abnormal.

In *Willcox* v. *Consolidated Gas Co.*, 212 U. S. 71
19, Mr. Justice Peckham writing for the Court (page 54), said:

> "It may possibly be, however, that a practical experience of the effect of the Acts by actual operation under them might prevent the claimant from obtaining a fair return, as already described, and in any event complain- 72
> ant ought to have the opportunity of again presenting its case to the court."

It is quite apparent that this Court did not have in mind that such a statute was to be put to a test on evidence for one or two abnormal years alone, *but during the whole period in which the statute was in force and until such time as respondent complained of it.* The inquiry should 73
have been directed to the whole time the statute has been in operation and a full and complete inquiry should have been made. The inquiry covering one or two years is not only unfair, unjust and inadequate, but manifestly will lead 74
to an attack of the statute for every temporary change in valuations, prices of labor, materials or supplies.

There is ample authority to sustain our contention that the statute should not be so considered.

Respondent's contention is virtually that this 75
Court should set aside an act of the Legislature which may have permitted the company an excessive rate of return for the many years in which this act has been operative, with the possible exception of 1919; the year being unprecedented and a year in which multitudes of individuals were making great sacrifices; a year in

76 which many companies as well as individuals were content with a greatly diminished return.

In the recent case of the *Municipal Gas Company v. Public Service Commission et al.*, the Court of Appeals said (225 N. Y. 89, p. 98):

> "There was no need to go back to 1917 and disclose the earnings of earlier years.
77 *The significance that they have is solely as evidence.* They have no place in the complaint."

The above case was before the Court of Appeals upon a demurrer and there was nothing before the Court to show that the year 1918 was abnormal.

78 The Court of Appeals distinctly said that the earnings of earlier years were relevant. The Trial Court should consider this evidence. It goes without saying that if the case were to be decided upon the results of one year or one or two abnormal years it would be wholly unnecessary and futile to receive evidence relating to
79 prior years. Consequently, the Court of Appeals must have expected that the evidence of the earnings of earlier years would receive some weight. Furthermore, the intention of the Legislature must be given some consideration. The Legislature has not attempted to fix the gas rate year by year. It did not reduce the rate for gas
80 years prior to the war when this company was making a large profit, or considerable more than a fair return.

We have shown in another place in this brief that this company enjoyed a return in excess of 6 per cent. on an average.

Is it reasonable that the large profit in all these 81
years should be absolutely disregarded and that the legality or illegality of the Act should hinge upon the return for 1919 alone, particularly so when it clearly appears that these were abnormal and unusual times?

If the Master's finding be correct that the stat- 82
ute should be destroyed upon the returns made in a year or a part of a year during an abnormal period, it would mean that the Legislature would be obliged to change the rate from year to year, in order to adjust that rate to the profits shown by the company. If the Legislature were to attempt to change the rate year by year, would it not be met with the assertion that in years to 83
come respondent might encounter conditions which would not give it a reasonable return? Would it not also be claimed that the Legislature should not be continually modifying rates? Further, the results for any year would not be known to the Legislature in time for action to be taken until another year had passed, and by 84
that time the conditions might have changed.

If it be contended that the entire function of rate making should be turned over to the Public Service Commission and the Commission should be required to fix a rate immediately without reference to the statute, we desire to point out that such a plan would impose upon the Commis- 85
sion such an enormous burden and such a host of rate cases every year that it would be entirely impracticable, and that many rates would go unregulated for lack of time to investigate the facts and render fitting decisions. It would become the duty of the Public Service Commission, at

86 the close of every fiscal year to review the financial condition of every utility to make or correct its findings as to the value of the property, and to decide whether to initiate a rate case, for no binding and legal decision could be rendered without giving each company an opportunity to be heard. This Court knows from experience the
87 large amount of time and expense involved in such a proceeding.

We call the Court's attention to the confusion which would result from a constant changing of rates and the difficulties which would arise in the adjustments of complaints. Every public utility would find its affairs in chaos and would
88 protest against constant revisions. Many have already insisted that when a rate is fixed it should be allowed to remain in effect for a period of years so that they may adjust themselves to the new conditions, and conduct their affairs without the turmoil of never ending rate cases.

In the *Lincoln Gas & Electric Co.* v. *The City*
89 *of Lincoln*, (250 U. S. 256), it appeared that the action was instituted in 1906, before the $1.00 rate, fixed by the city of Lincoln, had been tested. In the Trial Court the bill was dismissed without prejudice to the commencement of a new action. An appeal was taken to the United States Supreme Court where the decree was re-
90 versed and the cause remanded to the District Court with direction to refer it to a Master with leave to submit additional evidence (223 U. S. 349). Accordingly, a Master was appointed and he made a report in September, 1914, finding that the rate ordinance was not confiscatory. Upon the rehearing before the Master, he considered a

period from 1906 to substantially the time of his 91
report, which was in 1914, approximately *eight* years. Mr. Justice Pitney, in writing for this Court in that case said (p. 268):

> "Without going into details, we content ourselves with announcing our general conclusion, that, having regard to the entire period under investigation, we are unable to 92
> say that the Master erred in holding that the ordinance was not shown to have been confiscatory in its effect. It is probable that in the years 1907 and 1912, the net return was close to the line, if not below it; but that in other years examined it was at least 7 per cent.; and there are too many doubtful items for us to adjudge the ordinance void, in the absence of an actual and timely test." 93

The United States Supreme Court dismissed the bill, but without prejudice to the commencement of a new action to restrain the enforcement of the ordinance in question, if it should result after a practical test of $1.00 rate since May 1, 1915, that complainant did not obtain a return 94
which was compensatory.

The case of *Boyle* v. *St. Louis S. F. R. R. Co.*, 222 Fed. Rep. 539, p. 557, was a confiscatory case and the Court there investigated a rate for passenger fares of two cents a mile, fixed by the State Railroad Commission of the State of Arkansas. The opinion was written by District 95
Judge Trieber, and in the course of which he said:

> "By adopting the *four-year* period for averaging the earnings and expenses, we are able to get a fairer result than by merely selecting one year which may be affected by

96 peculiar conditions then prevailing. A four-year period when the years are fairly normal will reflect more accurately the traffic and cost" (p. 557).

In the case of *Darnell* v. *Edwards*, 244 U. S. 564, the Supreme Court had under consideration maximum rates on logs fixed by the Mississippi
97 Railroad Commission. The attack upon rates fixed by the Commission was that they were so low as to be confiscatory. In the course of the opinion of the Court, Mr. Justice Pitney said (p. 569):

"It is well established that in a question
98 of rate making there is a strong presumption in favor of the conclusions reached by an experienced administrative body after a full hearing. Besides this there was affirmative evidence before the district court to the effect that the rates were reasonable. The evidence for complainant tending to show that they were non-remunerative, while
99 based upon actual experience in the operation of the road, *not relates to only a brief period when conditions were abnormal* * * *."

And in concluding his opinion, he further said:

"But it is sufficient for the present to say that the experimental period was too brief
100 * * * and conditions during the entire period covered by the testimony have been too abnormal to enable us to say that the Commission's rates are confiscatory."

The period under consideration in the above case was from September 10, 1913, *to March* 31, 1914.

In the case of *Stevenson* v *Great Northern* 101
Railway Co., 72 N. W. Repr. 713, 721, the Court said:

> "If the Great Northern Company has made such large profits in the past that it was able to pay over large dividends and still accumulate such large amounts of surplus to invest in its properties or to carry 102
> along for several years, it should be content to go along with smaller profits in such times of financial stringency as existed in *1894*."

In the often quoted case of *Smyth* v. *Ames*, 169 U. S. 466, 546, this Court said:

> "As said in the case last cited, 'Each case must depend upon its special facts and when 103
> a court without assuming itself to prescribe rates, is required to determine whether the rates prescribed by the legislature for a corporation controlling a public highway are as an entirety so unjust as to destroy the value of its property for all the purposes for which it was required, its duty is to take into consideration the interest both of the public and 104
> of the owner of the property, together with all other circumstances that are fairly to be considered in determining whether the legislature has under the guise of regulating rates exceeded its constitutional authority and practically deprived the owner of property without due process of law. * * * The utmost that any corporation, operating a 105
> public highway, can rightfully demand at the hands of the legislature when exerting its general powers is that it receive *what, under all the circumstances*, is such compensation for the use of its property as will be just both to it and to the public."

106 The first case to arise in the State Courts of the State of New York, in which the abnormal years caused by the world war were considered was the case of *Kings County Lighting Company* v. *Lewis*, 110 Misc. Rep. 204.

As was said by Mr. Justice Greenbaum in that case (p. 242):

107 "It is clear that confiscation may not be predicated upon the operations of the plaintiff for 1916 and 1917. As to the years 1917 and 1918, it must at the outset be said that those years were abnormal owing to the war conditions then existing. Notwithstanding this abnormality the year 1917 showed a fair return at an eighty-cent rate. * * *

108 As to the year 1918, the question that confronts one is whether confiscation should be based upon such a year, even if it be established with reasonable certainty that the plaintiff's income was thereby reduced to a point which concededly would not be ordinarily deemed an adequate return upon the capital invested. * * *

109 The operations of a fiscal year which was as abnormal as was the year 1918, lack the value of a normal year in determining the future.

In this connection it will be instructive to study the opinions of the courts as to what is meant by a fair return and what period of time should be taken into account in determining the fair return and to what extent
110 abnormal conditions may affect the question of the adequacy of return."

A recent case to arise in the District Court Southern District of the State of New York was the case of the *Consolidated Gas Co.* v. *Newton*

et al., 267 Fed. Rep. 231. The opinion of Judge 111
Hand in that case was written in August, 1920. He states:

> "The master has taken complete evidence over a period of twenty months, from January first, nineteen hundred and eighteen, to August thirty-first, nineteen nineteen. Since that time eleven months have passed, during 112
> which there has been no fall in price levels. The record has some evidence of this down to a later day, but, of course, not down to the date of this opinion. But evidence is not necessary in the face of so patent and obtrusive a fact of daily life, and it is quite fair to say that the conditions which the master found as of August thirty-one, nine- 113
> teen hundred nineteen, has been aggravated during the succeeding year. The period despite its unusual character, I find to be a sufficient basis for the calculation of the cost of production, and the 'rate base' for a future time long enough to call for some judicial action" (p. 236).

The reason for adopting this period as a test 114
of the statute is clearly set forth by the learned Judge, for he states (p. 234):

> "either the evidence of the last 3 years is sufficient basis for a *forecast*, or it is not. If not, ante-bellum values should be used merely for the lack of any better; *if so, the average of the last 3 years is the proper* 115
> *basis.*"

Here we have an expression of opinion by the Court that the average over a period of three years is the proper test, where such a period indicates the future trend of prices.

Again he says:

> "It is quite true that if these prices could fairly be regarded as such temporary aberrations as the rate was meant to cover, this would not be so. Persons who embark their money in such enterprises must take the bitter with the sweet, and the lean years with the fat. Rates, when established, are not intended to make a nice adjustment to all ensuing conditions; they are too long and costly to fix, especially in court" (p. 234).

It is clear from a careful reading of the decision that the learned Judge had the impression, as had Special Master Gilbert, that we had entered into a period of permanent high prices, for he says:

> "Several reasons lead me to believe that present price levels are not merely transitory, though I recognize the danger of any prophecy" (p. 234).

He then proceeds to point out certain reasons which to his mind justifies his conclusions in this regard.

At the time of the decision of Judge Hand, there had been no marked fall in price levels apparent to him, while in the instant case, a precipitate decline in price levels has taken place of which this Court will undoubtedly take judicial notice.

The period of time proper for a test of the statute might be different in a case where price levels are not falling, but advancing, during a normal period, from a case where the price levels

were declining precipitately. In any case but in 121
this case in particular a much longer period
should be selected to make a proper test, and not
simply a short period during an unusual up-
heaval of prices.

There is an abundance of evidence in our every-
day life aside from the sworn testimony that com-
modity prices are on the downward trend and 122
have been so since the fall of 1920, and as Judge
Hand remarked:

> "Evidence is not necessary in the face of so patent and obtrusive a fact of daily life" (p. 236).

The price trend of the two well-known mercan- 123
tile houses of world-wide reputation, Dun's and
Bradstreet's, show in graphic form what every
man learns when purchasing commodities for his
home. A recent report shows that the price levels
of general commodities have declined about 48 per
cent from the high mark of February 1, 1920.
The descent in prices, like their rise, has been the 124
greatest, in the given time, that the world has
ever known.

The next case to arise in this same Federal
Judicial District was the case of *Kings County
Lighting Co.* v. *Nixon et al.*, 268 Fed. Rep. 143,
decided by Judge Hough on October 13, 1920.

The learned Judge did not follow the rule laid 125
down by Judge Hand in the Consolidated Gas
case that "the average of the last three years is
the proper basis" where "the evidence of the last
three years is a sufficient basis for a forecast,"

126 but disregarding the question of an average over a period of years, remarks:

> "The point is that the 80-cent rate is confiscatory not because it does not yield a sufficient percentage on capital, but because to produce it at that price, consumes capital. Neither the Willcox case nor any other decision can be cited to show that any definite or
127 fixed period of experimentation is a necessary prerequisite to a suit of that kind. If plaintiff were getting any return at all another question might be presented, but it is to me a matter of no doubt whatever that a year and a half is a long enough time to experiment with proved capital losses before applying for relief."

128 Thus, the rule stated by Judge Hand that an average of three years is the proper test, was held not to apply in a case where capital is actually consumed during a year and a half, and no return at all enjoyed.

It should be noted in this connection that the
129 Kings County Lighting Company, never having operated under the rate, never experienced proved capital losses thereunder and that is here on appeal.

When the Master's report in the instant case came before Judge Mayer for review on this important point (p. 110), the learned Judge said:

130 "The year, 1919, is, in this case, 'a sufficient basis for the calculation of the cost of production and the "rate base" for a future long enough to call for some judicial action.' "*Municipal Gas Co.* v. *Public Service Com.*, 225 N. Y. 89; *Consolidated Gas Co.* v. *Newton et al.*, 267 Fed. Rep. 231; *Kings County Lighting Co.* v. *Nixon et al.*, 268 Fed. Rep. 143.

"The opinions of Judge Cardoza, Judge Learned Hand and Judge Hough, in the cases just cited, fully set forth the reason for this conclusion and with those reasons on this point I am in full accord." 131

In this case, Judge Mayer found that in 1919 the net cost of gas delivered was 1.29 cents per M. in excess of the statutory rate. 132

This decision, likewise, does not follow the rule laid down by Judge Hand that an average of three years is the proper test, but holds that the rate is confiscatory where a slight loss occurs during one year.

The application of the rule of Judge Hand in the Consolidated Gas Co. case — an average of three years — if applied in the instant case would have shown a fair return on the Court's own figures, but the decision was based on one year alone. 133

The prediction that the trend of prices of all commodities was sharply upward, contrary to the actual fact of a precipitate decline, which has actually happened, probably influenced the court in all the cases just cited. 134

In the case of the *Municipal Gas Co.* v. *Public Service Commission*, 225 N. Y. 89, which case arose on demurrer and consequently the only question before the court was the adequacy of a pleading, Judge Cardoza remarked: 135

> "That dearth does not signify confiscation unless unreasonably prolonged, may be assumed to be true (citing *Darnell* v. *Edwards*, 244 U. S. 564). The difficult thing is to determine where the line is to be drawn" (p. 98).

136 In the *Kings County Lighting Company* case (supra) and in the instant case, the Court seems to adopt the rule that where a deficit resulted under the statutory rate, for a year and a half or even a year, such a period was sufficient and the statute confiscatory.

This rule does not seem to us to be sound. The
137 statute might be declared confiscatory where an inadequate return is had, as well as where no return or a deficit results. The period of experimentation is not affected by this fact and the proper period is alike in both instances.

Imagine a test for a five-year period with an inadequate return on capital each year, and an-
138 other five-year period with a deficit for two years, but an average of 8 per cent return for the full five-year period. The Court would surely be more inclined to hold the rate confiscatory during the first case, than during the latter.

As Judge Cardozo remarks in the case of *Municipal Gas Co.* v. *Public Service Commission*,
139 225 N. Y. 89:

> "Fleeting losses may be suffered, and yet the balance sheet may show a profit."

On the other hand, substantial profits may be made for a large part of any period and the bal-
ance sheet may show a slight deficit. Is it sound
140 to hold that a dearth shown by a balance sheet at the end of one year but not unreasonably prolonged, is confiscation?

The question of a proper period for a test has not been presented to the Court of Appeals, but the decision in the Municipal Gas Company and

other cases would indicate that when the question 141
is presented for decision the rule will be adopted
that an average over a period of years is the
proper test. Many decisions indicate that this
will be the rule.

In the case of *People* ex rel. *Kings County Lighting Co.* v. *Willcox*, 210 N. Y. 479, Judge Miller says (page 487): 142

> "The investors in a new enterprise have to be satisfied as a rule with meagre or no returns, while the business is being built up. In a business subject only to the natural laws of trade, they expect to make up for the early lean years, by large profits later. *In a business, classified among public callings, the rate making power must allow for the losses during the lean years, or their rate will be confiscatory*, and of course will drive investors from the field. In the former class the value of the established business is a part of the 'good will' and may be determined by taking a given number of years purchase of the profits, or exchange value may be considered. In the latter case a different rule must be adopted." 143 144

Judge Miller, by the above language, could have meant but one thing; that is, that the rate should be so fixed that the returns in fat years would care for the losses during the lean years. There is no way to accomplish this, but by averaging the returns over a period of years or by taking into consideration the reserves or accumulations of the company. 145

While this Court has not decided this issue squarely in a confiscatory case, the trend of the

146 decisions in kindred cases, leads to our view upon this important point.

Boyle v. *St. Louis R. R. Co.*, 222 Fed. Rep. 539.

Darnell v. *Edwards*, 244 U. S. 564.

Stevenson v. *Great Northern Ry. Co.*, 72 N. W. Rep. 745.

147 *Lincoln Gas & Electric Co.* v. *City of Lincoln*, 250 U. S. 256.

Columbus Railway Power & L. Co. v. *City of Columbus*, 249 U. S. 399.

It is well settled that had the respondent entered into a contract in the year 1906 with the 148 City of Flushing to deliver gas for $1.00 per thousand cubic feet, the proper period to test the constitutionality of such a contract would be the whole term of the contract.

Columbus Railway Power & L. Co. v. *City of Columbus* (supra).

City of Knoxville Gas Co. v. *Knox-* 149 *ville Water Co.*, 261 Fed. Rep. 283.

Is there such a marked distinction between a contract fixing rates and a statute fixing rates, that in the one case the whole term of the contract is the proper period for a test, while in the other, a test taken during one or two abnormal 150 years suffices? We believe the period of experimentation is alike in both cases and that this Court will adopt such a rule.

In the case of *Bronx Gas and Electric Co.* v. *City of New York*, 195 App. Div. 554, where the Appellate Division, First Department, had before

it the question as to whether it was proper to 151
order a reference in a gas confiscatory case, Mr. Justice Page said (p. 3):

> "The acts which it is sought to have declared unconstitutional were passed 15 and 16 years ago. *The practical experience of the company under these acts up to January 1st, 1917, taking into consideration the* 152
> *changes that would be occasioned by the increase in the cost of materials and labor will be the determining factors in the case.*"

In the light of these authorities we submit that under the circumstances of this case, the shortest period which will reflect with any reasonable accuracy the return respondent has enjoyed under 153
the statutory rate is not less than the period during which the statute was in operation, viz: 1906 to 1919, inclusive.

POINT III

RESPONDENT HAS ACCUMULATED A FUND AMOUNTING TO $101,149.66 AS A CONTINGENCY 154
RESERVE. THE STATUTE SHOULD NOT BE DECLARED CONFISCATORY UNTIL THIS FUND IS EXHAUSTED. TEMPORARY LOSSES DUE TO ABNORMAL CONDITIONS, LIKE ANY OTHER HAZARDS OF BUSINESS, SHOULD BE DEBITED AGAINST IT.

The respondent prior to November 16, 1915, 155
carried a reserve account designated as "Accrued Amortization." The balance in the last named account amounting to $62,254.82 was then transferred to a new account called "Contingency." (Ex. A9, p. 2808.)

156 This transfer was done in pursuance to a resolution passed by the board of directors of respondent at their meeting on Tuesday, November 16, 1915.

It reads:

"On motion, duly seconded, it was

Resolved: That the title of the account
157 heretofore designated as Accrued Amortization, be from and after December 13, 1914, designated as Contingency, and that, for each month thereafter, there shall be credited thereto and charged to operating expenses an amount equal to five (5c) cents per thousand cubic feet of gas sold during said month, for the purpose of providing for con-
158 tingencies or casualties, such as those caused by fire, flood, earthquake, insurrection or riot, or *any other hazards;* no charge against said Contingency Account nor any appropriations therefrom to be made, except by authority of the board of directors. . . ."
(p. 719.)

159 During the years 1915, 1916 and 1917 when the account was active, respondent charged its consumers 5 cents per thousand cubic feet of gas sold to produce this contingency reserve. (p. 777.)

On December 31, 1919, the balance sheet of the respondent shows that the amount in the so-called "contingency" account was $101,149.66. (Ex.
160 A9, p. 2808.)

Mr. Raynor, the secretary of respondent, testified as follows, regarding this fund:

"Q. Is it fair to say of your testimony, Mr. Raynor, that the company now has on hand to the credit of Reserve Contingency the sum of $101,000 odd? A. It is.

"Q. And that is on hand? A. Yes. 161
"Q. And to be accounted for by the company? A. Yes" (p. 778).

"Contingency" is defined in Bouvier's Law Dictionary, Rawles Edition (p. 421) as

> "The quality of being contingent or casual; the possibility of coming to pass: an 162
> event which may occur (Webster). It is a fortuitous event which comes without design, foresight or expectation (39 Barb. 272)."

A contingent fund is an amount reserved or set aside with which to meet specific exigencies and unforeseen events which may or may not happen. 163
The purpose as disclosed by the company of the fund was to provide "for contingencies or casualties such as those caused by fire, flood and earthquake, insurrections or riot, or *any other hazard.*" Whether the account is now in cash or whatever form, it does not appear, nor does it matter. If it is to be used for the purposes 164
set forth in the resolution it must be in some available form. Such a large fund should be kept invested and not be allowed to remain idle. If invested in the plant, such betterments could be capitalized when necessary.

The sole question to determine is whether the temporary losses due to abnormal conditions is properly chargeable against this contingent fund 165
the same as any other hazard of respondent's business.

The appellants contend that this is one of the objects of this reserve. The resolution of the board of trustees is broad and sweeping and covers unusual happenings, some extremely

improbable, such as flood, fire, earthquake, insurrections and riots and any other hazard, other than those defined, are intended to be covered and to be taken care of by this reserve. Surely the consequences resulting from the Great War followed by the enormous inflation, labor disorders, and unsettled conditions are hazards encountered by every business and are provided for, as every unforeseen event by suitable reserve or by contingent reserve funds.

When the fund was being accumulated, of course, the respondent did not know that the World War would take place, but, as we have stated, it is obvious that the fund was amassed for the purpose of taking care of unforeseen events and exigencies not then fairly contemplated. There is no evidence that the fund has ever been drawn upon by the company to take care of any of the contingencies specifically mentioned in the resolution. A similar contingent fund was considered by Special Master Graham in the case of the *Brooklyn Union Gas Company* v. *Nixon, et al.*, and the contention here made by the appellants was advanced in that case. The Special Master did not express an opinion on this question, but charged the contingent fund with the sum of $150,000, being a portion of an extraordinary expense due to a strike at the plant of the Brooklyn Union Gas Company.

When the report of Special Master Graham came before Judge Mayer for review the point was again urged upon the court. The court said

> "3. Contingent Fund. There is much argument upon this point. If there were an actual cash contingent fund on hand, it migh

be well contended that it should now be utilized to carry complainant over a confiscatory period. This so-called fund, however, does not exist as cash. It has gone into the property in one form or another. That dividends have been paid in the past does not produce a cash fund in the present." 171

Brooklyn Union Gas Co. v. *Nixon et al.*, (not reported). 172

It would seem, therefore, that the learned Judge adopted the contention made by the appellants that it was proper that this fund be now utilized to carry respondent over a confiscatory period but failed to apply the rule because it was not shown that the fund existed in actual cash. We 173 submit that this was immaterial and was not a reason for the nonapplication of the rule for the fund must be in some available form to carry out the intended purposes, as shown by the resolution of the board of trustees.

It is not clear why the learned Judge should approve the action of the Special Master in drawing upon this fund for the expense occasioned by the strike and still refuse to charge against this fund the temporary losses due to the abnormal conditions. He said it could not be used to take care of abnormal conditions, because not in cash — yet he draws upon it for a strike — the inconsistency of his position is apparent. 175

As we have already stated, there is no evidence whatever that this sum has been spent for capital purposes, extensions, betterments or anything else; but for the purpose of argument assume that it has been so spent for one of the above purposes mentioned.

176 One of two things must be true — either:

(a) The property in existence before the accumulation of this fund was actually worth the value of the capital issued against it and was kept up out of the earnings in accordance with law, in which case the betterments now representing the contingent fund would have no capital issued
177 against them but the same should now be capitalized and the moneys used for contingencies; or

(b) The property in existence before the accumulation of this fund was not worth the capital issued against it, in which case $101,149.66 of betterments representing this fund would readily go to drive out watered capital, and there would be nothing to capitalize.

178 In either case the consumers should not be made to suffer for the over-capitalization of respondent prior to the accumulation of the fund.

The claim is made that the statutory rate fell short during the year 1919 of affording respondent a fair return on the fair value of its property
179 used in the gas business. Our contention is that the stockholders have, through their constituted officers, accumulated this fund for the purpose of taking care of exigencies and abnormal situations such as this. Consequently, as soon as it appeared that the return fell short of what the company considered a fair return, then the company should have treated this fund as a means of
180 making up the loss, and in no event could the statute be declared confiscatory until it was shown that the fund was exhausted in making up such losses.

The fund was in the nature of insurance, created out of the rate charged the consumer,

to be used in any emergency, and so long as the 181
consumers provided the company with this insurance, it is improper to make them pay again for the losses. In other words, if the rule for which we are contending is not adopted then the consumers would be made to pay twice for the failure of a declared return during the abnormal periods prevailing in 1919. 182

Such a condition condemns itself and is contrary to fair dealing. The company may not thus enrich itself at the expense of the consumers. The only burden which the consumers must bear is to see to it that they pay a rate which will give the company a fair return; and if they pay more than is necessary in fat years, and the difference 183
is accumulated in an insurance fund, such as here, then they have discharged their full duty to the company and the fund must respond to make up any inadequacy of return. Otherwise, the amount paid by the company to consumers in prior years when the fund was accumulating, was too large to the extent of the amount taken out to create 184
this fund. What we mean to say is that the rate at that time was grossly exorbitant unless the consumers were engaged in setting aside a reserve or insurance fund to take care of the day when the company might meet a condition such as confronted it in 1919.

Assuming for the purpose of argument only 185
that the fair value of the company's property and the rate of return it was entitled to enjoy was correctly set forth by the learned Judge below, it will be readily seen that this fund was large enough to carry the company over a period

186 of several years without changing the statutory rate and without any income for making and selling gas for such period.

But aside and apart from this we have shown that respondent enjoyed a fair return throughout.

187

POINT IV

RESPONDENT EARNED A FAIR RETURN IN THE YEAR 1919.

The Court below found the cost of production and distribution of gas in this year to be $1.0129 or 1.29 cents in excess of the statutory rate (p. 112).

188

The items making up this cost found by the Court are as follows:

Cost of production per M	63.45 cents (p. 111)	
Unaccounted for gas per M	7.45 cents (p. 111)	
Total per M		70.90 cents
Cost of distribution per M	27.07 cents (p. 112)	
189 Replacements per M	3.00 cents (p. 112)	
Taxes per M	7.07 cents (p. 112)	
Total per M		37.14 cents
		108.04 cents
Misc. revenue per M (p. 112)		6.75 cents
Net cost per M found by Court (p. 112)		101.29 cents

190

It will be seen that the Court below, accepted the figures given for the cost of production in Complainant's Exhibit No. 64 (pp. 1569, 1570). This exhibit shows the cost of production as 63.45 cents per thousand cubic feet.

(A.) *The Court and the Master erred in not crediting to cost of operation at least 5.88 cents per thousand cubic feet or $19,770.01 because of excessive "repairs at works."* 191

The Court below, as we have stated, accepted the figures given by respondent for the year 1919 alone for cost of production (Ex. 64, pp. 1569-1570). 192

Both the Court and the Master overlooked the fact that repairs at the works was abnormal and unusual as compared with other years.

On this Exhibit there appears two items:

	Amount	Cost per M cubic feet
Repair labor	$10,101 99	.0266 cents
Repair material ...	17,843 55	.0469 cents
		.0735 cents

193

These amounts expended are unusually large for the year 1919 as compared with earlier years and far more than a normal cost for such items. This is conclusively shown by Complainant's Exhibit 77 (p. 1596) and testimony relating to it given by respondent's Engineer Mr. Woods. 194

This Exhibit, introduced by Respondent, shows the following:

	Total cost per million	Cost in cents per M cubic feet
Repair labor	$23 00	2.30
Repair material ...	30 00	3.00
Total	$63 00	5.30 (p. 1596)

195

196 In other words, Mr. Woods expressed the opinion, that for a fair operating condition, .0530 cents ought to be sufficient, instead of .0735 cents, as shown by said Exhibit 64.

Mr. Woods' testimony condemns such a large amount for repairs as excessive.

He stated:

197

> "The Master: Or, putting it another way, you believe the cost of repair labor should show as a matter of actual operation about $23 a thousand?
>
> The Witness: $23 a day, or 2.3 cents a thousand" (p. 420).

198 And again:

> "Q. First as to repair materials, have you figured what in your judgment the repair material required for such a plant would cost per thousand? A. Yes, 3 cents per thousand" (p. 421).

199 The Court below, though he concluded that "the estimate of an expert like Mr. Woods is valuable" (p. 111) and accepted his judgment as to unaccounted for gas, failed to accept his estimate on the above items. Had the Court done so, he would have found, that the cost of production should have been reduced by .0205 cents (.0735 — .0530) or that the cost of production in-
200 stead of being 63.45 cents should be according to respondent's engineer 61.40 cents.

The Master, upon the trial however, thought that 3 cents for the repair material item was too liberal as will be seen (pp. 450, 451) for upon cross-examination Mr. Woods was confronted with

his testimony in the Consolidated case wherein he 201
allowed for this item 1½ cents per thousand cubic feet (p. 449). In fact, the Master stated that he thought that figure of 3 cents should be cut down (pp. 450-451). The difference there was accounted for by the witness Wood by stating that it was due to capacity. Here again the court's attention should be called to the fact that Ex- 202
hibit 11-z (p. 1727) produced by the respondent of its gas manufactured and sold in the year 1920 shows an actual increase for the same period in 1919 about 28%.

The Master evidently was impressed that the figure of 3 cents was too high and he took the witness Wood in hand and the following examina- 203
tion by the Master appears (pp. 450-451).

"By the Master:

"Q. Is it possible, Mr. Woods, that this repair material for 1919 included material put in stock, that would make that difference in your estimate of 3 cents in the actual cost of 4.69, according to the record? A. Well, I 204
would not say. They may have bought material charged to repair account, and it may be in stock pending the use of it.

"Q. Yes? A. I would not say, that might be so.

"Q. In arriving at what the fair cost of production would be for one year I ought to have that in mind. A. I do not know that 205
that is the case.

"Q. That is, taking into consideration your statement that you think 3 cents is right, and your testimony in the other case or your statement today that 1¾ would be right for the Consolidated, for a larger plant, as compared with 4.69, it would indicate put-

206 ting in an additional supply, would it not, or a reckless expenditure of money, either one? A. Their cost may have been somewhat lower the year before, or there may have been more extensive repairs in 1918 than in 1919."

" * * * The Master * * * I think I have got to shave this. You have iron mass, and repair material that seemed to be higher
207 and would indicate putting in of stock."

The master as usual failed to adjust this item as he indicated he would do on the trial.

The books of the company indicate that in the year 1919 the increase of repairs over the year 1918 is about 300%. This shows either one of two things: that the repairs were unusual or ab-
208 normal by reason of the fact that they had allowed repairs of previous years to accumulate and had made them all in the year 1919, or that they had deliberately padded this item. The testimony of Mr. Spear on that point is quite interesting and he in part concedes that the repairs for the year 1919 were unusual (pp. 694-695).

209 "Q. Mr. Spear, was the year 1919 one unusual with reference to repairs, so far as your company is concerned? In other words, did you do a lot of repairing in the year 1919? A. We did considerable repairing in 1919.

"Q. More so than in any previous year? A. I wouldn't say that.

"Q. Well, comparing it with 1918? A. We
210 may not have done so much in 1918 on account of war conditions, not being able to get materials, and had to make up for it in 1919.

"Q. How about 1917? A. That same condition existed.

"Q. How about 1916? A. Well, I can't recall what work we did as far back as that.

"Q. It is fair to say, is it not, that you left a number of repairs to accumulate and that you made them in 1919, which you contend is the first year you were able to make them in? A. No; I say it might have been that way. 211

"Q. Let me call your attention to some of the items here, perhaps this may refresh your recollection: In the year 1918, repairs of works and station structures, labor $200.56; 1919, $656.52. Do you recall any of those figures? A. I don't recall the exact figures; no. You want to realize this condition, too, Mr. Neumann, that we paint our holders about every three years. In the meantime it might be necessary to paint part of it so that it might come heavier in one year than in another. You can't take repairs—*you can't take an average in any one year.* 212 213

"Q. That is, repairs taken for one year would not be a criterion of the general average of repairs over a period of years? A. Not necessarily.

"Q. That is what I am trying to get at. Take, for instance, the item of repairs to gas apparatus, under materials, in the year 1918, there was $4,020.81 spent; and in the year 1919 $12,891.89. How do you account for that? A. Well, I can't recall the details because I haven't gone into it; some of that might be due to increase in cost of materials. 214

"Q. But the increase in cost wouldn't be 300 per cent? A. Oh, no.

"Q. So that it can only be explained upon the ground that there were more repairs to gas apparatus in the year 1919 than in the previous years by about 300 per cent? A. I would say that is part of the explanation; 215

216 part of it is more repairs, and the other part would be increase in cost.

"Q. Take repairs to gas apparatus and labor, the amount in 1918 is $3,528.06; and in 1919, $6,527.79. A. That same condition would apply there, due to increase in labor as well as materials.

"Q. And finally going to the totals of re-
217 pairs of all kinds, in the year 1918 it was $14,326.84; and in the year 1919, $33,642.56; how do you account for that? A. Only in two ways, that the work done in 1919 was more than in 1918, and also in the increase in cost of labor and materials.

"Q. By reason of the fact that repairs were allowed to accumulate? A. Well, I wouldn't say that.

218 "The Master: Well, do you mean the repairs were allowed to accumulate or that they might not have been necessary?

"Mr. Newmann: Either one.

"The Witness: Yes, or it might not have been necessary to make repairs in 1918, but I would say that there was some accumulation there, in my recollection of it."

219

The following table will show at a glance the amount expended according to the books by resondent for various items comprising repairs at works, 1914, to 1919, inclusive.

Appellants contend that because of the abnormality of 1919 and the apparent excessive
220 repairs for that year the expenditures for this work, should be averaged over a period of years, and in this case such period should be at least five years. Accordingly, in the second half of the table which follows we have averaged such repairs for the years of 1914 to 1918, inclusive.

and also for the purpose of comparison averaged 221
same for the period 1914 to 1919, inclusive. We
have then showed by figures the saving in dollars
to respondent in 1919 had the court adopted an
average for these repairs over the five year
period. There would therefore have been a sav-
ing, as shown by the table, of 5.88 cents per
thousand for gas sold had the court adopted the 222
average five year of 1914 to 1918, inclusive, or
4.90 cents per thousand cubic feet had the court
adopted the six year period which included the
unusual year of 1919.

223

224

225

Table Showing Repairs at Works

	1914	*1915*	*1916*	*1917*	*1918*	*1919*
Repairs of works and station structures	$2,538 82	$2,477 57	$981 19	$1,208 15	$1,254 69	$2,671 18

Cents per thousand cubic feet of gas sold			5 88	4 90

(Def. Ex. A 15, p. 1760.)

There was no explanation offered by the 231
respondent of this unusual increase in the year 1919 over other years, and here again we say that in that respect, at least, the year for this company was abnormal. It must have either made repairs neglected in previous years or it must have inflated its works repair account for that year, because the increase is over 100 per 232
cent and the record is quite replete with statements that the increase in price was nowhere near that amount over the previous year.

There should be deducted for this item 5.88 cents per M, or $19,770.01.

(*B.*) *The court and the master erred in not crediting the cost of distribution at least 1.47* 233
cents per M cubic feet, or $4,962.54, because of excessive repairs in the transmission and distribution system.

The appellants contend that cost of repairs of all kinds should be averaged over a period of years.

The reasoning of District Judge Tavier in the 234
case of *Boyle* v. *St. Louis S. F. R. R. Co., supra,* that

> "By adopting the *four-year* period for averaging the earnings and expenses, we are able to get a fairer result than by merely selecting one year which may be affected by peculiar conditions then prevailing"

applies with special force to the expenditures for 235
all repair items, for these items are variable depending upon many conditions, such as weather, care, extent of use and others.

During a severe winter such as the winter of 1919–1920, the operating expenses are largely

increased because of the excessive amounts of coal used, the additional expense attending the many calls from consumers having trouble with their appliances and an increased unaccounted for gas due to the greater condensation.

Repairs to mains, services and meters vary considerably from year to year; one year due to some unusual and abnormal condition, the item will be unduly large and the following year, the same item will be comparatively smaller. The repairs are expensive and when once made do not recur for a period of years.

The following table gives the amount expended, according to the books, by respondent for repairs in the transmission and distribution system. What we have said in regard to the averaging of repair at the works applies to those repairs, and same should be averaged over a period of at least five years. The table below shows the average of such repairs for the years of 1914 to 1918, inclusive, and the same for the period of 1914 to 1919, inclusive. The table further shows a saving in dollars to respondent in 1919, had the court adopted for this item, an average period of five years. Thus there is a saving, as shown by the table, of 1.47 cents per M for gas sold for the five year period of 1914 to 1918, and a saving of 1.23 cents per thousand had the court adopted the six year period, from 1914 to 1919, inclusive.

Repairs of Transmission and Distribution System

	1914	*1915*	*1916*	*1917*	*1918*	*1919*
Repairs of gas mains	$3,744 97	$1,548 42	$1,053 28	$1,800 49	$1,539 65	$5,697 02
Repairs services	340 71	167 89	175 95	180 54	952 88	809 35
Repairs meters	2,862 46	3,536 82	1,435 32	5,763 91	3,952 42	4,571 28
Total	$6,948 14	$5,253 13	$3,064 55	$6,104 84	$6,604 95	$11,077 65

	Average 1914-1918	Average 1914-1919	Saving in 1919 by using the average for 1914-1918	Saving in 1919 by using the average for 1914-1919
Repairs of gas mains	$1,981 36	$2,639 63	$3,715 66	$3,096 39
Repairs services	423 57	486 87	385 78	322 48

Total	$6,115 11	$6,911 37	$4,962 54	$4,136 28
Cents per thousand cubic feet of gas sold			1 47	1 23

(Def. Ex. A 15, p. 1769.)

245 244 243 242 241

There should be deducted for this item 1.47 cents per M, or $4,962.54, or a like credit to the cost of distribution.

(C) *The Court should have found that 7% or 5.71 cents per thousand cubic feet was a reasonable allowance for unaccounted for gas. This would be a credit to cost of operation of $5,749.53.*

The Special Master allowed 11.03% for the year 1919 or 8.28 cents per thousand cubic feet (p. 51) while the court reduced it to 10%, or 7.45 cents per thousand cubic feet (p. 111).

The loss of gas, called unaccounted for gas, is a variable quantity depending to a great extent upon the weather conditions, care and attention of the management. It is impossible to determine what the loss will be in advance of its disappearance. One year it may be surprisingly large, and the next comparatively small. There is no question however, but what long cold and severe winters such as the winters of 1917–1918 and 1919–1920, affects the condensation of the gas and causes a greater loss than usual; and on the other hand, the mild winter of 1920–1921, which we have just experienced, will undoubtedly result in a much smaller loss.

The Master states

> "there is ample evidence in the case indicating that it is practically impossible to regulate the amount of 'unaccounted-for' gas and that factors were operative in 1919 which tended to increase the percentage. Weather and other conditions affect the gas in such manner and form that it is impossible to say that 'unaccounted-for' gas should be kept below a certain percentage.

Some years it seems to run very high, and in other years it seems to run quite low. This variance is caused by a number of changing conditions" (p. 51).

The Master accepted the actual loss as shown on the books of respondent for that one unusual and abnormal year, viz., 11.03% (p. 51).

Appellants contended on the trial and we make the contention now, that a fairer and more just method of determining the amount of this loss is by taking the average loss over a period of years, for surely what the loss will be is best determined by what it has been in the past.

The unaccounted for gas, of respondent expressed in cents per thousand feet, according to its books, is as follows:

Year.	
1909	5.67
1910	6.62
1911	6.03
1912	6.25
1913	6.79
1914	5.97
1915	6.32
1916	4.40
1917	4.11
1918	5.27
1919	8.27

(Defts. Ex. A 13, p. 2812.)

The increase in 1919 over the year 1918 will be seen to be 3 cents per thousand, and in the record there is no satisfactory explanation of this large increase.

256 The average for a ten year period, 1909 to 1918, inclusive, is 5.74 cents, and this appellants contend, should be the amount allowed, instead of 7.45 cents allowed by the Court below.

When the report of the Master came before Judge Mayer in the Court below for review, he stated

257 "The 'unaccounted for' gas, so called, for 1919, was 11.03 per cent. This percentage varies. Some years it may be more, others less. Therefore, the estimate of an expert like Mr. Woods is valuable. This plant in his opinion should show a loss of about 10 per cent and I accept that figure, for the purposes of this case, instead of 11.03 per cent"

258 (p. 111).

* * * * * * *

"My figure of 10% instead of the Master's 11.03% changes the 8.28 cents to 7.45 cents" (p. 111).

Mr. Woods is the Assistant Engineer of manufacture of the Consolidated Gas Company, and

259 Consulting Engineer of the respondent and was a witness much interested in the success of this litigation.

The Court below should, in all fairness have adopted the figure showing the average loss of gas as experienced by the Company in its operations, rather than the opinion of respondent's

260 engineer. It is far more reliable for surely the past experience of respondent is a much better guide than the opinion of an expert.

Judge Hand in the case of the *Consolidated Gas Co.* v. *Newton* took an average over a period of 13 years.

here should therefore be a credit to cost of 261
ration for this item of $5,749.73.

(b) The item of uncollectible bills should be included as an operating expense of respondent.

The amount of uncollectible bills allowed be- amounts to $1,249.02 or .0040 cents per M ic feet sold (Ex. 64, p. 1572). This is the hibit used by the Master and Court. 262
The appellants contend that this item should excluded in a confiscatory case of this kind.
The Transportation Corporations Law of New ork (section 65) authorizes respondent to equire:

"* * * every person to whom such cor- 263
poration shall supply gas * * * for lighting any building, room or premises, to deposit with such corporation a reasonable sum of money according to the number and size of lights used or required or proposed to be used, for two calendar months by such person and the quantity of gas * * * necessary to supply the same as security for 264
the payment of the gas * * * or compensation for gas consumed * * * to become due to the corporation, * * *"

The respondent, unless the deposit is made as required by the above section, might cut off the supply of gas to the consumer, or refuse to serve him. 265

Section 65 of the Transportation Corporations Law.

The courts have even gone so far as to hold that a gas company may cut off the supply of gas to

a consumer who neglects to pay, although he may have made a deposit as security.

Hearsey v. *Queens Borough Gas Co. & Elec. Co.*, 47 Misc. (N. Y.) 375.

Here the company is authorized by statute to obtain in advance a deposit to cover gas to be thereafter sold to the consumer. In other words, it may have its money in advance. It is a protection not ordinarily afforded other business. At least with this safeguard the burden was upon respondent on showing that it used more than ordinary diligence in its effort to collect its gas bills, and this ought to appear before any allowance is made for such item.

All that we have here is the inclusion of a sum for uncollectible bills without any competent proof showing diligence on the part of the respondent to collect the amount from its consumers. There is a lack of proof sufficient to warrant the court in allowing any sum for this item. While, on the contrary, we think, in view of the statute quoted, and the safeguards surrounding respondent in the sale of its gas, there ought not to be any allowance in any case for uncollectible gas bills.

Respondent has something better than a cash business. It may obtain its cash in advance and place it on deposit to await the day when it furnishes gas. It may then reimburse itself out of the consumers' money. There ought not to be any loss to the company by failure of a consumer to pay.

We submit that this item should be disallowed entirely and the exception sustained.

271

terest on consumers' deposits should be as an operating expense of respondent. mounts to $1,521.10 or .004 cents per M

nsportation Corporations Law of New ection 63) provides that gas companies 272
ect from the consumers prior to use of a sum equal to two months' consumption

law, undoubtedly enacted at the request as companies, including respondent, is a right bestowed upon the company. This obtained in advance from the consumers 273
ited in the general funds of the company sed for all its corporate purposes.
aw above referred to, also provides that on this money belonging to the consumers paid by the company. And so we find l in the operating expenses, the sum of 0 (Compts. Ex. 64, p. 1572).
we find that the company has charged 274
ith these amounts, as interest to be paid consumers on this fund, still nowhere do that the company has given the consumer n any manner for the use of these monies d with it pursuant to law. The company ne bank at least 6% for the use of other 's money, and surely it ought to be as lib- 275
ien using the money of its consumers de- with it. We submit that this item is not er operating expense and should be elim-

question of the propriety of including this a rate litigation was before Judge Hand

276 in the case of the *Consolidated Gas Company of New York* v. *Newton, et al., supra*, and he said as follows:

> "*Interest on Consumers' Deposits.* In whatever way figured, it seems clear that this is in no sense a proper item in the cost of distributing gas to the consumer. I am
277 not trying to learn what were the revenues of the company in the past, but to establish a basis for the cost of distribution in the period to be covered by a decree. I disallow this item, forty thousand nine hundred and five dollars for 1918, and thirty three thousand and six hundred and one dollars for 1919."

278

We do not find this question was passed on by the Special Master, A. S. Gilbert, nor by Judge Mayer in his review of the Master's report.

The learned Judge however, has excluded this item in the cases of *Central Union Gas Company* v. *Newton* and *Northern Union Gas Company*,
279 which subsequently came before him for review. It should be excluded here.

(F) The respondent used an excessive amount of boiler fuel in 1919 which should be deducted from operating expenses. The value at the excess is $5,307.21, or 1.1 cents per M made.

Appellants make the same contention in regard
280 to boiler fuel as is made in regard to repairs, that is to say: The quantity used should not be based upon the abnormal amount claimed to be consumed in this year, but should be the amount shown to have been used by the company by taking an average for a period of years. We have averaged it over the years 1913 to 1918, inclusive

The Master took as the basis for his figures 22 pounds of boiler fuel per M cubic feet of gas made (see p. 38, wherein he sets forth cost of production 63.45 per M); this checks with complainant's Exhibit 64 where the cost is the same amount. He said in his report (p. 37), that approximately 19 lbs. of boiler fuel is necessary. He apparently failed to adopt this figure in his cost of production because he accepted the figures in complainant's Ex. 64, p. 2496, and this exhibit is based on the amount of boiler fuel shown by complainant's books for year 1919. The testimony is illuminating. 281 282

> "The Master: I see by the exhibit that in the year ending 1919, December 31st, they use 16 lbs of coal and seven tenths of a gallon of tar. That would make it over 25 lbs. 283
>
> "The Witness: Yes.
>
> "The Master: That is pretty high, isn't it?
>
> "The Witness: That is what they use." (p. 431.)

284

This testimony throws some doubt on the question whether exhibit 64 does not have the equivalent of 25 lbs. of boiler fuel used. We, however, have assumed for the figures below, that only 22 lbs. were used. If 25 lbs. were used, then the saving would be even greater than we contend.

In the case of *Consolidated Gas Co.* v. *Newton, et al.*, Engineer Wood testified for that company that 14 lbs. per M were sufficient. Here, while testifying for respondent, he stated that 22 lbs. were necessary (p. 429). He was confronted with his testimony in the Consolidated Gas Company 285

Net Earnings in Year 1919 as Claimed by Appellants 291

296

POINT V

THE COURT BELOW ERRED IN FAILING TO FOLLOW THE RULES LAID DOWN BY THIS COURT THAT IN DETERMINING THE FAIR VALUE OF RESPONDENT'S PROPERTY, DEPRECIATION SHOULD BE DEDUCTED.

297 The Court below has accepted the book figures of respondent showing actual cost as the fair value of respondent's property. The Court below makes no deduction for the decrease in the worth of the property due to such well known causes as wear and tear, obsolescence and in-

298 adequacy.

This is in direct conflict with common experience as well as the decisions of this Court for the depreciation of property is a fact, and its decline in value starts, as this Court has said, from the very moment it is put into use and continues until it is finally withdrawn from service.

299 Such depreciation is due to causes which have nothing to do with the cost of the property or book entries, or where the money comes from. Depreciation is a physical fact brought about largely by physical conditions, but also by changes in the art, changes in operating conditions and by the growth of cities. Whether

300 the item cost $50,000 when new, or would cost now $100,000, or whether the money was provided out of earnings or invested by the bondholders is wholly immaterial; the property depreciates regardless of these factors. They may influence the amount of depreciation, it is

true, but they do not have anything to do with 301
the question of whether depreciation should be
deducted in determining fair value.

The appellants contend that a deduction should
be made in determining fair value, not because
the property has been in existence for some
years, but because its value has decreased, due
to causes that are real, and that the amount of 302
decrease is generally measured by the relation of
the period for which each item or class of sim-
ilar items have been in use to the total useful life
of the property. In other words, as Mr. Maltbie
said when on the witness stand, age is a measure
of depreciation and not necessarily a cause. Upon
the other hand, respondents contend, and appar- 303
ently the Court so finds, that no matter how long
a thing remains in use, its value is its cost up to
the very moment that it passes out of use. In
other words, in one moment, the instant when
property is finally withdrawn from service, its
value passes from 100 per cent. to zero.

The falsity of the Court's conclusion, that a 304
company is entitled to a return upon its "invest-
ment" without deducting anything for depreciation,
even the needed repairs and renewals, may
be shown in another way. Assume that the stock
and bondholders of a company did invest $10,-
000,000 in cash in physical property, does it fol-
low that the security holders are entitled to a 305
return upon $10,000,000 as long as the company
operates, without regard to the condition of the
property, the probable remaining useful life of
this property or the amount required for the re-

pairs and renewals which would be necessary to place it in what the company contends would be 100 per cent. operating condition.

The rule of law is clearly established that a company is not entitled to a return upon the actual cost of the property or upon the reproduction cost or upon any other measure of the cost of property WHEN NEW.

The rule in the Federal courts and in the courts of this State is the same — namely, that consideration must be given to the condition of the property and that deduction must be made from cost for the accrued depreciation.

The principal recent case upon this point in New York State is *People ex rel. Kings County Lighting Co.* v. *Willcox, et al.*, 156 App. Div. 603, modified in 210 New York, 479. This case is not only important from the standpoint of the rule laid down that accrued depreciation must be deducted, but because of the strenuousness with which it was contended that there should be no deduction for any depreciation and because of the fact that the decision, which the Kings County Lighting Company undertook to overturn, held positively that the straight line method should be followed in determining accrued depreciation, and that depreciation due to every cause, including inadequacy and obsolescence, as well as wear and tear and other causes, should be deducted. This is the very method used by Mr. Hine in this case.

In that case, the Appellate Division upheld the Commission ruling that accrued depreciation

should be deducted from cost new in determining 311
fair value. The Court said (pp. 610–612):

> "The Commission said 'cost of reproduction new is not necessarily an indication of present value. Depreciation and deferred maintenance are important factors. It held that the proper method to ascertain the value of the tangible property was to take the amount obtained by subtracting from the cost of reproduction its accrued depreciation, and therefore from its estimate of reproduction cost new, subtracted $415,198 for depreciation.
>
> "The relator contends that this method is fundamentally unsound; that said sum should not be deducted, but that the true rule is that the company is entitled to earn a return on the full 100 per cent. service value of its investment; that the fair value for rate-making purposes is equal to the total cost of reproduction less scrap value, without any deduction whatever for accrued depreciation; that, therefore, the Commission's total valuation is in error to the extent of the difference between said amount and Mr. Connette's total of scrap value $183,150, or making in round numbers an amount of $230,000, which would be added to the total valuation."

The Court did not agree with this proposition, but pointed out that there must be a deduction for accrued depreciation and that such an allowance had been made in various cases of this kind. The Court approved the amount of accrued depreciation deducted by the Commission on the

straight line basis and said that this was proper.

To the same effect is the *Knoxville Water Co.* v. *Knoxville*, 212 U. S. 1. In that case Justice Moody delivered the opinion of the Court. He said (p. 10):

> "The cost of reproduction is not always a fair measure of the present value of a plant which has been in use for many years. The items composing the plant depreciate in value from year to year in a varying degree [illegible] the mains, the service pipes, structures upon real estate, stand pipes, pumps, boilers, meters, tools and appliances of every kind begin to depreciate with more or less rapidity from the moment of their first use. It is not easy to fix at any given time the amount of depreciation of a plant whose component parts are of different ages with different expectations of life. But it is clear that some substantial allowance for depreciation ought to have been made in this case."

In the case of *Spring Valley Water Works* v. *City & County of San Francisco*, 192 Fed. Rep. 137, pp. 184, 186, Judge Farrington said:

> "Depreciation may be delayed, but it cannot be prevented. Ultimately every structure in complainant's plant will be worn out by use, wasted by action of the elements, broken by accident, abandoned in the development of the system, or displaced by newer and more efficient contrivances. In view of this fact, it was held in the 1908 case that complainant was entitled to an annual allowance to cover such loss. The highest

courts have repeatedly declared this fact 321
cannot be ignored in determining the value of property in rate cases.

In *Knoxville Water Co.* v. *City of Knoxville*, 212 U. S. 1, * * * and more recently in *Contra Costa Water Co.* v. *City of Oakland* (Cal.), 113 Pac. 668, the lower court found the present cost of reproducing the plant, but failed to take into account the fact 322
that an old plant is worth less than a new one. In each, the result was a reversal.

It is impossible to measure accurately such loss until it has matured. When a machine is worn out, we know its original value is gone; but while the machine is in use the amount of deterioration is largely a matter of opinion. Here the difficulties of the problem 323
are increased by the fact that a very large portion of the most valuable construction, such as pipes, masonry and concrete work, are concealed in the ground or under water. * * *

I find the annual depreciation of this plant to be 1 per cent. per annum for cast-iron pipe, 2 per cent. for wrought-iron pipe, 2.5 per cent. for pump engines, flumes and wooden structures, and 5 per cent. for boilers. Thus I have ascertained the annual depreciation to be $212,983. 324

The total depreciation to be deducted from the reproduction cost of structure is $2,929,538. This I have ascertained by multiplying the annual depreciation of each structure for the number of years it has been 325
in use, using original cost as the basis of calculation."

Mr. Maltbie and Mr. Hine testified as to accrued depreciation or the amount that should be

326 deducted in determining the fair value of the property due to the decrease of the useful life of such property. Mr. Mahlbie testified as to the general principles according to which depreciation should be computed (pp. 1227, 1232). Mr. Hine gave detailed testimony explaining fully the methods which he used (pp. 1180-1182). Both
327 defined depreciation as the term is generally used and as used, by them, to be decrease in worth or value due to all causes, such as wear and tear, decay, inadequacy and obsolescence.

The method which Mr. Hine used to measure depreciation as thus defined was as follows: In the first place, the age of each item of property
328 was determined, or, if the age could not be determined, the probable remaining life was estimated. Next, an estimate was made of the probable useful life in service of each class of property, and the annual allowance for depreciation was then computed on the straight line basis. Thus, if an item of property had an estimated life of ten years and was five years old, the annual depre-
329 ciation would be taken as one tenth of the normal reproduction cost and the accrued depreciation would be five times the annual depreciation, or fifty per centum of the normal reproduction cost, assuming there is no salvage value.

Respondent contends that Mr. Hine's method is theoretical and does not take into account actual conditions, and the Master seemed to labor
330 under somewhat the same delusion. As a matter of fact, Mr. Hine's estimates of accrued depreciation were based upon actual conditions and in order to determine the probable useful life of

each item of property he had studied the experi 331
ence of the respondent, of all other gas companies within the city of New York and of many gas companies elsewhere. He testified that the property was maintained in fairly good operating condition and that his estimates are based upon the assumption that the practice will be continued.

We again call attention to the decision of the 332
Appellate Division in *The People ex rel. Kings County Lighting Co.* v. *Willcox, et al.*, case (quoted above), particularly to the brief submitted by counsel in that case, and to the record itself.

Mr. Maltbie, as a member of the Public Service Commission for the First District, wrote the opin- 333
ion of the Commission in that case from which an appeal was taken to the Appellate Division. The method followed for determining accrued depreciation by the experts of the Public Service Commission when the case was before that body, and the method used by the Public Service Commission in its decision, were the same as that followed by Mr. Hine in this case — namely, the 334
straight line method based upon the relation of age to probable total life.

The decision of the Commission was attacked by counsel for the *Kings County Lighting Company* before the Appellate Division as to the reasonableness of the method and the correctness of the findings of fact. Counsel for other utility 335
companies submitted a long brief upon this subject, contending that no deduction should be made for depreciation beyond deferred mainte-

336 nance. The decision of the Appellate Division was eleanent and conclusive. The court repudiated the theories of counsel for the utility companies and sustained the decision of the Commission both upon points of law and of fact. It is significant that although an appeal was taken from the decision of the Appellate
337 Division to the Court of Appeals upon certain of the conclusions of law reached by the Appellate Division, there was no appeal from the rulings as to depreciation and they stand as the law of the State of New York.

As Mr. Maltbie pointed out in his testimony, the value of a thing depends upon the amount of
338 useful service which it will render. This decreases as time passes, and consequently its value must likewise decrease and is at 100 per cent only at the moment it is put into use.

Mr. Justice Moody, in the case of *City of Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 10, calls attention to this fact in the following language:

339 "The items composing the plant depreciate in value from year to year in a varying degree. Some pieces of property, like real estate for instance, depreciate not at all, and sometimes, on the other hand, appreciate in value. But the reservoirs, the mains, the service pipes, structures upon real estate, standpipes, pumps, boilers, meters, tools and
340 appliances of every kind begin to depreciate with more or less rapidity from the moment of their first use. It is not easy to fix at any given time the amount of depreciation of a plant whose component parts are of different ages with different expectations of life.

But it is clear that some substantial allowance for depreciation ought to have been made in this case. The officers of the company, *alio intuitu*, estimated what they called 'incomplete depreciation' of this plant (which we understand to be the depreciation of the surviving parts of it still in use) at $77,000, which is 14 per cent of the master's appraisement of the tangible property. A witness called by the city placed the reproduction value of the tangible property at $3,703,983, and estimated the allowance that should be made for depreciation at $118,000, or 32 per cent. In the view we take of the case it is not necessary that we should undertake the difficult task of determining exactly how much the Master's valuation of the tangible property ought to have been diminished by the depreciation which that property had undergone. It is enough to say that there should have been a considerable diminution, sufficient at least to raise the net income found by the court above 6 per cent upon the whole valuation thus diminished." 341 342 343 344

The court in the decision of *Brooklyn Heights R. R. Co.* v. *State Board of Tax Commissioners*, 69 Misc. 646 (page 656 says):

"As surely as humanity travels to the grave, the machinery and equipment of a public service corporation travels toward the scrap pile. The plant and structures depreciate in less degree but as certainly. This is ordinary depreciation. 345

But another form of depreciation in the case of properties here being valued takes place. The machinery or equipment, while still capable of years of service, becomes in-

346 adequate to do the work demanded — not only by the corporation, but by the law itself. In the case particularly of electrical machinery the type becomes obsolete by reason of invention, and increasing public demands frequently require in aid of safe and adequate service that the obsolete appliance or equipment give way to the new. Property which in itself may be almost indestructible
347 in the hands of a public service corporation may be required to be replaced by the requirements of the public which the corporation serves. These requirements for change of plant, structure and equipment and their replacement, can be and are made by the State itself. Some of these changes are
348 capable of definite ascertainment. Others are not so readily ascertainable. Many of them, however, may be provided against for the future by setting apart from gross earnings a reasonable sum to create a reserve against the day when they shall come."

In the recent decision by ex-Justice Hughes as
349 referee in the *Brooklyn Borough Gas Company v. Public Service Commission*, 17 N. Y. State Department Reports, 81, the expert for the company testified as to observed depreciation and allowed a small amount comparable with the amount estimated by Mr. Miller in the present case. Mr. Justice Hughes was asked to limit the amount of depreciation deducted to observed de-
350 preciation. This he refused to do, saying:

> "As was said by the Court of Appeals in the case last cited (Kings County Lighting Company): 'The cost of reproduction less accrued depreciation rule seems to be the one generally employed in rate cases. But

it is merely a rule of convenience and must 351
be applied with reason. ' ' The only
evidence apart from the plaintiff's books is
the testimony of Mr. Shattuck, the plaintiff's
expert' but this relates only to the depreciation he observed. He conceded that there was depreciation or deterioration of the property not covered by ordinary repairs and that he had not given consideration to 352
it in his appraisal. In the absence of any counter vailing evidence, the depreciation in the plant may fairly be taken at the amount shown in the books, and if the attacked rate permitted an adequate return after making such allowance, there would be no ground for asserting confiscation; and whether the rate is confiscatory is the question here. ' 353

The attention of the Court is also called to the fact that the accrued depreciation allowed in that case was based originally upon the findings made by the Public Service Commission, Commissioner Mathbie writing the opinion, which in turn were based upon an appraisal made by Mr. Hine in a 354
rate case. The record before the Public Service Commission shows that accrued depreciation was estimated by Mr. Hine by the same method followed by him here. Ex-Justice Hughes' opinion, when read in the light of these facts, is a decision strongly supporting the claim made by appellants and repudiating the claim made by respondent.

The court below failed to deduct anything for 355
depreciation and in this, we claim he committed reversible error.

Assuming that our interpretation of the law is correct, and that depreciation due to all causes should be deducted in determining the fair value

of property, we call attention to the fact that there is no testimony except that of Mr. Hine as to the reasonableness of the amount of such depreciation, and appellants contend that the figures given should be taken as the proper amount of depreciation to be deducted. The figures given represent the value of the property after accrued depreciation has been deducted, and appellants contend that the decree should be set aside and that the evidence given by witnesses for appellants should be taken as determining the fair value of the property.

POINT VI.

WORKING AND CONSTRUCTION CAPITAL, ORGANIZATION, AND UNDISTRIBUTABLE STRUCTURAL ITEMS, GENERALLY CALLED "OVERHEADS" ARE LESS THAN $100,000.

Working and Construction Capital

The company has a right to have included in the value of the property which it gives to the public service a certain sum which shall be adequate for its working and construction capital.

This represents moneys advanced by the utility, other than fixed capital defined in the Uniform System of Accounts as property with a probable service life of more than one year, for which it is reimbursed when revenue is collected.

In his opinion, the Master states:

> "Taking into consideration the various elements which are and must be provided for in arriving at the necessary amount of working capital, I have reached the conclusion that $125,000 would be a fair sum to be allowed for working capital" (p. 56).

The Court below, in reviewing the Master's report, did not pass upon the reasonableness of this allowance, but determined the value of the property in a lump sum, saying: 361

> "All other findings touching the rate base have become immaterial to this case" (p. 115).

362

And again:

> "All exceptions filed by the defendants and not herein before referred to are not passed upon because immaterial to this decision" (p. 118).

The Master's report therefore, respecting this item, was not affirmed by the Court below. 363

Witness Malthie testified the sum of $70,000 was ample (pp. 1214-1219).

He was subjected to severe cross-examination (pp. 1261-1285), but his result was unshaken. His experience, knowledge and fair dealing with public utilities covering a long period of time 364 should be accepted in preference to witness Miller who testified on this item for the respondent.

It must be kept in mind that his item of $70,000 includes construction capital as well as working capital. The phrase is intended to mean the amount of money or its equivalent in property 365 which the company must provide in advance of the time when it will be reimbursed by the consumers of the gas company either in the way of payments for gas or in payments for the rental of appliances.

366 The respondent's witness Miller estimates $165,000 as the requirement for working capital, made up as follows:

Materials and supplies	$60,000
Cash in office and banks	50,000
Accounts receivable	35,000
367 Gas furnished to consumers, but not yet billed	20,000

(p. 567.)

Respondent's witness Miller must have felt uncertain about these figures, for after stating
368 the same he qualifies them by this statement (p. 567):

> "*This amount is more of working capital than the company has had* but it is no more than the company needs and should have in view of the present prices of materials, supplies, labor etc. The fact that in other years the company has struggled along under the
369 present statutory rate with an amount less from time to time that without the amount now shown should not control the amount proper to be allowed in view of the present level of prices."

There is no evidence whatever either in the record or in the books of the company that the
370 amount set forth for materials and supplies, cash, accounts receivable and gas furnished, averaged or equaled Mr. Miller's figures. An examination of defendants' Exhibit A-8, from 1906 to 1919, inclusive, indicates that at no time have any of these items equaled or nearly

equaled the amount now demanded by the respondent company as proper sums to make up the working capital allowance. 371

Respondent's witness Miller endeavors to sustain his amount for working capital in the sum of $165,000 to the effect that the company require or should have fifty cents a thousand cubic feet for working capital. 372

The Master very well stated how preposterous and ridiculous was such a requirement (p. 917):

> "The Master: Well, I never ran a gas company but it does seem high to me that a concern doing a business of $330,000 to $340,000 a year should have $150,000 working capital." 373

The Master has neither in his findings or opinion given any indication as to how he arrives at the amount of $135,000. There is no evidence to sustain an amount beyond that testified to by appellant's witness Maltbie.

A consideration of the foregoing figures and the evidence confirm the fact that the $70,000 as testified to by witness Maltbie is correct and fair. 374

Organization — Legal, General and Preliminary Expenses

We contend that for organization, legal, general and preliminary expenses prior to August 1, 1904, and on the basis of what the books themselves show for expenses incurred since that time, there should be allowed a maximum amount of $10,000. 375

376 In respondent's witness Miller's exhibit (No. 66, p. 5861), there is set out $135,000 " for organization and development expenses prior to construction."

This item includes numerous other expenditures and there is no separation whatever as to any value for " franchises," or of the cost of

377 the same.

We refer to his testimony (pp. 847-849):

" Q. Your item for organization and development expense prior to construction is an estimate on your part? A. Yes, an estimate based on my experience.

" Q. How did you make up that sum of

378 $135,000?

" Mr. Ransom: Objected to on the ground that the notes fully show.

" Mr. Chambers: The notes do not do anything of the kind.

" Mr. Ransom: It states the basis, and the detail of the things that go into it.

379 " Mr. Chambers: I want to know what the details are. I think we are entitled to have it. If the Master rules it out, all right.

" The Master: Are the details set forth on that exhibit, Mr. Miller?

" The Witness: In general description. There is a general description of that here.

380 " Q. There is nothing but the lump sum of $135,000, is there?

" The Master: Let us see it. I sustain the objection to the question as put. You can ask him any more details that you want.

" Q. You have put something in for services of sponsors. What do you mean by that? A. I mean the people who stand behind the

enterprise. You may call them the pro- 381
moters or such persons as get up the enterprise.

"Q. How much did you allow for those fellows? A. I have not subdivided it. I have had items of this kind run all the way from five to fifteen per cent of the whole enterprise. In this case the amount is something less than five per cent. I have not attempted 382
to subdivide it.

"Q. You allow something for local consents—how much for that? A. I have not subdivided it at all.

"Q. How much did you allow for franchises? A. The same answer.

"Q. Supposing they did not pay anything for their franchises, you would allow some- 383
thing anyway?

"The Master: Who is 'they'?

"Mr. Chambers: Any of the companies.

"Q. If nothing was paid for these franchises you would still have allowed something, would you? A. *Nothing has been allowed to any amount in this case.* If I had 384
put in anything actually for franchises I should have put in a considerably higher amount. The franchise had a greater value.

"Q. You say the $135,000 includes franchises? A. I do not say any actual payment.

"Q. You don't know anything about whether they made any or not? A. I do not. I think in all human probability they paid 385
more than this amount in the case of this company.

"Q. What is this amount? A. $135,000.

"Q. For franchises? A. No, *for everything*, for the amount which I have allowed and which I say I have not subdivided.

386 "Q. Does it include anything for franchises or not? A. If anything was paid it is intended to include it.

"Q. Mr. Miller, you made this up? A. I made it up.

"Q. And you said amount the items was franchise? Did you allow, or did you not allow, anything for franchises? A. I have stated that I have allowed about five per cent

387 *to cover the preliminary expense*, and which in my opinion carries anything that was probably actually paid to the local authorities. I don't know whether they paid anything or not.

"Q. Did you make any investigation to determine what they paid the local authorities?

388 "Mr. Ransom: I object to this line of inquiry.

"The Master: Objection overruled.

"Mr. Ransom: Exception.

"Q. Did you? A. Not to the local authorities. The books show a very large payment

389 for franchises.

"To whom? A. To the predecessor company.

"And you treated that as a payment for franchises? A. I did not. That was an amount of something like a million dollars, and we are discussing a figure of $135,000.

390 "Mr. Ransom: Counsel is failing to distinguish between the expenses incurred in the obtaining of a franchise, and payment for a franchise.

"By the Master:

"Q. You say the books show a payment of a million dollars for franchises? A. The

books opened with a million dollar item for 391
franchise.

"Q. Do the books show a payment for franchises? A. They do not show any cash payment, but they open with an item of a million dollars and something for franchises, and against that stocks and bonds were issued.

"Q. There were only $600,000 of stock 392
and $800,000 of bonds altogether? A. The opening entry shows a very large item on franchises and property.

"The Master: Is that opening entry here?

"Mr. Ransom: No, the original book is not here.

"Q. Is it your testimony that anything 393
you found on the books justifies you in the statement that they paid a million dollars for franchises? A. No, I don't believe they paid that. I know there was a great deal of real property in that account, from my own investigation.

"By Mr. Chambers:

"Q. That was an opening balance, was it, 394
that is all? A. That is all.

"Q. Or a balancing entry? A. Well, it was an opening entry.

"Q. Wasn't it a balancing entry? A. It probably was. They probably lumped the whole plant in it."

As was testified by defendants' witness Malt- 395
bie (p. 1212), and undisputed in the record, there has been no items charged since 1902 to the fixed capital account for "organization, legal and general expenses" and as further testified to by the witness Malthie if the legal expenses were incurred they were charged as an operating expense and the operating expenses so show.

Franchises

396 The company is not entitled to any return on "franchises." The weight of authority is to the effect that the "franchise" value should be excluded from the property upon which the company is entitled to a return.

397 *Springfield Valley Water Works Co.* v. *City of San Francisco*, 192 Fed. Rep. 137.
Cumberland T. & T. Co. v. *City of Louisville*, 187 Fed. Rep. 657.
Home Tel. Co. v. *City of Carthage*, 159 So. West. 547.

398 Treating the question generally as to whether the value of "franchises" should be included or excluded from the property upon which the company is entitled to a return, we have but to recall the opinion of Judge Hough in the Consolidated Gas Company case, wherein he says in answer to the company's contention that the
399 franchise value should be included:

> "As a general proposition I believe this claim unsound." *Consolidated Gas Co.* v. *City of N. Y.*, 157 Fed. Rep. 849, at p. 873.)

Respondent rests its contention as to the inclusion of the franchises upon the opinion of the
400 Supreme Court in the first Consolidated Gas Company case, but as concerns such a proposal we respectfully ask that the entire opinion be read and special attention given to the following language in said opinion:

> "What has been said herein regarding the

value of the franchises in this case has been necessarily founded upon its own peculiar facts and the decision therein can form no precedent in regard to the valuation of franchises generally, where the facts are not similar to those in the case before us. We simply accept the sum named as the value under the circumstances stated." (*Willcox v. Consolidated Gas. Co.*, 212 U. S. p. 48.) 401 402

The case of *Lincoln Gas and Electric Co. v. The City of Lincoln*, 182 Fed. Rep. 926, follows the general rule, excluding franchise value.

District Judge W. H. Munger, in explaining the exclusion of franchise value, says (p. 928):

"I do not allow anything as the value of complainant's franchise; it does not appear from the allegations of the bill or proofs that anything was paid to the city for the franchise; the city simply granted to complainant, without compensation, the right to use the public streets and the alleys for the purpose of constructing and operating its plant. This was a mere right and privilege to complainant and did not involve the expenditure of money; while it is true a franchise is a property right, which will protect complainant in its use of the streets and alleys for the purposes expressed, yet it involves no investment of money, complainant's investment being in its tangible property under authority of the franchise, and the public ought not to be taxed for a privilege which it has voluntarily granted. I do not think that there is anything in the case of *Willcox v. Consolidated Gas Company*, 212 U. S. 19, which conflicts with this view." 403 404 405

Likewise there is the *absolute prohibition* against the capitalization of franchises as found

406 in Section 69 of the Public Service Commissions Law of New York:

> "§ 69. *Approval of issues, stock, bonds and other forms of indebtedness.* * * * Provided, however, that the Commission shall have no power to authorize the capitalization of any franchise to be a corporation
407 or to authorize the capitalization of any franchise or the right to own, operate or enjoy any franchise whatsoever in excess of the amount (exclusive of any tax or annual charge) actually paid to the state or to any political subdivision thereof as the consideration for the grant of such franchise or right * * *."

408 In the recent case of *Bronx Gas and Electric Company* v. *Public Service Commission*, 190 App. Div. 13, at page 25, Mr. Justice Page says:

> "We observe also that the plaintiff seeks to have its franchise included in its property upon the value of which an adequate return is to be estimated. It has been repeat-
409 edly held, and is now settled, that the franchise which is obtained from the State is not property devoted to the public use, upon the value of which it is entitled to a return from the rate charged for its service."

410 There is no proof whatsoever in the record as to the cost or value of the franchises *or of any sums paid or required to be paid to the local authority where the respondent operates.* This is very clearly shown (pp. 846-849, 818) when respondent's witness Miller was on the stand under cross-examination pertaining to complainant's Exhibit No. 66.

"The Master.—What proof is there in 411
the record as to franchises?

"Mr. Ransom.—The books.

"The Master.—Only that.

"Mr. Ransom.—So far, and the franchise documents.

"Mr. Neumann.—What do the franchise 412
documents show, the price?

"Mr. Ransom.—They speak for themselves."

And again (p. 1236):

"The Master.—Was there proof offered of the cost to reproduce the franchises? 413

"Mr. Ransom.—Well, of course, the Miller exhibit in that respect related to the tangible property and the so-called non-distributed structural cost in connection with the tangible property.

"Mr. Neumann.—I understood Mr. Miller especially excluded franchises from repro- 414
duction cost.

"The Master.—What I am trying to get at is, what basis have I for valuing franchises?

"Mr. Neumann.—None at all.

"The Master.—I am asking Judge Ransom something, Mr. Neumann. 415

"Mr. Ransom.—I take it that from all of the evidence in this case, the testimony of Col. Miller which related to that point, the evidence shown by the books the evidence as to the acquisition of the property in 1904 and what was paid therefor, the judgment of the

416 Board of Directors as to the value to be put upon those so-called intangibles — it is not a simple question, it is not a matter which has been adjudicated it was the situation as to the value of the franchises and rights in the Consolidated case.

"The Master — That is what bothers me.

417 "Mr. Ransom. — I am fully aware that it is a difficult question."

Interest and Taxes During Construction

The amount for interest and taxes during construction cannot exceed $6,700. As testified to by appellants' witness Maltbie there were no charges for interest and taxes during construc-
418 tion as shown by the books of the company from 1904 to near the end of 1915. Near the end of 1915 there is an item as shown by defendants' exhibit A-92 of $402.97. It was an estimate based upon the amount of fixed capital in 1904, there should be allowed the sum of $5,000, to which should be added the item found in the books near
419 the end of 1915, and an item found in the books in 1919, which is a charge of $1,152.32, all as shown in complainant's exhibit A-93, for interest on money borrowed from Consolidated Gas Company, which amounts in round figures to a total sum as of December 31, 1919, of $6,700 (p. 1219).

Omissions and Contingencies

420 We contend that there should be no specific amount allowed for omissions and contingencies, and refer to the testimony of defendants' witness Maltbie (p. 1220):

"The Master.— * * * In arriving at a figure for reproducing property new in 1904,

or any other time, would you allow or should there be in your opinion included an item for omissions and contingencies? 421

* * * * * * *

"The Witness.—Whether there is anything to be allowed for an omission depends on the carefulness with which the inventory has been prepared. 422

"The Master.—Precisely."

And (p. 1221):

"By the Master:

"Q. * * * I will permit you to answer whether if you were making up a statement of this kind you would include omissions and contingencies." 423

And again (p. 1221):

"A. Not in cost, because the cost is shown by the books. You have everything in it.

"Q. No, but in estimating reproduction cost? A. In estimating reproduction cost it would depend upon the care with which the 424
inventory had been made. *In some inventories I should make a deduction for duplications rather than an addition for omissions.*

"Q. And in some other instances, it might be proper to allow for omissions and contingencies? A. Well, in some other cases, your Honor, some allowance might properly 425
be made for omissions. Now, contingency item is usually covered in the unit prices which are allowed and not as a separate item, and it would depend upon the character of the work.

"The Master: Well, we have had enough of that. Take the next one."

426 POINT VII.

THE FAIR VALUE OF RESPONDENTS' PROPERTY DEVOTED TO THE MAKING AND DISTRIBUTING GAS AND UPON WHICH IT IS ENTITLED TO A FAIR RETURN, DOES NOT EXCEED THE FOLLOWING AMOUNTS FOR THE RESPECTIVE YEARS.

427

December 31, 1906.....	$402,711
December 31, 1907.....	434,253
December 31, 1908.....	467,593
December 31, 1909.....	503,470
December 31, 1910.....	536,825
December 31, 1911.....	584,825
December 31, 1912.....	615,422
December 31, 1913.....	639,099
December 31, 1914.....	672,132
December 31, 1915.....	751,772
December 31, 1916.....	831,867
December 31, 1917.....	867,871
December 31, 1918.....	871,874
December 31, 1919.....	898,545

428

429

As of January 1, 1920, and the present time the Master found (Finding 34, p. 41) that the fair value of the property on which the respondent company was entitled to have a fair return exclusive of working capital to be at least the sum of $1,220,873 34, composed of the following items:

430

1. "Tangible and intangible property acquired at the end of July, 1903, and still owned and used by it on January 1, 1920, exclusive of working capital". $670,488 86

431

2— " Additional land, plant, apparatus, mains and other property, less withdrawals, since August 1st, 1904, and exclusive of working capital " $850,389 08

Total $1,520,877 94

432

When the case came on before the District Court, appellants successfully convinced the court that this finding of the Master was erroneous. Since respondents have filed no assignment of error nor taken an appeal from the decree of the lower court, modifying the Master's finding, we shall not further discuss what the Master found on the question of valuation. 433

The District Court said in modifying the Master's report:

> " The actual cost of the tangible property aggregates $1,130,497.08 (p. 115) * * * Thus, the sum of $1,130,497.08 is the absolute minimum of actual investment and I hold also, on the evidence in the case, that it is the minimum of reproduction value " (p. 115). 434

Appellants have shown that the Court below was in error in finding that there was not a sufficient return in the year 1919. Hence it is necessary to determine a rate base or valuation for the whole period. For convenience we have divided the above point into two subdivisions; (a) the fair value for the years 1906 1918; and (b) the fair value for the year 1919. 435

(a) *Fair value of respondent's property used and useful and upon which it is entitled to a return for years 1906 1918 inclusive.*

Since the appellants contend that the whole

436 period should be adopted for the purposes of this case, it is necessary to determine a rate base or valuation for the same period so as to properly find the return enjoyed year by year.

REAL ESTATE.

The actual cost of the land as appearing on
437 respondent's books is shown by respondent's Exhibit 96 (p. 1605-1606). This exhibit shows the cost of land, plant, etc., acquired by the respondent on August 1, 1904 (estimated as of that date), land, $19,423.00.

The exhibit further shows the "cost of additions to real estate, 1904-1920" as follows:

438

Description	Date of Acquisition	Cost
Plot "A"	1909	$1,200 00
Plots "B" "C" and "D"	1911	5,901 25
Plots "E" and "F"	1912	1,128 00
Plots "G" and "H"	1915	12,388 39
Sundry	1917	13 26

439

$20,630 90

Thus the actual cost of the land as shown on the books of the company totals $40,053.90 and includes attorney's fees, expenses for title examination (p. 1120) and all other expenses in connection with the acquisition of land.

440 The Court below, in adopting the actual cost from the books of respondent undoubtedly found the cost as its present value.

Appellants sought to introduce testimony from qualified witnesses, deputy tax commissioners, showing the fair market value of the land during the years 1904-1920 inclusive.

Appellants' witness, Mr. Walsh, was not allowed to testify as to the value of the land in early years, the Master saying 441

> " I do not think we need any more testimony of deputy tax commissioners as to values in this case (p. 1119).

This we contend was error on the part of the Master. 442

The evidence of appellants' witnesses allowed by the Master shows the fair market value of the land is as follows:

1909.....	$6,650.....	(p. 1082)
1910.....	6,650.....	(p. 1082)
1911.....	12,200.....	(p. 1083)
1912.....	12,600.....	(p. 1083) 443
1913.....	12,600.....	(p. 1083)
1914.....	12,600.....	(p. 1083)
1915.....	12,600.....	(p. 1083)
1916.....	13,300.....	(p. 1096)
1917.....	13,600.....	(p. 1096)
1918.....	13,600.....	(p. 1096)
1919.....	13,600.....	(p. 1096) 444
1920.....	13,600.....	(p. 1096)

Respondent introduced testimony respecting the value of its land by Mr. Thomas Halloren, who placed a valuation of $55,000 on the various parcels (p. 301).

The Master said regarding the value of the land

> " In my opinion it is worth less than Halloren says it is * * * (p. 1114). 445

We point out these facts which conclusively show that in adopting the book figure of actual cost of land, the Court below has been very liberal to respondent, and unquestionably adopted an excessive valuation for the land of the respondent.

446 FIXED CAPITAL, OTHER THAN LAND.

The evidence as to the fixed capital, other than land, for the period 1906 to 1918 inclusive, of former Chief Gas Engineer of the Public Service Commission Willard F. Hine, witness for appellant, stands uncontradicted. The respondent offered no evidence of the value of its prop-
447 erty prior to the year 1919, relying upon a valuation placed upon its property of that year alone.

Mr. Hine, after making a careful examination and study of the books, vouchers and other data of respondent, found the uncontradicted average valuation of the tangible property of respondent,
448 excluding land, for the years 1906 1918 as follows:

Year	
1906	$346,288
1907	377,830
1908	408,170
1909	437,847
449 1910	466,202
1911	507,582
1912	542,770
1913	561,447
1914	589,480
1915	656,732
1916	731,327
450 1917	762,318
1918—including Douglas extension	761,321

(Exhibit A109 corrected upon the trial by deducting $33,444 typographical error—p. 1877.)

The foregoing figures are taken from Exhibit A109, p. 1877, corrected upon the trial by deducting for each year the sum of $33,444, occasioned by a typographical error made in addition when the tables were made up (pp. 1332, 1333). 451

For the convenience of the Court we set forth below appellants' rate base for the years 1906–1918, inclusive: 452

453

454

455

460 459 458 457 456

AVERAGE RATE BASE, 1906–1918

	1906	1907	1908	1909	1910	1911	1912
Land, cost per compt's Ex. No. 96 pp. 1606-1607	$19,423 00	$19,423 00	$19,423 00	$20,623 00	$20,623 00	$26,524 25	$27,652 25

Working capital, Ex. "A" 112, p. 1880	35,000 00	40,000 00	40,000 00	45,000 00	50,000 00	650,000 00
Organization	10,000 00	10,000 00	10,000 00	10,000 00	10,000 00	10 000 00
Interest and taxes	5,000 00	5,000 00	5,000 00	5,500 00	5,500 00	5,500 00
Franchises						
Going v lue						
Total	639,099 25	$672,132 25	$751,772 64	$831,867 64	$867,871 90	$871,325 90
Douglaston extension						$549 00

(b) The fair value of respondent's property used and useful and upon which it is entitled to a return for the year 1919, does not exceed the sum of $898,545.90. 461

The Court below states

> "The actual cost of the tangible property aggregates $1,130,497.08" (p. 115).
>
> "Thus, the sum of $1,130,497.08 is the absolute minimum of actual investment, and I hold also, on the evidence in the case, that it is the minimum of reproduction value" (p. 115). 462

It will be seen therefore that the Court below accepted the actual cost of respondent's property as shown by the books of the company, as the fair value of its property. 463

The Court made no allowance for decrease in worth due to depreciation, which we firmly believe is contrary to the decision of this Court.

Further, in adopting these book figures, the Court includes in its rate base, the total cost of the Douglaston extension, so called. This extension was made pursuant to an order of the Public Service Commission of the State of New York for the First District on March 19, 1915, and required the respondent to extend its mains and services to the settlement known as Douglaston, about six miles from the respondent's plant. 464

Respondent strenuously opposed this order and took the necessary steps to review it successively in the following courts: Appellate Division of the First Department (171 App. Div. 580); Court of Appeals (219 N. Y. 84), and in this Court (245 U. S. 345). 465

The building of this extension was finally begun
466 in the year 1919 and put in operation in November, 1919.

Instead of costing, as originally estimated, about $80,000 to build the extension, the respondent resisted the lawful order of the Commission, until the cost of construction arose to about $1[illegible],000 in 1919 (Deft's Ex. A108, p. 1876), and $1[illegible],
467 000 up to May, 1920.

This enormous cost of constructing this extension at war prices so long resisted, has been accepted by the Court below, in the actual cost as shown by the books of the company, and the present consumers are made to pay an adequate return upon this costly extension, without waiting
468 a reasonable time for the company to develop the increased business resulting from the extension.

An indication of the new business, resulting in a large degree from this extension, is seen in the fact that the increase in gas sales in 1920 amounted to at least 15 per cent in excess of the sales during 1919.

469 The injustice of allowing, as against the present consumers, the full value of this unusually large and costly extension, without awaiting ample time to develop the business caused by it, is apparent. It is unfair to thrust upon the present consumers, the burden of paying a fair rate upon a large extension, soon to earn in itself a favorable return
470 and no doubt sufficient to forego a few lean months while the business is being annexed.

The appellants contend that the Court below erred in accepting the total book figure showing actual cost of this extension for the rate base in the year 1919. It would have been more equitable

to have spread such expense over a period of five years, and include only that portion of the gross expenditure in each of the years following 1919. 471

Mr. Hine, the former chief gas engineer of the Public Service Commission, after an exhaustive study of the books and other records of respondents, determined that the company's fixed capital, other than land, cost on December 1, 1919, the sum of $1,122,862 (Defts' Ex. A108 (corrected) p. 1876). This includes the cost of the Douglas extension made during the year. 472

The above figure is comparable with the figure found by the Court below of $1,130,497.08.

Mr. Hine then determined the average fixed capital of respondent as follows: 473

AVERAGE FIXED CAPITAL, INCLUDING ENGINEERING, 1919 (EXCLUSIVE OF LAND)

	Cost	Depreciation	Cost, less depreciation
Exclusive of Douglas extension	$973,546	$211,054	$762,492
Including Douglas extension of one-half cost	1,007,261	211,054	796,210
Including Douglas extension at cost	1,040,984	211,054	829,930

474

The above figures are taken from respondent's Ex. A116 (p. 1878), corrected upon the trial by deducting for each year the sum of $33,444, occasioned by a typographical error made in addition when Mr. Hine's table was made up. 475

It will be noted that the point of difference in the figures found by Mr. Hine and the figures found by the Court below lies in the fact that Mr. Hine has determined the *average* fixed capital

476 for the year, and deducted the sum of $211,054 for the accrued depreciation, while the Court below accepted the book figures as cost as of December 31, 1919, without any allowance for depreciation and applied that figure for the entire year of 1919. The method followed by the Court lacks the merit and the more equitable basis of Mr.
477 Hine's determination.

The foregoing figure of average fixed capital including engineering, 1919, should have added to it, the land $40,053.90, working and construction capital $80,000, organization $10,000, and taxes during construction $6,000. The figures will be as shown in the following table:

478 Rate base for year 1919.

Land	$40,053 90
Average fixed capital, etc.	762,492 00
Working and construction capital	80,000 00
Organization	10,000 00
Interest and taxes	6,000 00
479 Total	$898,545 90

and if the Douglaston extension is included at $67,438, making a total of $965,983.90.

POINT VIII.

480 **THE MASTER ERRED REPEATEDLY IN THE ADMISSION AND EXCLUSION OF EVIDENCE WHICH ERRORS WERE NOT CORRECTED IN THE COURT BELOW.**

It would be quite impossible for the appellants to point out all the errors committed by the Master in the admission and exclusion of evidence,

but we shall confine our remarks under this head- 481
ing to the most serious ones.

(1) *One of the important questions in the case was that of the delay in building of the so-called "Douglaston Extension," the additional cost occasioned by the delay and the exclusion from the rate base of the expenditure for such improvement.* 482

The Public Service Commission, one of the defendants in this action, offered an opinion of the Commission (Exhibit P, p. 1730), and the opinion of the Commission denying a second application of respondent for a rehearing (Exhibit U, p. 1748), in this matter which were excluded upon the Master's own motion. Yet at the same time 483
the Master allowed the petition and order in the second certiorari proceeding to be admitted in evidence (Complainant's Exhibits 110 and 111).

The exclusion of Exhibits P and U by the Master was arbitrary and upon his own motion (pp. 1280-1288).

484

"Mr. Neuman: I must object to striking it out at this time, after it has been received and now that he cannot get in what papers he wants, you cannot strike out our exhibit from the record.

"The Master: But I will, and allow you an exception. I will strike out Exhibit P. I think I was in error in allowing it in. 485

"Mr. Neuman: Exception.

"Mr. Cummings: Exception.

"The Master: I shall also reconsider my ruling as to Exhibit U.

"Mr. Neuman: I call to the Master's attention, that at this time there has been no

486 application of this kind made by the complainant, this is solely on the Master's own motion.

"The Master: Yes. Opinion denying the second application, in other words I am striking out opinions as distinguished from orders directing things to be done, and I
487 strike out this Exhibit U. I think I probably went too far in allowing P and U in, which are opinions of the Commission.

"Mr. Cummings: You are just letting in another one.

"The Master: Yes, I am letting that in because it contains the statement of a fact.

488 "Mr. Neuman: Well, those contain statements of fact.

"The Master: No.

"Mr. Neuman: Why, those contain the statements of fact as to what this Company was doing there, making a hippodrome out of the courts.

489 "The Master: Very well, I may be in error about it, but that is going to be my ruling.

"Mr. Neuman: There is no doubt about it that you are in error" (pp. 1325–1326).

(2) *Appellants were not permitted to introduce the evidence of Deputy Tax Commissioner*
490 *of the city of New York, concerning the value of real property for the years* 1906–1909 *unimproved.*

The appellants endeavored to show the value of the real property, land and buildings, as fixed by the tax officials of the city of New York.

The master *himself* interposed the objection to

the evidence without any request from the com- 491
plainant (p. 1119).

Also the testimony of Frederick A. Dede, a Deputy Tax Commissioner, was excluded (p. 1070).

The master made his conclusions concerning testimony of Deputy Tax Commissioner Patrick J. Cronin while on the stand: 492

> "The Master: I have said all along that this kind of testimony is valueless in this kind of a case.
>
> "Mr. Neuman: Yet you take it from Halleran.
>
> "The Master: I took it from them as I take it from you, but I am going to find out 493
> what this company has invested in this business and I am going to throw expert testimony out of the window" (p. 1103).

(3) *At times the master was unfair in the characterization of the testimony of appellant's witnesses.* 494

This is particularly true in the following instance (p. 1109):

> "The Master: Cohen's testimony was perfectly useless. It was simply a recapitulation of the books; there was no necessity for it.
>
> "Mr. Neuman: I must object to the Master's characterization of it at this time." 495

Yet the master accepted in *compact form* the testimony of the respondent's witness Miller, over the objection of the appellants as follows:

> "The Master: I think we all found in the Consolidated case that when we had a wit-

ness like Mr. Miller on the stand, who had
496 a speech to make, that it was quicker to take
his speech as he had prepared it than to ask
him questions and bring out the speech by
question and answer. The net result of an
examination of an hour or two will be that
this witness will testify to the matters stated
in these pages from two down to the ques-
tion of working capital, which this question
497 does not comprehend" (p 258).

Likewise, the master under objection of appel-
lants took over entirely the direct examination
of the defendants' witness Miller on a most im-
portant case, "values."

"The Master: And if you were asked par-
498 ticular questions relating to the particular
items would your answers be as set forth in
these pages?

"The Witness: Yes.

"The Master: In other words, are the
statements made in these pages now made
499 by you under oath, without repeating them
all?

"The Witness: Yes.

"The Master: So that you are swearing
to it?

"The Witness: Yes.

"Mr. Neuman: My objection goes, of
500 course, to all the Master's questions.

"The Master: I am asking him in the
same manner and to the same extent as I
would ask if particular questions were asked
to bring out these particular answers.

" Q. If interrogated by me regarding each 501
of these items of undistributed structural costs would you testify regarding each such item to the substantial effect shown in the corresponding note annexed to your summary statement?

" Mr. Neuman: That is already covered by the Master's questions, and our objection 502
and exception " (p. 259).

(4) *The master even went so far as to absolutely cut off the examination of witnesses:*

This was particularly true of appellant's witness Hine, who testified along the same line as that of respondent's witness Miller.

503

" Redirect examination by Mr. Tobin:

" Q. Mr. Hine, were you employed in the Public Service Commission at the same time that Judge Ransom was counsel to that Commission?

" Mr. Ransom: Objected to as immaterial.

" The Master: Objection sustained. 504

" Mr. Tobin: I do not know, I think you have given great freedom, if the Master please, to counsel on the other side to go into every phase and situation that might possibly exist here as to this witness' testimony, and immediately when we start to ask this question we are shut off.

505

" The Master: You can take your exception.

" Mr. Cummings: Well, we will. Ask another one.

" Q. Are you acquainted with the different gas-making machines, Mr. Hines?

506 "Mr. Ransom: Objected to as not redirect.

"The Master: Sustained.

"Mr. Cummings: Exception.

"Q. Do you know from your experience, study and knowledge of the situation exactly
507 how water gas is made?

"Mr. Ransom: Objected to.

"The Master: Objection sustained.

"Mr. Cummings: Exception.

"Q. Can you make it yourself if you have the machinery, the oil and the apparatus?

508 "Mr. Ransom: Objected to as not redirect examination.

"The Master: Objection sustained.

"Mr. Tobin: Exception.

"Q. Could you step into a gas plant that was properly equipped and take charge and operate the gas machines to make water gas?
509

"Mr. Ransom: Same objection.

"The Master: Same ruling.

"Mr. Tobin: Exception.

"Q. Are you familiar with all the apparatus used in making water gas?

510 "Mr. Ransom: Same objection.

"The Master: Same ruling.

"Mr. Tobin: Exception.

"Q. You have made a study, have you, of the latest designs for making water gas—kept abreast of the times, have you, and of the machines for making water gas?

"Mr. Ransom: Same objection. 511

"The Master: Same ruling.

"Mr. Tobin: Exception" (p. 1372).

(5) *When Mr. Willard F. Hine was again on the stand on direct examination, the following occurred:*

512

"By the Master:

"Q. Did you make an appraisal of the buildings?

"A. I made an appraisal of the cost of these buildings.

"Q. Of the cost? What do you mean by an appraisal of the cost of the buildings; 513
what kind of an appraisal is that?

"A. That is an appraisal of the cost.

"Q. You mean the cost to reproduce?

"A. No, sir.

"Q. Of the original cost?

"A. Of the original cost.

"Q. You mean your estimate of what it 514
cost them originally to build?

"A. No, I set up figures. I can explain probably better by telling just what I did.

"Mr. Chambers: I think if we can go on, we will show what it is.

"The Master: We are going on right now, 515
my way.

"The Witness: The cost as shown by the books of the company.

"The Master: Then I do not want your appraisal of that — next question. How else did you determine the cost?

516 "Mr. Chambers: I object. I think you ought to let me develop this like you did Mr. Miller.

"The Master: I am going to develop all that I want." (pp. 1850, 1178).

517 (6) *The Master refused to admit in evidence the reports of the predecessor company, Newtown and Flushing Gas Company, for the years 1901, 1902 and 1903, notwithstanding the fact that the contents of those reports would disclose some evidence as to the extent and cost of property acquired by the present company when it was merged into and with the Newtown and Flushing Company* (p. 1129).

518 (7) *The Master excluded the evidence of respondent's witness Raynor as to the contents of reports made by the respondent to the State Board of Tax Commissioners, more particularly as to mains and services laid in the year* 1919 (pp. 791-794).

519 (8) *The Master erred in the admission of the books of account of the respondent company (complainant's Exhibits 52, 53, 54, 55 and 56), it having been shown that the books were incorrectly kept and that the underlying data on which the books were based was incorrect and that there existed errors in the underlying data which had found their way in the books.*

520 (9) *The Master likewise erred in the admission of complainant's Exhibit 77, in that the facts therein were susceptible of actual proof from the operations of the company, the introduction of this exhibit based entirely on hypothetics was erroneous, incompetent and greatly prejudiced*

the appellants. The said exhibit should not have 521
been received in evidence because the facts them-
selves were easily ascertainable and susceptible
of proof by witnesses now or heretofore con-
nected with the company. The Master thereby
dispensing with the degree of proof required by
the decisions in rate cases for the proving of one
of the vital and essential elements in a rate 522
making case.

The master who tried this case is the same master about whom we contend in the case of *Newton* v. *Consolidated Gas Co.*, No. 257 present Calendar, that he did not accord the appellants a fair trial. We claim here, as we did in that case, the master, by cutting off examination and 523
unfairly characterizing the testimony of witnesses, did not give appellants a fair trial.

POINT IX.

THE RATE OF RETURN WHICH A PUBLIC UTILITY IS ENTITLED TO ENJOY, AS DETERMINED BY THE COURTS IN NORMAL PRE-WAR 524
TIMES, IS NOT DECISIVE OR CONTROLLING IN THE ABNORMAL WAR PERIOD.

We have discussed the question of the rate of return which a public utility is entitled to enjoy fully in our brief submitted to this court in the case of the *Newton et al.* v. *Consolidated Gas Company*, (No. 257 on the present calendar). We will 525
not repeat our argument in full again. There we argued that so long as the respondent enjoyed a 6% return over a reasonable period of time, the statute should not be condemned, even though such return fell off in some years, so long as the average was maintained throughout.

526 We cited the *General Business Law* of the State of New York (Sec. 370); which provides for a rate of return of 6%. The decision of this court in the case of *Willcox* v. *Consolidated Gas Co.*, 212 U. S. 19, held that a rate of return of substantially 5½% was ample in normal years.

We submit that either one of the following
527 propositions is sound:

(a) The utility is entitled to enjoy a return of no more than 6% average over a reasonable period, even though in some of the years the return might be less than that; or

(b) If a shorter period is taken, then the return, because of the present abnormal conditions,
528 might be lower than the rate allowed in normal times, and the statute would not be condemned because of a falling off in the return.

There is authority to sustain our proposition that during the war time period (and the year of 1919 considered by the court below was within such period) a rate below 6% is ample.

529 In the case of *Kings County Lighting Co.* v. *Lewis*, 110 Misc. p. 204, the court found

> "That during a war time period in the city of New York 4¾ per cent. was a fair return upon the value of the property, including the land of plaintiff used in the public service."

530 We submit that a rate which yields in these temporarily abnormal, unusual and unprecedented times to respondent a rate of as much as 3% will not require a declaration on the part of the court that the statute is thereby unconstitutional.

We have argued fully in the case of *Newton et al.* v. *Consolidated Gas Company of New York*, (No. 257 on present calendar), the question that the burden of proof in these cases is on the respondent and that the party assailing the statute must establish "beyond any just or fair doubt" that the act of the Legislature is confiscatory.

Willcox v. *Consolidated Gas Co.*, 212 U. S. 19.
Sinking Fund Cases, 99 U. S. 700, p. 718.
Des Moines Gas Co. v. *Des Moines*, 238 U. S. 153, p. 163.

We shall not repeat the argument here.

POINT X.

FOR THE REASONS ASSIGNED IN THE FOREGOING POINTS THE DECREE APPEALED FROM SHOULD BE REVERSED AND THE BILL OF COMPLAINT DISMISSED, WITH COSTS.

SUBJECT INDEX.

PAGE

Statement 1

Suit to declare void Chapter 125, Laws of 1906 1

Respondent claims rate fixed by act of 1906 has been and is inadequate; that earnings have never been sufficient to provide 6% return; no dividends to stockholders, but devoted income to expansion of business; has 10,000 customers; in 1918 used 327,585,600 cubic feet of gas; alleges no adequate remedy at law; complaint verified April 7, 1919..... 2

Evidence taken of operating cost year 1919, first five months year 1920; no evidence that statute had been confiscatory since company organized; objected to proof to the contrary; appellants submitted data October, 1906-1920; Master's report July 16, 1920; Court's opinion November 3, 1920; findings based on the year 1919.... 3

Constitutionality of act upheld by this Court; list of defendants; instructions to Master; exceptions filed to Master's report; judgment of court below November, 1920 4

In event of reversal of judgment; statements of moneys collected to be filed..... 5

Bond to be filed with the clerk of court; provisions of decree to be observed only in case appeal taken promptly; appeal taken within thirty days; exceptions to Master's report filed..... 6

History of respondent; acquired property by purchase of stocks 1904; successor to Newtown and Flushing Gas Company which in turn succeeded others; one plant of predecessor located in Flushing since 1859 7

PAGE

Respondent acquired stock offered by Henry R. Wilson; consideration stated; provision to be inserted in the bonds; respondent became possessed of real and personal property and only of franchise right; extent of the business developed in 1904 not on the record 8

Summary of lack of proof; method used by respondent in attempting to prove operating expenses; contentions of appellants.. 9

Statement showing Master's mind was made up; no justification for admission in evidence of books; no audit made of books; underlying audit not proved; extent of property used in the service not proven; witness called; not competent..... 10

No other witness called to prove property; witness Miller attempted to prove distribution system, but Master condemned his plan; no witnesses called to prove receipt of production materials; no competent evidence as to labor costs; no proof of depreciation requirement; instructions as to amount to be set aside received from board of directors..... 11

Quantity of gas distributed not proved; evidence of engineer Woods rejected; Master intended to have manufacturing engineer state facts; no such witness called; no proof of amount of gas sold; no meter-readers called; no ledger clerks called; no proof that salaries or wages are reasonable; record deficient in proof that manufacturing plant well designed, properly operated or of right type..... 12

I. No Proof of Reasonable Manufacturing Cost 13

Allegation as to cost does not prove reasonableness of cost; citation from Illinois case; no proof that operations are effi-

PAGE

cient; evidence regarding manner in which coal is received..... 13

Method of unloading coal; an important item of expense; method of transferring coal from mine to plant; cost $1.25 per ton; no railroad siding..... 14

Witness admitted could be reduced to fifty cents per ton; some increase required in investment; every ton unloaded costs seventy-five cents more than reasonable if railroad siding put in; further reduction if plant properly located; plant location possibly correct at some remote period; conditions now condemn location of plant; consumer made to pay excessive costs... 15

Book cost may be higher than shown by opinion testimony of witness; opinion testimony concerning quantity of coal needed; saving by proper methods of unloading; 9,500 tons per annum; proof of this contention 16

Witness attempts to explain valuation..... 17

Plant is not on navigable water; witness admits it is badly located, but claims that it is there; in arriving at his price did not consider all the men employed..... 18

Witness took figure from records of company; cost of $1.25 was only fifty cents some years ago; present condition shown to be abnormal..... 19

Contention of appellants regarding cost of handling coal; management condemned; past profits so high respondent did not worry about excessive costs; no proof that coal paid for is actually received..... 20

Possibilities of coal being diverted from respondent's use; instances cited..... 21

Other instances of probable loss of coal..... 22

System of accounting for coal used condemns plan of reporting operations; testimony of Works Superintendent; testimony relating to system of measuring coal; testimony inconsistent..... 23

No gas makers called as witnesses to prove entries on works report sheet..... 21
Impracticable for superintendent to do what should be done in keeping track of coal used 25
No check on coal used in the manufacture of gas other than monthly inventories; inventories cannot be checked; records not preserved; failure of Spear to bolster up weak testimony of Morrison..... 26
Testimony of Spear; unsatisfactory witness 27
Respondent attempts to prove operations reasonable by offering opinion testimony; witness trained in plants of much larger size than that of respondent; testimony of engineer is an estimate based upon hypothetical plant; no examination of records by him except as to cost of handling coal from wharf to works..... 28
Wood's testimony not convincing..... 29
Contentions concerning testimony of Woods 30
Argument concerning Woods' estimate of operating costs 31
Witness Woods allows for men not continually employed by respondent..... 32
Woods' evidence clashes with his testimony in another case quoted; comparison of testimony in two cases..... 33
Further instances of inefficient plant operation 34
Morrison's testimony so confused no sense can be made of it; testimony supporting this contention 36
No testimony showing computation covering coal used checked against amount of coal paid for; Master ignores errors admittedly made in the book records..... 37
Opinion testimony of Woods contradicted by concrete evidence of general manager. 39
Woods inflated costs by assuming poor quality coal **41**

PAGE

Woods' opinion testimony not supported by evidence of his associate, who purchases coal 44

Woods' testimony also contradicted by general manager Spear..... 45

Superintendent would know if coal was of poor quality but, he was not asked for his opinion 46

Saving to respondent if proper quantity of coal used in production of gas..... 46

A cent per thousand here and there will decide this case against respondent; loss reported by Master wiped out if respondent saves three cents or somewhat less in handling coal or saves any amount of coal used; Master uses book costs and relies on Woods' hypothetical figures to substantiate them; Woods demonstrated book costs unreasonable; boiler coal too high; this saving alone wipes out deficit..... 47

Woods' evidence difficult to follow; he assumes coal handled, although liquid is used requiring no hauling; principal cost of gas is in the expense for oil; Woods' estimate higher than book cost..... 48

Evidence showing purchases of gas oil are made; contracts made by vice-president of Consolidated Gas Company; no evidence that this plan is fair to respondent; contentions of appellants..... 55

Even if changes made in quality of gas and kind of oil used, Standard Oil Company will continue to get all the contracts.... 59

Master not impressed with ability of other companies to make more favorable contracts 62

No proof as to quantity of oil used in making gas; errors disclosed in Morrison's monthly reports upon which books are based 66

Serious doubt cast upon records of the respondent; Teele's tabulations based upon

PAGE

books which are made up from Morrison's incorrect records; contention concerning correct amount of oil; saving to respondent 83 cents on each M cubic feet of gas sold 67

After oil, next important item, in cost of gas is labor at works; no proof of amount of labor used 68

Master thought better proof was possible in instant case than in Consolidated Gas case 69

No witnesses called to prove original records of labor cost; Teele's work on accounts described 72

Superintendent of plant called; testimony covers 8 pages—2 pages devoted to qualifications; testimony concerning labor expense very indirect 74

Cross-examination of superintendent reveals his lack of knowledge of accounts to which cost should be allocated..... 75

Superintendent's assertion that he pays only men employed and that he needs the men is not proof that books accurately reflect the reasonable expense of producing gas 76

Master accepted Woods' estimate as evidence that book records of production are reasonable 78

Woods' figures on labor shown to be unreasonable 88

Abnormal period; testimony of general manager contradicts that of expert witness.. 89

Contention concerning fair labor cost; saving in labor cost, $5,000..... 90

Woods, for respondent, could not vouch for reasonableness of repair cost reported on books; he estimated a lower requirement; Woods' estimate, however, is just twice what he testified to as the reasonable amount in Consolidated gas case as shown by record 91

PAGE

Contention concerning need for close scrutiny of repair cost; comparative figures for previous years; 1919 expense obviously unreasonable; even adding 50% to average of ten years, cost should not exceed 3.5 cents per thousand as compared with Master's finding of 7.35 cents; saving 3.85 cents is equivalent to $14,600 per annum 92

Cost of gas lost or gas not accounted for; Master's finding clearly erroneous; he placed no reliance on Woods' testimony.. 95

Comparison with previous years' operations; if average used allowance should be 8%; reference to opinion of Judge Hand in Consolidated Gas case; he found 4.1% sufficient, although the Master recommended a greater allowance; Judge Mayer in instant case also disagreed with the Master but did not make sufficient reduction; year 1919 is abnormal; opinion testimony should not be relied upon; allowance should be based upon past operation during normal years 96

Cost to distribute gas; court below disallowed certain items; other deductions should be made; in addition to reduction from 42.07 cents per thousand to 37.15 cents, there should be deducted for uncollectible bills 0.4 cents per thousand; interest on consumers' deposits should be disallowed, amounting to 0.18 cents per thousand 97

Table summarizing adjustments to operating cost 98

II. The Company has had fair average return and a return more than sufficient to overcome claim of confiscation:

Citation from Municipal Gas Company case. 99

Case in line with decisions handed down by the highest court 100

PAGE
Points to be considered in a case involving confiscation; cases cited..... 101
Contention of appellants in respect to average return 102
Complete account must be taken of present earnings, future prospects and particularly of past earnings and returns realized under the statutory rate; evidence clearly shows excessive returns earned by respondent; earlier excesses should be considered as accumulation to equalize profits over a period of years; intent of the legislation. 103
Evidence offered by appellants to show past earnings; Master refused to consider relevancy of these facts; based his opinion upon operations of a single year; Master's findings clearly inconsistent with the intent of the legislation; if Master's unsound opinion should be sustained a gross injustice would be placed upon gas consumers; policy of the legislature when it fixed rates in 1906 105
Respondent entitled to fair average return on its investment and on no more; should have conserved excessive earnings to provide for lean years..... 106
The purpose of the acts fixing statutory rates and providing for Public Service Commission; present rate should be continued until all previous excessive earnings have been consumed; or even longer unless without any doubt the further requirements of service and the equitable treatment of investors would necessitate an annulment of the rate..... 107
Table showing return on rate base for 13½ years 108
Excess earnings of $341,297.26 should be treated as contribution by consumers, credit balance to cover temporary annual deficiencies in earnings during abnormal periods 109

PAGE

The period selected by respondent in this bill of complaint should be considered in ascertaining if fair return has been had on the investment; Master did not take this into consideration; claims of respondent in its bill of complaint; respondent offered not one scrap of evidence in support of this claim; respondent practically directed by Master to confine its testimony to 1919; the showing in the record supports our contention that judgment of lower court should be reversed 112

III. The period selected by the Master is altogether abnormal 113

One year's operations no true criterion of the reasonableness of legislation, particularly where year is abnormal; abnormality disclosed by the record 113

Record cited to support this contention 124

Cases cited showing abnormal period is not relied upon by commissions or courts when fixing fair rates; conditions are getting back to normal; cases cited 130

IV. No proof of the fair present value or investment in property 131

The question to be determined; what the courts consider 131

Master disregards depreciation of property in use or installed prior to 1904 133

Proof of cost to reproduce property new as of January, 1920, not entitled to any consideration in view of proof based upon operations for the year 1919 135

Company not entitled to a return on investment which is appreciated to the extent of permitting unjust rates to the public... 137

Tendency of courts to modify reproduction method so as to bring it nearer to actual cost 138

PAGE

Decisions opposed to reproduction cost method for rate-making purposes..... 140

Criticism of Miller's use of prices as of January, 1920, made applicable to period preceding and presumed to apply to period to follow; further criticism of reproduction cost-new method with reference to overhead charges represented in the case of developing the company's business and carried in operating expenses which were contributed by consumers..... 142

Reproduction cost-new method assumes theoretical elements which do not and cannot exist in reality..... 143

Condemnation of reproduction cost-new method by Honorable Charles E. Hughes 145

Testimony of respondent's witness to the effect that there is no depreciation..... 150

Criticism of Master's acceptance of claim of respondent as to finding for franchise and rights, overhead expenses and other intangibles as to which the record is lacking in proof 154

V. Master's failure to take into account depreciation 157

Judicial authority for deducting depreciation 159

Criticism of Master's views on obsolescence and inadequacy 160

Failure to set aside depreciation reserve of no consequence 162

Judicial authority for same..... 163

Analysis of Master's criticism of necessity for depreciation reserve..... 166

Application of no depreciation theory to Ford automobile 167

O'Conner's admission as to depreciation of buildings 169

PAGE

VI. Appellants have not had a fair trial 169

Critical review of Master's findings reserved to Court 170

Master hasty and time very valuable; an advance knowledge of Master on questions to be put by counsel..... 171

Master's characterization of statutory law; Master's impetuous and injudicious use of language 172

Master's virulent criticism of counsel's questions 173

Master's assumption of his own knowledge of the gas business 174

Master's humiliating criticism of counsel and characterization of counsel's position as nonsense 175

Further citation showing Master's injudicious use of language..... 175

Master forces immediate cross-examination of witness, assuming his own ability under the circumstances to take up the cross-examination at once with ease..... 176

Master states weakness of testimony about to be given, taking advocate's part..... 177

Master's undue restriction of cross-examination by counsel..... 180

Master's indifference as to the proper qualification of witnesses 181

VII. Respondent's books of account, not proof of their contents 182

Master's finding of accuracy of contents of books 183

Books admitted over objection..... 183

Master's call for better proof..... 184

Spear's testimony described only system of entries relating to cost of materials in operating ledger 185

Master suggests better and more proof.... 185

PAGE

Teele's testimony covered only percentage check 186
Raynor's test of accuracy of books covered only monthly trial balance 186
Foy's testimony only as to entries in his handwriting 187
Foy never checked back any underlying data. Took what was given him as correct 187
Books not of original entry, and argument against their admission as proof 188

VIII. Statute presumed to be constitutional. Burden of proof of respondent beyond reasonable doubt 189

Supreme Court of the United States,

(OCTOBER TERM, 1921)

CHARLES D. NEWTON, as Attorney General of the State of New York, and ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York for the First District, Appellants, *vs.* NEW YORK & QUEENS GAS COMPANY, Respondent.	No. 296. Appeal from the District Court of the United States for the Southern District of New York.

Brief on Behalf of Appellant Dana Wallace, as District Attorney of the County of Queens.

Statement.

This is a suit in equity, instituted by the above-named respondent against the appellants herein, to have declared unconstitutional and void, as to respondent, Chapter 125 of the Laws of 1906, upon the ground that the rate of one dollar ($1.00) per thousand cubic feet required by said statute, at which gas shall be supplied to private consumers in the territory served by respondent, is in contravention of Section 10 of Article I of the Constitution of the United States and of the Fourteenth Amendment to the said Constitution.

In its bill of complaint, respondent claims (XVI) that "the maximum price of one dollar ($1.00) per thousand cubic feet for gas, fixed by the said Act of 1906, has been, is, and will continue to be wholly inadequate, in that it does not permit your orator to earn a reasonable return upon the fair value of its property devoted to the public use." Furthermore, it specifically claims (XIV) that during no year since its organization, in 1904, have the earnings been sufficient to provide a return of as much as six per cent, upon the reasonable value of its property; although in paragraph IX. thereof, it alleges that "since its organization in 1904, it has managed the business prudently but has paid no dividends to its stockholders, has devoted to the development and expansion of the businesss certain income which might have been used for dividends." In a general way, it also claims that the reasonable value of its property, one million, four hundred ninety-two thousand, nine hundred seventy-six dollars ($1,492,976) should have added thereto for going value an aggregate deficiency in earnings below seven and one-half per cent. upon the value of the said property, in the sum of at least $300,858.41 (X).

Respondent asserts (XVIII) that it has more than ten thousand customers to whom it is daily selling gas, the amount distributed and sold during the year ended December 31, 1918, being 327,585,600 cubic feet.

Respondent alleges (XIX) that it has no adequate remedy at law for the injury which would result from the further enforcement of the said Act, and that such injury would be irreparable.

The bill of complaint was verified April 7, 1919; and after several adjournments, from July 15, 1919,

to April 15, 1920, the taking of testimony was begun before the Special Master, April 26, 1920, and continued to June 28, 1920, being spread upon 2373 printed pages.

The Master took evidence of operating cost for the year 1919 and the first five months of the year 1920. There was also submitted, testimony as to the cost of oil, coal and other materials from 1906 down to June, 1920.

No evidence was offered by respondent in support of its claim that the statute had been confiscatory as to it since the date of organization, but, to the contrary, it objected to such proof (R. 1018, et seq.), while appellants submitted data showing the operating results, the unit quantities of materials used, the unit costs thereof, and other information as to the revenues and expenses of respondent during the years from 1906 to 1920 (R. 47 [79]).

The report of the Master was submitted to the Hon. Julius M. Mayer, District Judge, July 16, 1920, and the opinion of the Court below is dated November 3, 1920.

The Master concluded to base his findings as to the cost of making and distributing gas especially upon the operations and alleged cost for the year 1919, in the belief that the cost in the year 1920 will be in excess of the figures he reaches for the year 1919 (R. 48, [79½]). The learned Judge approves of the finding and states:

> "The year 1919 is in this case a sufficient basis for the calculation of the cost of production and the rate base for a future long enough to call for some judicial action."
> (R. 110 [193]).

The constitutionality of Chapter 125 of the Laws of 1906 was upheld by this Court in a suit instituted by the Consolidated Gas Company of New York to have such statute declared confiscatory. The decree of the Circuit Court restraining the public officials from enforcing the provisions of the Act was reversed without prejudice to the bringing of a new suit "when practical experience of the effect of the Act by actual operation might prevent the plaintiff's obtaining a fair return * * *."

Willcox *v.* Consolidated Gas Co. of N. Y., 212 U. S., 19.

In the suit commenced in the Court below the appellants herein, the Attorney-General of the State of New York, the District Attorney of the County of Queens, and the Public Service Commission of the State of New York for the First District, who are charged with the prosecution of violations of the statute, were made defendants. The Special Master was appointed by order of Mayer, J., dated the 23d day of May, 1919, to take all of the testimony and evidence with respect to the issues, make all needed computations, fully find the facts and report to the Court below all the testimony and evidence received by him, together with the findings of fact and his recommendations as to the facts and the law. Exceptions to the Master's reports and opinion were filed both by appellants and respondent, and, thereafter, on the 3d day of November, 1920, an opinion was filed by the Hon. Julius M. Mayer, District Judge, this being amended in certain particulars on November 16, 1920. Judgment was entered by the Court below November 19, 1920 (R. 117 [208]), wherein and

whereby it is provided that appellants, their successors, etc., be restrained from attempting to enforce Chapter 125 of the Laws of 1906, or from doing any act or thing interfering with the right or authority of respondent forthwith to charge, bill, collect and receive for gas any rate which it might lawfully charge or receive if the provisions of the said act relative to the rate were not operative.

The judgment further provides, in the event that an appeal from the decree is taken by defendants, the plaintiff shall keep true and correct accounts and records of all gas sold by it and of all moneys received by it for gas sold by it, so as accurately and completely to show the moneys received by it for gas sold by it from and after the date of the decree, in excess of the sums which would have been received for such gas if the same had been sold at the rate of one dollar ($1.00) per thousand cubic feet of gas sold, together with the names and addresses of the consumers from whom such moneys are so collected, in so far as such names or addresses are known to the respondent or appear upon its books and records; "and such accounts and records shall, upon application to this Court, be at all reasonable times open to the inspection and audit of the defendants" (VI) (R. 119 [209]). The judgment further provides that if, within the time prescribed, an appeal from the decree is taken by defendant, the plaintiff shall, on the 15th day of December, 1920, and on the 15th day of each month thereafter, file in the office of the Clerk of the Court below a sworn statement showing the moneys received by it during the preceding month, for gas sold by it, in excess of the sums which would have been received for such gas if the same

had been sold at the rate of One Dollar ($1.00) per thousand cubic feet.

It is further provided that a bond shall be filed with the Clerk of the Court, conditioned for the repayment to the consumers, in the event that the decree is reversed on appeal and it is ultimately decided that respondent is not entitled to judgment, of the respective sums of money collected in excess of the One Dollar ($1.00) rate, together with interest at the rate of six (6) per cent., the obligation of such surety upon and under such bond to be in the sum of Two Hundred Thousand Dollars ($200,000), and when the excess moneys so collected shall aggregate said amount the appellants may make application to the Court for an additional bond or security.

It is provided in the judgment that plaintiff shall be required to observe these provisions of the decree only in case an appeal is taken by the defendants, or any of them, within thirty (30) days from the entry of the decree, and that the defendants shall perfect and prosecute any such appeal and print and file the record and all necessary papers to that end, promptly and without delay, and shall, with all convenient speed thereafter, serve a notice of application to this Court to advance the said appeal upon the calendar. Defendants' appeal was taken within thirty (30) days after the entry of the decree herein and said appeal has been perfected (R.124).

Exceptions to the Special Master's Report were taken by the defendants and were filed in the office of the Clerk of the Court below on the 6th day of August, 1920 (R. 60-102). Complainant also filed exceptions to the Master's Report and Opin-

ion, in the office of the Clerk, on the 9th day of August, 1920 (R. pp. 104-106).

History of Respondent.

Respondent is a corporation, duly incorporated (Complainant's Ex. 1) on or about July 7th, 1904 (R. 1721), for the purpose of manufacturing and supplying gas for lighting the streets and public and private buildings of cities, villages and towns in the State of New York and particularly within the Borough of Queens, City of Greater New York. The amount of capital stock was at that time fixed at Six Hundred Thousand Dollars ($600,000) of the par value of One Hundred Dollars ($100) each.

On or about July 18th, 1904, respondent acquired, by the purchase of stocks and bonds, and now operates, a gas production property with a system of distribution mains located in and serving the former village of Flushing in the third ward of the Borough of Queens in the City of New York.

Respondent is the immediate successor to the Newtown and Flushing Gas Company which in turn was the successor to a number of companies that had supplied gas in various parts of the Borough of Queens. (R. 155-162 [15-25].) The manufacturing plant of one of said predecessor companies has been located at the same point in the village or town of Flushing since about the year 1859. (R. 163 [26].)

On the 12th day of July, 1904, and theretofore, the Newtown and Flushing Gas Company owned and used certain lands, buildings and other real and personal property for, and was actually engaged in, the manufacture, sale and distribution of gas in the Borough of Queens, City of New York;

and in addition it owned franchises and rights to be a corporation and to lay mains in certain specified districts for the purpose of supplying gas to the inhabitants thereof. It had at that time developed the gas business in the Third Ward of the Borough of Queens, and had secured customers sufficient in number to constitute a going concern with a business attached.

Respondent acquired all the capital stock and all of the outstanding bonds of said Newtown and Flushing Gas Company, as the result of a proposition by Henry R. Wilson who offered to sell and deliver the entire outstanding stock (to wit: $300,000 common and $50,057 14/100 preferred) with the entire outstanding bonds (to wit: $300,000) for $1,250,000, payable in $600,000 par value capital stock of the purchaser and $650,000 par value of its corporate five per cent. bonds. The said H. R. Wilson in the aforesaid proposition also made the following provision: "that said bonds should be secured by your first mortgage, and shall be of an issue of not exceeding $1,000,000 secured by such mortgage; all other details of said bond and mortgage to be as approved by you." (R. 1722 [2711].)

On or about July 18, 1904, Respondent merged into itself the said Newtown & Flushing Gas Company. By virtue of the merger and of the statute pursuant to which it took place, respondent became possessed of and became the owner in fee simple of all of the real and personal property owned by the Newtown and Flushing Gas Company, the owner of the franchises and rights then owned or enjoyed, and the owner of the business established and developed. The extent of the business at that time developed does not appear in the record.

SUMMARY OF LACK OF PROOF.

The method employed by respondent in attempting to prove its operating expenses consisted in having a witness for respondent submit to the appellants in advance of the hearings a series of summaries consisting of tables that are condensations of the figures and statements or other data contained in the general account books of the respondent.

It was assumed by the Master and the Court below that respondent's expert accountant having stated that the books have been kept according to the prescribed rules of the uniform system of accounts of the Public Service Commission, each and every one of the entries therein are accurate, and the expenditures all legitimately made. This method of proof throws the burden wholly upon the appellants, on the theory that they or their experts had an opportunity to scrutinize and should have examined the tabulations of respondent's accountant and made such objections to or criticisms of the partial transcripts of the books as they deemed necessary.

The method of proof in effect, therefore, is something of this sort: The gas company, prepares a series of tables based upon the books, offers them in evidence and says to the appellants, "Now, find out what's wrong, if anything, with all of this, and point out in what respect anything is incorrect." The Master (R. 1255) indicated this was his attitude during the trial, and was consistent in his belief as is shown by his opinion (R. 50 [83]).

We respectfully submit that this method of proof entirely throws the burden upon those opposing the attack upon the statute and does not require those complaining of the unconstitutionality of the

statute to shoulder the burden that is justly theirs.

That the Master had his mind made up that all of the data submitted on the part of the company without detail proof was *prima facie* evidence of its claim appears from his statement upon the motion to dismiss.

> The Master—* * * The complainant has proven the cost of making gas, on the evidence as it stands, that it costs them more to make gas than they sell it for or are compelled to sell it for. (R. 962 [1479].)

There is no justification for the admission in evidence of respondent's books. An expert accountant, in no way connected with any branch of respondent's business and having no personal knowledge of any of the transactions recorded in said books, testified to the effect that the entries are copied from underlying data and are arithmetically correct. That witness did not even make an audit of the books of account.

Evidence of mathematical accuracy is no proof of the truth of the data in said books. The underlying data back of the books was not proved by any witness, and the tabulations of the witness Teele, which are limited transcripts of the books, were lacking in proof to the extent that the books themselves were not proved (R. 230).

Respondent failed to prove the extent of the property used and useful in the public service. It called an assistant engineer in the employ of the parent Consolidated Gas Company, Herbert W. Alrich (R. 166 [32]), who presented a diagram of respondent's property purported to be owned and used as of January 1, 1920 (R. 168 [34]). We contend that Alrich is not competent to testify concerning the use and usefulness of the property because he does not know how much gas is sold per

annum and therefore cannot know if the gas production property described very generally by him is actually used and needed in serving the gas consumers (R. 173 [44]).

No other witness was called to prove that all of the plant included in the rate base or in the books of account is used and useful in giving gas service.

Alten S. Miller, an expert employed by respondent, testified to the method used by him in ascertaining the extent of the distribution system, but his plan for securing this data was condemned by the Master (R. 235 [181]). No witness was called to prove that the gas mains in the streets are suitable for the purpose and of no greater extent or capacity than is called for by the needs of the present or prospective consumers of gas.

Respondent called no witness who actually receives the coal, oil and other expensive materials so largely used in the manufacture of gas. Its superintendent, Martin Morrison, merely described, in a general way, the system used in accounting for the receipt and use of materials and in recording the time of the men employed in the plant operations. No witness was produced who could swear to the accuracy of the shop labor costs or as to the allocation of the expense as between capital, operating or depreciation reserve accounts.

No proper proof was submitted as to the need for setting aside certain sums annually to take care of depreciation, the evidence being merely to the effect that the bookkeeper entered in the books a charge in the amount that he was instructed to set aside by the officers of the respondent, who, in turn, received their instructions through the action of the Board of Directors (R. 264 [197]).

The amount of gas sent out to the system of

mains was not properly proved. The witness Woods, consulting engineer to respondent and engineer of manufacture to the Consolidated Gas Company, attempted to show that he knew the amount, but the Master rejected this evidence and said he would have the manufacturing engineer produced to give the facts (R. 273 [212]). No such engineer was subsequently called, and the superintendent of the works when on the witness stand was not interrogated as to the amount of gas sent out.

Respondent failed to prove the amount of gas sold. Not one of its meter readers was called to testify as to the system used in indexing the meters and recording the amount of the consumption by individual gas consumers. Not one of the consumers' ledger clerks was called to testify to the accuracy of the system used in recording the gas used and in computing the amounts of the bills.

Respondent offered no proof that the salaries paid to its officers and the wages paid to its employees are fair and reasonable.

The record is deficient in proof that the manufacturing plant is reasonably well designed, properly operated, or of the right type to produce gas economically.

POINTS

I.

Respondent failed to prove that its cost to manufacture gas is reasonable.

The *allegation* by respondent that certain sums have been expended in the production and distribution of gas is not sufficient to establish that the statutary rate for gas service is confiscatory. The burden is upon respondent to *prove* that its management of the property has been reasonable.

"The property of the public utility is devoted to the public use. There is always the obligation springing from the nature of the business in which it is engaged,—which private exigency may not be permitted to ignore,—that there shall not be an exorbitant charge for the service rendered * * *. No direct parallel can be drawn between a private corporation and a public service corporation, for the reason that to a greater or lesser extent the public has acquired an interest in the use of the property devoted to public use, and correlatively the company owes a duty to the public as well as to its stockholders and must charge no more than a reasonable rate for service rendered (citing *Havre de Grace and Perrysville Bridge Co.* v. *Towers* (*Md.*) 103 *Atl.* 319)," [P. U. C. *ex rel.* City of Springfield *v.* Springfield Gas & Electric Co., 291 Ill. 209.]

Respondent has not proved that its operations are carried on efficiently.

As to the manner in which coal is received at the plant:

"Q. How is coal received at this plant of the New York & Queens Gas Company? Is it received directly from a railroad connection up to this time, or is it brought by trucks or wagons?

"A. It is brought by barge and unloaded at the dock, on Flushing Creek, and then carted from there in automobile trucks to the plant and stacked in the yard, in the coal bins.

"Q. How far is the point of unloading of the barges?

"A. About half a mile. At the present time they have got to cart it over that, on account of the construction of a big sewer which blocks the way. They have got to go a round-a-bout way to get to it."

(R. 181 [57].)

The Court will take note of the fact that coal is one of the important items of expense in the production of water gas. Respondent's plant is located inland. The coal that it receives comes to tidewater in railroad trucks which are dumped into barges each containing about 600 tons. These barges are then transferred by tug to a dock on Flushing Creek, and the coal is there unloaded on to automobile trucks or wagons for transportation to the yard or coal bins at respondent's plant. While the trial was in progress the automobile or wagon haul was considerably over half a mile in length.

George E. Woods, engineer of manufacture of the Consolidated Gas Company of New York and consulting engineer to respondent in its plant operations, testified to the manner of handling coal at the dock and into storage, and he computed the cost per ton for such labor, handling and cartage at $1.25. He was asked if this unreasonable expense could be reduced if coal was handled to the plant by means of a railroad siding:

> "Q. Assuming that a new railroad siding and appurtenant coal-handling facilities are installed at this plant, as has been indicated, would this expense of labor, handling, carting, and so forth be increased or decreased?
>
> "Mr. Neumann—I object as incompetent, irrelevant and immaterial.
>
> "The Master—Overruled.
>
> "Mr. Neumann—Exception.
>
> "A. It would be reduced.
>
> "Q. About how much; have you figured it?
>
> "A. It would be reduced to about 50 cents a ton, I should say.
>
> "Q. But that would involve an increase in the investment in land and apparatus?

"Mr. Neumann—One moment.

"A. It would."

(R. 411 [418].)

The evidence is conclusive that every ton of coal put into this gas plant, or into Woods' hypothetical plant, costs 75 cents more than it would, if the plant was even moderately well equipped to handle raw material used in the production of gas. We draw particular attention to the fact that Woods was merely asked by counsel for respondent if the cost of handling coal would be reduced if the plant was provided with a railroad siding. No doubt this Court will want to know why the plant is not provided with railroad facilities; but we also believe it will require to know why this gas plant is not located on the waterfront, from which it is distant one-half mile. What right has respondent to retain, as a site for its production plant, the land that was selected by one of its predecessors over sixty years ago? Possibly, at that remote period it did not much matter if the plant was on a site having no frontage on tidewater and no connection with the railroad.

Things are and for many years have been vastly different. Why should the consumer pay $1.25 to unload and haul every ton of coal delivered to this plant, when the fair cost of unloading coal from barge direct to coal pits would not exceed 10 cents per ton?

There is no proof on the record that the cost of handling coal by the present method is not even higher than $1.25 per ton, because the evidence introduced on behalf of respondent is confined, in this respect, to the testimony of engineer Woods, who, so far as the records show, has had no ex-

perience whatever in handling coal in this way. He certainly does not do it in such an antique way at the plants directly under his control.

During the year 1919, respondent sold 336,241,400 cubic feet of gas (R. 39 [65]). Woods assumes that for each thousand cubic feet of gas *made* there is required 34 pounds of generator coal, and 22 pounds of boiler fuel, which means, allowing for gas lost, that about 9,500 gross tons of coal are unloaded per annum. A saving of only $1.00 per ton would therefore be equal to $9,500 in the year 1919.

Evidence of the excessive cost to handle coal at this plant, as compared with the cost at other plants under Woods' control, is found by reference to his further testimony as follows:

> "Q. In the Consolidated Gas case you testified that labor handling would be .0075 per thousand cubic feet.
>
> "A. Right.
>
> "Q. And here you have it a dollar and a quarter?
>
> "The Master:
>
> "What was it in the Consolidated?
>
> "Mr. Chambers—.0075.
>
> "Mr. Ransom—That is a dollar and a quarter a ton.
>
> "The Witness—A dollar and a quarter a ton.
>
> "The Master—What is it carried out at?
>
> "Mr. Chambers—That would be 3.13 cents.
>
> "The Witness—Yes, as against three-quarters of a cent in the other case.
>
> "Q. How do you explain that wide variance?
>
> "A. Because in the case of the Consolidated Plant referred to, they were all on tide water where the coal was taken out.

"Q. But you didn't base this on any Consolidated plant?

"A. No, I said the Consolidated plants referred to were all on tide water where it was drawn right from the boat and put in the pile.

"Q. You testified in the Consolidated case that you didn't base that on any particular plant?

"A. No, I based it on a ten million plant; I said it ought to be on the water front—a plant of that size should be on the water front for economical operation.

"Q. And this is not, you say?

"A. No, this is not.

"Q. Well, how do you go to work to handle this coal?

"A. It has to be taken from the barge and put in automobile trucks and carted to the plant.

"Q. A distance of how far?

"A. Oh, I should say a half a mile.

"Q. That is the way it is handled here?

"A. That is the way it is handled.

"The Master—Isn't this Flushing plant on the water front?

"The Witness—No.

"The Master—A half a mile inland?

"The Witness—Well, I should say, probably—it isn't half a mile, from the water, but probably half a mile, I don't know the exact distance, from where they would bring it.

"Mr. Ransom—No place where there are any piers or bulkheads?

"The Witness—No.

"Mr. Neumann—Why not let the witness testify?

"Q. Isn't it on any navigable water?

"A. The amount of money involved, however, in the transportation would not justify the abandonment of the plant for the purpose of putting it on the water; the amount ex-

pended for the purpose of putting it on the waterfront would not justify in changing from the present location of the plant.

"Q. Well, it is a badly located plant, is it?

"A. It may have been badly located but it is there.

"Q. What did you figure on labor, how much?

"A. A dollar twenty-five a ton.

"Q. How many men?

"A. That was the contract price they got; I didn't take into consideration the number of men.

"Q. Isn't it on a railroad, this Flushing plant?

"A. There is a railroad, but there is no railroad siding to the plant.

"Q. But one could be built?

"A. Yes, and probably will be.

"Mr. Ransom—It is not on the railroad, the testimony in the case shows.

"The Witness—I say it is not on the railroad but by the purchase of some land a siding could be put in.

"Q. How far is it from the railroad?

"A. Five or six hundred feet, I should say, —is that right, Mr. Spear?

"Mr. Spear—About 200 feet.

"Q. Then if you had a little siding 200 feet, you would be rid of that transportation or some of it?

"A. With the expense involved in doing that, putting it in?

"Q. Supposing the railroad would put the siding in?

"Mr. Ransom—Objected to. The company has indicated that they were going to do that when it could acquire the land. We have not yet proved the situation in that respect; the company could not do it until it acquired the land.

"Mr. Neumann—You just stuck your head in the door, didn't you?

"The Witness—They didn't go any further with it.

"The Master—Objection overruled.

"Q. Then you took that figure of coal-handling from the records of the company?

"A. That is right.

"Q. And that is not your idea about it?

"A. Well, it is my idea because I knew that they were paying for doing that work. I think, under the conditions, it could not be done for any less.

"How much was that a year ago, say, or two years ago, that cost?

"A. I don't know. I can recall some three or four or five years ago, I think it was fifty cents.

"Q. In place of what, a dollar and a quarter?

"A. That is just an illustration, Mr. Chambers, of how things have gone up all along the line.

"Q. Well, things are abnormal. That proves it, doesn't it?

"A. Well, it is a question of what may be considered abnormal. It looks now as if we had normal conditions, unless it goes higher."

(R. 431-433 [482-485].)

It is no answer to our criticism concerning the location of this plant for Engineer Woods to say that it is there and that respondent must make the best of a bad bargain. To our mind, this continuance of excessive cost for handling coal for over fifty years, condemns the management. The record shows there is a railroad within 200 feet of the plant, and a railroad siding should certainly have been put in some years ago to bring down the cost of handling coal from $1.75 per ton to not over 50

cents per ton. Does not this lack of intelligent effort indicate that in the past this company has been able to earn ample returns under the very worst kind of management. It may well be presumed that the executives did not feel there was any need worry about profits. They were content with what they got and made no effort to get more by cutting down expenses.

In addition to the fact of this unnecessary expense in handling coal, it will be noted by the Court that respondent has submitted no proof that it actually receives all of the coal for which it pays:

"By the Master:

"Q. About how many barges of coal do you have in a year?

"A. Of broken coal, about an average, pretty nearly, of a cargo a month, five or six hundred tons; and on boiler coal probably one every two months.

"Q. When it comes on the barge alongside of Flushing Creek is it weighed there at all or is it weighed when it gets to the plant?

"A. No, it is not weighed; we take the bill of lading weight.

"Q. You always take the bill of lading weight?

"A. We have to pay on the bill of lading weight.

"Q. Do you not in any way check up your quantities?

"A. Well, we check up the quantities by periodical inventory, periodical measuring of the coal pile.

"Q. You do not check up the quantity in the barge for which you are charged?

"A. No.

"Q. Who receives the coal from the barge?

"A. The superintendent of the works.

"Q. Personally?

"A. Yes.

"Q. So he can tell us just how many barges of coal he got during the year—he would know?

"A. Oh, yes."

(R. 182 [58].)

The Court will no doubt bear in mind, after reading the testimony in this case, that there are many possibilities of coal being diverted from respondent's use. For instance, the coal is loaded at the mines on the railroad cars, and a bill of lading is issued showing the weight of coal so loaded. That is what respondent pays for. The coal on the railroad cars, however, is dumped into barges at tidewater. There is no evidence and no assurance that all of the coal is dumped out of the said railroad trucks, and this is really an important point to take into consideration in winter weather when it is obvious that moist coal may stick in the pockets of the car, due to frost.

In addition to this probable source of loss to the respondent, there is the further likelihood that coal may be stolen from railroad trucks *en route*, particularly in the yards where quantities of coal are stored before sufficient trucks are available to make a barge load of 600 tons.

We next may consider the probability that, in unloading from railroad trucks into barges some spillage occurs. Furthermore, these barges are transferred to the public dock by steam tugs. It is surely quite likely that if fuel for raising steam was short, or of poor quality, the tug engineer might borrow some of the high grade anthracite generator coal or bituminous boiler coal while he is transporting it across the bay to Flushing Creek.

The possibilities of loss are not yet exhausted.

The coal on the barges is unloaded into automobile trucks or horse drawn wagons and delivered along public highways. It being evident that it is very difficult to clean out the pockets in a barge and, the work being done by contract, one can well imagine the great temptation there is for the contractor to get out the bulk of the coal which is easily handled and refuse to bother with the coal in the corners of the barge pockets.

Still another possibility occurs for loss of coal. It would be only human on the part of the hauling contractor to load his trucks to the limit because idle time of the truck, or the required travel of over a half mile distance with only a part load, would mean additional expense per ton-mile. A full truck passing over uneven dock structures and roads causes much spillage. This is particularly true where there is a detour, as in this case. Any intelligent layman must have observed, in passing coal docks or railroad freight yards, that some people make a regular business of gathering up the spillage of coal.

We point to the fact that respondent relies upon pure assumption as to the amount of coal received. It has not proved that it receives all of the coal it pays for. *What it does pay for is the coal loaded on the railroad trucks, hundreds of miles from the plant. Furthermore, the trip by water from the lighterage limits of New York Harbor to Flushing Creek dock, which serves the plant of respondent, takes about five hours* (R. 182).

The system used by respondent in accounting for the coal that it professes to use for generator fuel in the production of gas, condemns the plan of reporting its operations.

Mr. Morrison, as Superintendent of the Flushing Works, in direct personal charge of the operation of the works and the manufacture of gas, devotes

his entire time to that business. (R. 571 [801].)

We have shown that respondent pays for the coal on the basis of railroad company's bill of lading weights.

The following questions were put to the witness Morrison:

"The Master—Do you weigh the coal when it comes in?

"The Witness—No.

"Q. That is, you make a check of the coal pile monthly by measurement?

"A. I do.

"Q. So that if there were any considerable discrepancies between the amount of coal billed and the amount of coal received, your invetory would show it?

"Mr. Neumann—Objected to on the ground it is incompetent, irrelevant and immaterial. That is a conclusion for the Master to draw from the witness' testimony, not for the witness to testify to.

"The Master—Overruled.

"Mr. Neumann—Exception.

"Mr. Tobin—Exception.

"A. Yes.

"By the Master:

"Q. You said something about keeping track of the coal used, did you not?

"A. Yes.

"Q. How do you do that?

"A. We keep an account of the number of buggies as they are dumped into the machine, and *the gasmaker puts it on his sheet*, and we add those buggies up each day and compute the weight of coal from those buggies.

"Q. How much does a buggy contain?

"A. From eleven to thirteen hundred pounds.

"Q. Do your buggies vary in size?

23

"A. No, they are all the same size.

"Q. Do you weigh each buggy?

"A. No.

"Q. How do you say from eleven to thirteen hundred pounds?

"A. We have weighed them to check up on the weights.

"Q. How do you figure them, 11 or 13?

"A. We use 13.

"Q. You use 13 as the quantity that goes into the manufacture?

"A. Yes.

"Q. Why do you do that when some of it runs as low as 11?

"A. Using it in that way and checking up with our inventory at the end of the month, our coal pile comes out nearer to what we have used, using 1,300 pounds to the buggy.

"Mr. Neumann—I move to strike that out, as to how much he used, as a pure guess, based on his conception.

"The Master—Overruled.

"Mr. Neumann—Exception.

"Mr. Tobin—Exception.

"By Mr. Ransom—Do you personally watch the filling of the buggies?

"A. Yes." (R. 572-3 [804]).

It is to be noted that none of the three gasmakers was called to prove the entries on the daily work's report sheet.

In connection with the above testimony, we will endeavor to show that it is impossible for the witness to do what he claims he does in the matter of measuring the coal pile periodically, watching the buggies that go to the generator charging floor and keeping track of the coal used, even though he claims he is on the job twenty-four hours in the day (R. 571 [801]). The witness testified that it takes about thirty buggies daily to handle coal

from the pile to the generator floor (R. 577 [812]). He also testified:

"Q. Did I also understand you to have said that you personally watch the filling of those buggies?

"A. At times, yes.

"Q. Is that part of your task, or your job at this plant, to watch these buggies as they are filled?

"A. It is part of my work, yes.

"Q. How much time would it take to fill a buggy?

"A. One man about fifteen minutes.

"Q. And you would be right there present when they were being filled?

"A. Not the entire time, I might not, but I see the buggies as they go on the elevator and on the generator floor?

"Q. All the buggies?

"A. No, not all.

"Q. Well, how many of them?

"A. Well, I might observe a dozen a day.

"Q. So you do not really know whether they contain 1300 pounds of coal, or 1200 pounds of coal or 1000 pounds of coal?

"A. I would know that by the amount of coal that is on the buggy from previous weights that I have taken.

"Q. It would simply be mere guesswork, would it not?

"A. It would—a pretty good guess, though.

"Mr. Tobin—I ask that the last part of the answer be stricken out.

"The Master—Motion denied.

"Mr. Tobin—Exception."

(R. 594 [840].)

Just before this point in the record, the witness testified that there is no check on the coal used until it goes into the manufacture of gas, other

than the monthly periodical measurement of the coal piles, which he makes personally. *In passing, it may be noted that he takes the measurement of the stock pile and makes a memorandum, but there is no way of checking these memoranda, because they are not preserved.*

We direct the Court's attention to the testimony of the witness Morrison that there is a shortage of men and the company cannot get all the men that it needs. (R. 600 [849].) This must mean that Morrison is kept extremely busy and it is therefore fair to conclude that he cannot possibly check up these buggies to see that they are properly filled, particularly as the shortage of men has been so great that he, Morrison, according to the testimony of General Manager Spear, has been forced at times to go on the operating floor and make gas himself.

The witness, Spear, tried to bolster up the weak testimony of Morrison by stating that he also looked at the buggies containing the coal as they go from the coal pile to the generator floor. (R. 637 [911].)

Mr. Spear only spends a short time at the plant on some not particularly specified mornings throughout the year, so it is quite evident he cannot have any personal knowledge that all the buggies containing coal are properly filled. His testimony regarding the checking up of the coal is as follows:

> "Q. Taking up the coal, how do you follow that through, how do you take care of that as far as protecting the company in getting the full quantity of coal that is billed to you is concerned?
>
> "A. Only by the measurement of the piles which is taken periodically.
>
> "Q. There is no account taken of it as it is

unloaded from the barges to the wagons or carts which draw it from the barges to your coal piles?

"A. No.

"Q. You take no account at all until it reaches the coal pile?

"A. That is right.

"Q. And then you follow it through in the measuring of the coal as it goes into the manufacture of gas, that is, you take another measurement then?

"A. We measure it periodically, usually about the first part of the month.

"Q. I mean these buggies?

"A. I don't pay any attention to the buggies except occasionally as I go to the generator house and look to see if they are filled to about a certain point, to see how they are running.

"Q. Your account then, of quantity is taken in these periodical measurements as against the amounts that are received for bills rendered? A. Yes.

(R. 637 [911].)

Incidentally, we may say, the testimony of the witness Spear as to the average amount of coal contained in the buggies, or in fact on any matter of quantities relating to materials used, is very unsatisfactory, because he does not even know what is meant by a weighted average, as is shown by the following testimony:

"Q. (Interrupting) Do you know what a weighted average is?

"A. A weighted average?

"Q. Yes.

"A. No.

"Q. You take merchandise that you have purchased over a number of years, in order to get a weighted average, you must know how much you purchased in each year, that is correct isn't it?

"A. Yes.

"Q. Do you recall now what a weighted average is?

"A. Well, I have never used it.

"Q. You did not use it in this exhibit?

"A. Oh, no, we took the high and low price that we paid for these materials in those respective years.

"Q. And that is true of every item, is it?

"A. Yes.

"Q. And you have arrived at these figures of percentage here not according to what is called weighted average, but a straight average?

"A. A straight average, yes.

"Q. Irrespective of the quantity?

"A. Yes.

(R. 707 [1031].)

How does respondent attempt to prove that its operations are reasonable? It offers opinion testimony by an engineer in its employ who, in the bulk of his operations has to do with plants of enormous size, both coal gas and water gas, totally unlike that used by respondent both in design and capacity. Woods' chief concern is with a coal gas and water gas plant that has a capacity of not less than 80 million cubic feet per day.

The testimony of Woods shows that he based his estimate of fair operating cost upon a hypothetical plant. He did not even go to the trouble of examining the record of operations which respondent keeps (R. 178 [562]) although he did admit, (R. 432 [184]) that he took the cost of handling coal from the records of the company. It is further shown by the following that Woods did not base his estimate of cost for producing gas on any records of the company.

"Q. Did you base that on any records of the company?

"A. I know the number of men required to operate a plant of that kind? For instance you have a gasmaker who makes a million feet a day, in three shifts they would make a million feet for each of three machines, and in a larger plant, where they had larger machines, in a plant capable of handling larger machines that same gasmaker would make three million, so for the gasmaker himself it would be three times as much as in the large plant where they have these large individual units. You could not afford to put up individual units of that kind in a plant like Flushing, you would have to rebuild the plant entirely in order to handle the proposition.

(R. 112 [500].)

In reference to Woods' claim that it costs a certain amount, per thousand cubic feet, in making a million cubic feet of gas per day, it will be noted from his testimony that he figures a fixed number of men at certain rates of pay, and then divides the result in dollars by one thousand M cubic feet of gas made. The testimony shows that the plant he figured on would make much more than one million feet a day.

"Q. This company out there does not make a million cubic feet a day?

"A. They do.

"Q. They make a good deal more than that?

"A. They will make slightly more than that; they average that.

"Q. Didn't you hear testimony the other day that it was 1,600,000?

"A. That is a maximum capacity. They probably gave you a send-out of 1,600,000? I do not recall the exact figures, but I think their annual send-out was around 375 to 380 million cubic feet make, which would be close to an average make of one million a day. A mil-

lion a day would be 365 million. Their average make was probably 1,050,000 a day.

"Q. They make sometimes 1,600,000?

"A. Yes.

"Q. Wouldn't that cut the cost down?

"A. Yes, and if they made less than a million it would probably bring it up.

"Q. Do they make less than a million that you know of?

"A. There are times when it must be less than a million to get an average throughout the year of slightly more than a million.

"Q. Then they could close down one of the machines and relieve some of these gas-makers and others.

"A. I took it as a condition of operating a million a day. At times their cost may be a little more, and at times a little bit less than that."

(R. 446 [507].)

The claim we make is that, while the average make per day for 365 days in the year may be slightly over a million cubic feet, this does not indicate that the plant sometimes runs a little higher, and sometimes a little lower, from day to day. The evidence is to the effect that this plant has a seasonal load, so that when the make from day to day runs, *for consecutive months*, over 1,500,000 per day, the cost per M should be a good deal less than on a plant which is running on an average close to a million cubic feet per day throughout the year. The evidence shows this plant has three sets of generating apparatus. When the production gets down below one million cubic feet a day, it is not necessary to keep Woods' whole gang of men on. Respondent would operate only one machine, and, therefore, the amount of money into which the quantity of gas would be divided would be very much less than it would be

if respondent had to operate two machines all the year round, making an average of a million cubic feet per day.

The strange feature of Wood's testimony is that he sets up a hypothetical plant, with an imaginary force of men to operate it, notwithstanding the fact that he frequently visits the plant in the capacity of consulting engineer, and could keep an accurate record of the number of men actually employed. His testimony regarding the number of men who *might* operate the plant is as follows:

> "Q. That is, have they a superintendent, one clerk, three gasmakers, three engineers, two boiler firemen, two generator firemen and coal passers, and two laborers?
>
> "A. I would say so, yes.
>
> "Q. Are you sure about that?
>
> "A. I am quite sure that they have that many men.
>
> "Q. You don't know what they pay them over there, do you?
>
> "A. I do.
>
> "Q. Those prices?
>
> "A. Those are the average rates. The gasmakers and engineers are not all paid the same rate. The average rate for those different classes is there.
>
> "Q. The superintendent, do you know what he gets over there? A. I do.
>
> "Q. Those prices?
>
> "A. Those are the average rates. The gasmakers and engineers are not all paid the same rate. The average rate for those different classes is there.
>
> "Q. The superintendent, do you know what he gets over there?
>
> "A. I do.
>
> "Q. What does he get?
>
> "A. $2,100 a year, I believe.
>
> "Q. And his maintenance, his house there?
>
> "A. His house.

"Q. Does he pay rent for that?

"A. No, he doesn't pay any rent that I know of.

"Q. Now, the clerk?

"A. The clerk I have there at $4 a day. Just what they are paying the clerk I don't know. I don't believe they are paying quite that, because they have a new clerk they just put on, and he probably is not getting $4. $4 is what they will have to pay as soon as he is broken in.

"Q. What are the gas makers getting over there?

"A. The average rate is indicated on that exhibit.

"Q. Then they have got three over there?

"A. Yes.

"Q. And three engineers?

"A. Right.

"Q. At these prices?

"A. Right.

"Q. That is, some of them are getting less, I take it, and some more?

"A. Yes, for all three that would be the rate."

(R. 117 8 [509].)

Looking at the above testimony, it will be seen that Woods allowed for a clerk to be employed all the time, whereas the testimony of Mr. Morrison is that very frequently he does not have any clerk.

(R. 574 [806].)

While this point is fresh in the Court's mind, about there being no clerk, and also bearing in mind that Mr. Morrison occasionally has to make gas himself as an operator of a machine, it would seem all the more unreasonable to believe that he knows the buggies of coal going to the generator floor are properly loaded to carry 1,300 pounds of coal each.

Mr. Wood's testimony regarding the cost of oper-

ating a hypothetical plant was shown to be very much different from his testimony in the Consolidated Gas Company case, to which frequent reference was made in the present record. One cannot get his viewpoint that in the Consolidated case he testified to the estimated cost of a hypothetical plant of 10 million cubic feet capacity, which operates almost to capacity every day. It surely must be evident that in a plant making 10 million cubic feet on an average, the spread between the daily minimum make and the maximum daily make must be at least as great as in another hypothetical plant where the average daily make is one million cubic feet. How then can his claim be given any weight that the marked difference in his hypothetical cost in the 10-million plant is explained by a greater amount of idle time in the smaller plant. Woods claims that the cost is much higher in a million foot plant than in a 10-million plant, but that it would be no lower in a 20-million foot plant.

"Q. Well, what did you testify to in that regard?

"A. I testified that in a plant such as I testified to in October, 1919, as bearing upon the Consolidated Gas Company's system, which did not include the Flushing Company in any sense, that a fair operating condition was 2½ cents per thousand cubic feet for gas-making labor.

"Q. If you had a plant of 20 million cubic feet capacity, could you operate it for less than these figures that you have in October, 1919?

"A. I could not.

"Q. There would be no decrease?

"A. No.

"Q. How about the other way, the converse?

"A. If you can operate a plant continuously anywhere from five to ten million—if you recall, Mr. Chambers, in my testimony, I testi-

fied to a plant on an average condition operating on ten million feet a day, and that plant would run anywhere from 7½ to 15 or 18 million. I took a fair operating condition throughout the year. At times the gas-making labor would be somewhat less than 2½ cents, and at other times it would be somewhat more than 2½ cents, but I believe under the conditions under which we were operating, a fair amount was 2½ cents per thousand cubic feet."

(R. 1156 [506].)

In the instant case he testified that the cost ought to be 6.71 cents per thousand cubic feet (R. 1597).

In further reference to the inefficiency displayed in the management of this company, attention is drawn to the testimony relating to the handling of coal from the stock pile at the plant to the water gas generators. We have already noted, from the testimony of Superintendent Morrison, that he had great difficulty in getting men to operate the plant, and it is apparent that respondent has a plant which requires more men than would be needed in a well-designed gas works. This is shown by the following testimony:

"Q. In a general way, will you describe these buggies?

"A. A large steel buggy on two wheels that has a funnel at the end. As they tip this buggy, it is dumped into the generator.

"Q. It runs on tracks?

"A. We run them, not on tracks but on channel irons, from the bin to the elevator.

"Q. What is the motive power?

"A. Man.

"Q. How many?

"A. Two. Two from the coal bin to the elevator, one after they get on the floor or where it is level pulling."

(R. 578 [813].)

The testimony of Morrison in reference to the way in which he keeps track of the coal used is so confused that we doubt if anyone can make sense of it. Beginning at page 572 of the Record, it will be noted that Morrison testified that each buggy can contain from 1,100 to 1,300 pounds. They do not weigh each buggy load. He uses 1,300 pounds rather than 1,100 when he puts the amount down on the works reports' sheets. He was asked why he put down 1,300 pounds when some of the buggies ran as low as 1,100 pounds, and his answer was:

> "Using it in that way and checking up with our inventory at the end of the month, our coal pile comes out nearer to what we have used using 1,300 pounds to the buggy."
>
> (R. 573 [801].)

It was evident that the Master was quite confused by Mr. Morrison's testimony regarding the keeping of records of coal used, as is shown by the following:

> "By the Master:
>
> "Q. Let me ask you this, Mr. Morrison. You say that you take these buggy quantities at 1,300 pounds, then you check it up with your inventory at the end of the month. What quantity of coal used do you report at the end of the month, the amount shown as the result of your inventories or the amount of the computation of the buggies?
>
> "A. The computation of the buggies.
>
> "Q. Suppose that is less than the amount shown by your inventory check, do you still stick to your buggies?
>
> "A. No, we change the weight of the buggies to meet that.

"Q. Suppose it is more than indicated for your inventory check?

"A. Then we would increase the weight of the buggies.

"Q. Then you take the result of your inventory check rather than your 1,300 pounds per buggy, don't you, as the total used in the course of a month?

"A. In that way, yes.

"Q. What?

"A. In that way, yes.

"Q. What?

"A. In that way, yes.

"Q. In what way, don't you? What I am trying to get at is this, Mr. Morrison. You use a certain quantity of coal in the course of a month, do you not?

"A. Yes.

"Q. How do you determine that?

"A. By the number of buggies and by the weight per buggy.

"Q. Suppose the number of buggies in the course of a month indicates that you have used 500 tons?

"A. Yes.

"Q. When you check it back with your inventory you found you only used 100 tons?

"A. Well, that never happens; we are very much closer than that.

"Q. What?

"A. We are within ten tons of our inventory.

"Q. Always?

"A. Most always.

"Q. Then you would stand by your buggies' weights?

"A. We would stand by our buggy weights.

"Q. And you disregard the variance of the ten tons?

"A. Yes, take the standard weight of the buggy against the tape measurement of the coal pile.

"Q. Then you rely on your buggy weights of 1,300 pounds?

"A. Yes."

(R. 575-6 [809].)

We confess that we are still confused as to what respondent actually does in regard to the amount of coal used, notwithstanding we have made a very close perusal of the entire record in respect to the amount of coal reported used. Furthermore, we cannot point to any place in this record where respondent showed that the computations made of the amount of coal used are in any way checked against the amount of coal paid on bill of lading weights.

In his report the Master makes no reference to errors that admittedly took place in reporting the amount of coal used, although the record shows that during the trial he was amazed at some of the errors which crept in. This is shown by the following testimony:

> "The Master—Yes, I am going to sustain the objection in a minute. I just want to let Mr. Neumann develop his theory here. Is that in error?
>
> "The Witness—That is an error.
>
> "The Master—An error of how much?
>
> "The Witness—200,000 pounds.
>
> "The Master—How could that error get by to such an extent? Let's understand something about it? How does a big error like that creep in?
>
> "The Witness—Due to the labor conditions and other troubles up at the plant. I did not check these underlying figures here but checked the summaries and took the clerk's figures here.
>
> "The Master—Well, 200,000 pounds makes a good deal of difference in the cost.

"The Witness—It does, yes, but we catch that on the measurement of the coal pile.

"The Master—Well, how could it? It shows up there, does it? Does the error show on there?

"The Witness—No, the error does not show here, but the error is gradually taken up, so that it is taken care of as we go on.

"Mr. Ransom—What month was that?

"Mr. Neumann—I move to strike out that last answer as a mere conclusion.

"The Master—Yes, I will grant that motion.

"Mr. Ransom—Exception."

(R. 588-9 [830].)

In comparison with the testimony of Woods regarding the number of men to be used in his hypothetical plant, there is the evidence of General Manager Spear. Woods testified that three gas makers would be needed, whereas Spear showed this was not the fact:

"Q. And how many gas makers?

"A. Three.

"Q. Is that the average, three, or is that the extreme number employed?

"A. Three would be the extreme number, except that we have an extra man broken in in case of sickness of one of the gas makers that could take his place, but we only use the three where we are running three shifts.

"Q. Taking the twelve months, for many months, would you employ three gas makers during the year 1919?

"A. I can't tell that without looking over the records.

"Q. Would you employ two gas makers for most of the year?

"A. That is pretty hard to say. I say possibly two and a half for the year 1919, it might average that.

"Q. It would average about two and a half?

"A. It might; I can't tell except from the records.

"Q. That would be your judgment?

"A. I would not want to say positively on that without a study of it."

(R. 641 [918].)

In Woods' computations concerning cost of producing gas at a hypothetical plant, he inflated the figures by assuming the generator coal was of bad quality. Instead of testifying that 32.5 pounds would make a thousand cubic feet, he insisted that 34 pounds was required.

We draw the attention of the Court to some testimony which shows the unreliability of the opinion evidence of Engineer Woods:

"Q. Has the coal during recent years oftentimes been of inferior grade?

"Mr. Neumann—Objected to on the ground it is incompetent, irrelevant and immaterial, and not the proper way of proving it.

"The Master—Objection overruled.

"Mr. Neumann—Exception.

"Mr. Chambers—The witness has not any knowledge on the subject.

"The Master—I am going to find out.

"By the Master:

"Q. Have you kept in touch with the quality of coal delivered at Flushing?

"A. Yes, I have, your Honor.

"Q. To what extent?

"A. Why, we have an analysis of their cargoes and a knowledge of the results from the operations of their various cargoes.

"Q. You are watching that all the time, are you?

"A. All the while. I get reports from Flushing the same as I do from the other companies.

"Mr. Ransom—And some parts of their coal at least are taken to Flushing from the Astoria?

"Mr. Neumann—That is objected to on the ground it is incompetent, irrelevant and immaterial, and not the proper way of proving it, not by what this witness——

"Q. Do you know?

"A. Yes.

"Q. Have you seen it?

"A. We have shipped them coal.

"Q. Have you seen that done?

"A. I have.

"Mr. Neumann—Exception."

(R. 1212-13 [451].)

Woods also testified to the quality of coal on his cross-examination, as follows:

"A. No, I would not necessarily. It might be possible, Mr. Chambers, that they could get three or four cargoes of coal, and it would be an unfortunate thing, but if they were all bad that generator fuel would run 37 or 38 pounds, and you could not help yourself.

"Q. That would only be an isolated incident, would it not?

"A. It would be an incident. It is an incident we have at times, where they will get a cargo of coal and immediately the results go off, that they cannot control them or rectify them; they cannot get back to a good operating condition.

"Q. You took that into consideration when you testified in the Consolidated case?

"A. I did, and, as I stated here, while we have those conditions and we have a bad fuel condition, that with the coal that we receive and the coal that we have on hand, the quantities that we are able to use, we are able to use some of our good coal with our bad coal and

try to obviate those conditions, which cannot apply in a case like this."

(R. 151 [520].)

Woods' opinion testimony was not supported by the evidence of another employee of the Consolidated Gas Company, Walter R. Addicks, Vice-President, who purchases coal for respondent:

"Q. You stated this morning that where it was found by Mr. Spear that the coal was not up to the requirements, that is, was not of the quality good for making gas, that he reported to you. Can you tell the Master what procedure you followed, that is, what you did about that when Mr. Spear reported to you that the coal was not proper gas-making coal, was not sufficient in the qualities necessary for making gas—what did you do then?

"A. I would ordinarily take it up with the coal companies, they would send an inspector down——

"Q. Tell us exactly what you did do?

"A. I would have an analysis of every cargo of coal that is used——

"Q. Who makes that analysis?

"A. The chemists. If we found that the coal was not well prepared we would take it up with the coal company and ask them to inspect it. They might say our sample was not good, and might take other samples, and we would object and they would say the coal was not made by them, they gave us the best they could, etc. Anthracite coal has been running fairly well. Bituminous we had some trouble with.

"Q. What rebate has been allowed to the Consolidated Gas Company because of the failure of the coal company to furnish the quality of coal which was called for in the contract?

"A. I don't remember any rebate.

"Q. That is, you cannot recall any moneys

being paid back to the Consolidated Gas Company?

"A. Not one cent.

"Q. For poor coal, at least coal that was not sufficient in quality?

"A. No.

"Q. Well, taking the New York & Queens Gas Company, can you tell us of any rebates that were paid back to the Consolidated Gas Company for the benefit of the New York & Queens Gas Company because of the failure of the coal companies to deliver coal of a proper quality?

"A. I cannot. I don't remember any complaints from Mr. Spear about the quality of the coal. I did not take up any question of the quality of his coal.

"Q. You indicated that Mr. Spear at different times had complained?

"A. No. I said that would be the procedure if the coal had not been up to the standard, but I don't remember any complaint.

"Q. Then I misunderstood you. I understood you to say he had complained?

"A. No. I don't remember that he ever did.

"Q. So your testimony is that you don't remember Mr. Spear complaining at any time?

"A. As to anthracite I do not.

"Q. How long a period of time would you say that would cover?

"A. Five or six or seven years.

"Q. And no rebates have been paid back for poor coal?

"A. Absolutely not.

"Q. Have any adjustments or allowances been made at all for the benefit of the New York & Queens Gas Company covering the period of 1919, 1918?

"A. None.

"Q. None whatever?

"A. No.

"Q. So that the price fixed in the contract

is the price that the New York & Queens was called upon to pay?

"A. It is.

"Q. And there has been no change whatsoever as to those terms?

"A. Absolutely none.

"Mr. Tobin—I don't like to prolong this testimony, but Mr. Gawtry indicated that there was the possibility of protesting, and of protests being made because of poor quality. If it was of no avail then there would be no purpose of making the protest.

"Q. Has the Consolidated Gas Company on behalf of any of its companies, or on behalf of its own company, gained anything by those protests?

"A. Merely demanding and asking for better preparation of the coal. We have frequently done that in my experience.

"The Master—Does that avail you very much?

"The Witness—Not very much, excepting asking for better quality.

"The Master—Do they do any better?

"The Witness—I think they do. We test every single cargo of coal that comes to us. Most people put it in their boilers and let it go. We tear apart those ingredients on every ton of coal, and we are very particular. I think because the coal companies know we are particular we get better coal and better service.

"The Master—But you don't get any rebates?

"The Witness—No. Coal is not made to order. Coal comes from the ground ready made.

"Q. Has it not at any time been so poor in quality that you deemed it advisable to turn to some other coal company to purchase coal?

"A. Not with anthracite. I have with bituminous, but not with anthracite

"Q. You only buy anthracite coal?

"A. That is practically all the Queens Company uses. I have bought large quantities of bituminous coal for the Consolidated Company.

"Q. So there was no complaint sufficient at any time to make it necessary for you to turn to some other companies to buy anthracite coal?

"A. No."

(R. 551, 552, 553 [686, 687, 688].)

We will next refer to the testimony of Maynard H. Spear, General Manager of respondent. He was asked concerning the quality of the coal and testified as follows:

"Q. Now, as to the quality of coal, do you make any complaint if the quality of coal does not meet the necessary requirement, or what your gas maker says it should be?

"A. Yes.

"Q. How often would it happen in the course of a year that the quality of coal would be deficient?

"A. Oh, it is very rare.

"Q. Very rare?

"A. Yes. Coal will vary, but we very seldom make a complaint on the quality of coal.

"Q. Did you find in the year 1919 that the quality of coal was more or less deficient, and that you had to make up that deficiency by something else to make up the manufacture of gas?

"A. It had more dust in it than usual.

"Q. It had more dust than usual?

"A. Yes.

"The Master—Screenings?

"The Witness—Screenings."

(R. 638 [912].)

So far as Mr. Spear's testimony is concerned, the Master showed by his questions that the presence of more dust or screenings in the coal would not account for the use of more of this coal, as generator fuel, than is usually required. These screenings do not go into the generator but are in fact taken out for use as boiler fuel.

Spear also testified regarding coal, as follows:

"Q. Do you follow closely the quality of the coal supplied to the company?

"A. Yes, I do.

"Q. From whom do you receive reports on which to base your complaints if any are made, whom do you receive reports from, the gas maker?

"A. No, from Mr. Morrison, or from looking over results, or from looking over the coal myself. From my experience in the gas business I can tell ——

"Q. You can tell whether it is proper quality or not?

"A. Yes.

"Q. Now, what would you say as to the quality of coal in 1918 as compared with the quality of coal in 1919, confining yourself entirely to the coal received by your company?

"A. Well, I cannot recall the comparison now between 1918 and 1919.

"Q. Can you say as between 1919 and the period of time that we have gone in 1920?

"A. No, I do not want to draw a comparison on that from memory now.

"Q. Would you say it was better in 1920 than it was in 1919?

"A. That would be pretty hard for me to say from memory; I would not want to do it.

"Q. Would you say it was about the same in 1920 as it was in 1919?

"A. I would not want to make a statement on that.

"Q. That is, you do not care to make a statement?

"A. Well, I cannot recall it from memory."

(R. 639 [911].)

As compared with Mr. Woods, of the Consolidated Gas Company, who testified that more coal is needed because the quality is poor, it is interesting to note that respondent called Martin Morrison (R. 569 [798]), the superintendent of the plant, who testified that when a cargo of coal arrives he generally goes down to look it over:

"A. (Continued.) I am present when the coal is hauled into the plant. We pay for the coal on the railroad's bill of lading. When the coal has been delivered I notify Mr. Spear of its receipt by signing my name on the back of the invoice."

(R. 571 [802].)

Mr. Morrison, who knew, if anybody did, what quality of coal he received and used at this plant, was not asked a single question by counsel for respondent regarding the quality of the coal received.

The saving of 1.5 pounds of coal per 1,000 cubic feet of gas made is equivalent, on Woods' basis, to about .63 cents per M cubic feet of gas sold. Add this to the $9,500 saved on handling the coal, equal to about 2.8 cents, and we have available for return to the investors, from this source alone, nearly 3½ cents per thousand cubic feet of gas sold.

A cent per thousand here and there will make a great difference in this case. Take for instance the Master's finding (No. 48, R. 44) where it is noted that he believes respondent failed to make the revenue meet the expenses, in 1919, by $9,074.70. Here we have, by challenging just the one item of

generator fuel, thus reducing the expense about 2½ cents per M cubic feet, more than wiped out the deficit. If we take the book figures for generator fuel, our correction of the reported cost would be still greater, because the respondent alleges it used 34.59 pounds per M feet, as against the 34 that Woods used and the 32.5 pounds that we claim should be the maximum allowance.

It is worthy of note that the Master sets up the book costs in arriving at his conclusions, and he seems to rely upon Woods' hypothetical figures to substantiate them. Woods, however, demonstrated that several items of cost are unreasonable, and we cite as one instance the reported expense for boiler fuel. Teele's exhibit (Complainant's No. 64, R. 1569) shows an expense of $.0882 for this fuel whereas Woods said $.0639 is ample. The difference in favor of appellants on account of reducing this excess cost is equal to almost $.028 per M cubic feet of gas *sold*, figuring the unaccounted-for gas at 12 per cent. The Master erred in not finding that the evidence of respondent's witness Woods conclusively shows the boiler fuel is excessive to the extent of at least 2¾ cents per M cubic feet of gas sold. On a spread of 336,241.4 M cubic feet of gas sold, this saving alone would have given respondent an additional net revenue of $9,246.64.

There is another feature about Woods' evidence that we find difficult to follow. He assumes a cost of $1.25 per ton to handle coal. He then sets forth Boiler Coal as an item of expense and assumes a certain number of tons hauled into the plant. As a matter of fact, respondent uses its own water gas tar for boiler fuel and, of course, that is pumped to the boilers and does not come by rail-

road cars, barge, automobile trucks or horse wagons. It is a byproduct of the gas and requires only a little steam to pump it to the boiler furnaces.

The Court will note from "Complainant's Exhibit 77" (R. 2-31), this being the estimate of cost to produce one million cubic feet of gas per day in a hypothetical plant, and from "Complainant's Exhibit 64" (R. 1569), which is Teele's tabulation of the reported cost of production for the year ended December 31, 1919, that the principal cost of producing gas is the expense for oil used to enrich the gas.

Woods claims that 4.2 gallons of oil are required to enrich each thousand feet of gas and that the purported cost per M feet, under the price conditions assumed by him, is 30.59 cents.

In Teele's Exhibit the amount of oil reported used for the year ended December 31, 1919, is 4.19 gallons per thousand cubic feet of gas made and at the price purported paid for oil the expense for enriching each thousand cubic feet of gas made is 28.2 cents.

The testimony regarding the price paid for oil was offered by Mr. Addicks, Vice-President of the Consolidated Gas Company (R. 317 [284]). He is a member of the Executive Committee of said Consolidated Gas Company and familiarizes himself with all questions of new construction and expenditures, and is primarily responsible for contracts covering gas oil and coal. For a number of years he has had charge of the purchase of oil and coal for the Consolidated Gas Company. The company has made a practice of purchasing its gas oil on contracts extending over periods of time at a stipulated price. Addicks personally negotiates

agreements for the purchase of oil and submits the results of his negotiations for the approval of the Executive Committee of the Consolidated Gas Company. His purchase of oil for the Consolidated embraces also the oil requirements of certain Gas Companies affiliated with the Consolidated Gas Company, including the respondent.

Addicks negotiated the contract for gas oil required by the Consolidated and its affiliated companies, including the respondent, during the year 1919. The contract was placed with the Standard Oil Company of New Jersey.

Before the contract was signed Addicks asked for prices on oil from other refiners. He took into account whether or not the people that he asked to quote prices were in a position to supply the needs of the Consolidated Gas Company in the event that they were awarded a contract (R. 323 [291]). *This shows there is a question as to the advisability of tying in the comparatively small requirements of the respondent with the enormous needs of the Consolidated and its affiliated companies.*

In 1919, gas oil was scarce and the requirements of the group of gas companies controlled by the Consolidated Gas Company were so enormous that probably only one or two refiners could have fulfilled them.

As shown by "Complainant's Exhibit 71" (R. 1581), *an agreement for the deliveries of oil required in the year* 1919 *was made on the* 18*th day of December*, 1918. *There is nothing in the record to show that any attempt was made at an earlier date to purchase oil, when the market price was low, and store it in tanks for future use.*

Without exception, all contracts for gas oil are made by Mr. Addicks with the Standard Oil Com-

pany of New Jersey. The particular contract in question calls for the delivery of 122 million gallons of gas oil, for consumption in the business of the Consolidated Gas Company in its various plants in New York City or the plants of such other companies as it may designate in the said City or in Westchester County. The purchaser is given an option to cancel, on or before May 1, 1919, its obligation to purchase one-half of the quantity specified in the contract.

It appears from the record that Mr. Addicks is not an officer of the respondent (R. 337). He is a director. He admitted that in the contract (Exhibit 71) it is not stated how many gallons of oil is the proportionate share for the respondent, but he let the New York and Queens Company have all the oil it wanted. How much that amounted to he did not know, although he thought it might be somewhere between a million and a million and a half gallons, which is, of course, a comparatively small quantity out of the 122 million gallons contracted for.

The witness Addicks tried to show that he attempted to get prices for some oil in quantities sufficient to meet only the needs of the respondent, but the cross-examination shows that he did no such thing. The only thing approaching evidence to the effect that an attempt was made to secure some oil sufficient to meet the needs of the respondent is in the interpretation by counsel for respondent of certain form letters written by the witness Addicks to certain oil companies. Those refiners received such letters periodically, but were never given a contract for oil by Mr. Addicks:

> "Q. Did you ever try to buy for them that quantity of oil from any company except the Standard Oil Company?

"A. I tried to buy any quantity of oil from any company at that time.

"Q. No, I am asking you if you ever tried to buy that requirement of that company alone from any company, like the Texas Company or the Gulf Refining Company?

"Mr. Ransom—I object to that as immaterial and incompetent, unless limited to this period. 'Ever' is a long time.

"The Master—Yes, I think I will sustain the objection as to an indefinite period.

"Q. Well, at this time?

"A. I got a price within this period from the Texas Company.

"Q. For that number of gallons?

"A. For a million to a million and a half gallons per month for six months, with the privilege of renewal for another six months.

"Q. What was the price?

"A. Eight cents.

"Q. From the Texas Company?

"A. Yes, sir.

"Q. In writing?

"A. Yes, sir, in writing.

"Q. Where is the letter, have you got it?

"A. I have.

"The Master—When you said a million and a half gallons, did you mean a million and a half a month?

"A. No, a million and a half gallons a year.

"Q. What is this?

"A. A million to a million and a half per month for a six months' period.

"Q. I asked you if you tried to buy a million and a half gallons—not a million and a half gallons a month—but the requirements of this company, from any company?

"A. I think I did.

"Q. That letter you speak of is the letter you wrote for the entire Consolidated system, is it not?

"A. Yes, but it included——

"Q. No, I am asking you, did you ask any

company if they could furnish a million and a half gallons a year?

"A. I did not write any letter different from what I have already testified to in the other case, and a copy of that is here.

"Q. We don't want that. That is to say, you made no effort, did you, in 1918, to buy the oil requirements of this New York & Queens Gas Company separately from the rest?

"Mr. Ransom—I object to that as incompetent and contrary to the facts. The witness has testified that he asked for a bid for any quantity of oil, however small.

"Mr. Chambers—He didn't say so.

"A. The letter says that I would be glad to be informed if they have any gas oil from 28 to 30 Baume for sale and the price per gallon.

"Q. Don't read that, that is 1919. We are talking about 1918.

"Mr. Ransom—We are talking about 1919.

"Mr. Chambers—I am talking about 1918.

"Mr. Ransom—The objection was sustained to 1918.

"The Master—I understand the question to relate to the 1919 requirements.

"The Witness—That is what I am testifying to.

"Q. In that letter you say, 'For your information would say that the quantity involved would be in the vicinity of 122,000,000 gallons.'

"Mr. Ransom—The companies understood that they could submit bids for any quantity, however small, as shown by the fact that they did.

"Q. Mr. Addicks, I am going to ask you a plain, simple question. Did you try to buy oil for the New York & Queens Gas Company in the quantity needed by that company only, without including your system?

"A. I tried to buy oil for the New York & Queens Gas Company collectively with our other companies——

"Q. No, did you try to buy oil for that company alone without including it with the others?

"The Master—Let us understand this. Mr. Addicks, Mr. Chambers intimates by his question that if you had tried to buy, as a separate proposition, a million and a half gallons of oil for the New York & Queens Gas Company that you could have done better than you did under the method that you pursued. He wants to know whether you made any effort to buy, as a separate proposition, a million and a half gallons of oil to cover the requirements of the New York & Queens Gas Company, and whether you made it clear to the people you were inquiring of that that was all you wanted?

"The Witness—I did not.

"Q. Do you know that the New York & Richmond Company was buying it for 5.75, from your own table in the Consolidated case?

"A. I do know in the case of the New York & Richmond that they did buy for 5.75.

"Q. And the Brooklyn Union—and the Bronx Gas & Electric were buying it——

"Mr. Ransom—When are you referring to?

"Mr. Chambers—1919.

"A. Yes, I inquired of that same company for oil and they said they were not able to furnish any.

"Q. What company was it, do you know?

"A. That was the Gulf Refining Company.

"Q. That was because you were asking for that large quantity?

"Mr. Ransom—Or any part of it.

"Mr. Chambers—He said he didn't try to buy in this limited quantity.

"Q. Was it not known that you were in the market to buy 122,000,000 gallons of gas oil?

"A. They knew that was the maximum that I was in the market for.

"Q. When anybody said 'Addicks' they knew that it meant 122,000,000 gallons?

"A. They knew we bought in large quantities.

"Q. They knew that Mr. Addicks was not around trying to buy a million and a half gallons?

"A. I was not trying to buy a million and a half gallons only.

"In the Bronx Gas & Electric case, it was 7.55?

"A. Yes, 7.55.

"Q. And the Brooklyn Union 6.08?

"Mr. Ransom—Yes, back in 1918.

"Mr. Chambers—1919, according to your own exhibit.

"Q. 6.08, wasn't it, in March, 1919?

"A. 6.08, and we were buying as low as 6.28 in 1919.

"Q. Your contract is not as low as that that you put in evidence?

"A. Not for the first part of it.

"Q. That contract does not say six something, in 1919, it is over seven cents?

"A. Yes.

"Q. How do you explain this table here?

"Mr. Ransom—I object to the question. Contracts made at different times——

"Q. How do you explain the fact that this contract is over seven cents when you were actually paying six and something?

"A. At this time, but this 6.08 is the same date exactly as our 6.08, the same date, March 26, 1919.

"Q. Now, I can't understand how you can conform that with the price stated on the Exhibit 74.

"The Master—This Exhibit 74 is dated December 4, 1919.

"Mr. Ransom—But it covers the requirements for March, 1919.

"The Master—How can it when it is dated December 4, 1919?

"Mr. Chambers—That is the second exhibit. Where is the other one?

"The Master—Exhibit 73 was dated March 28, 1919.

"Mr. Chambers—I want the December, 1918, exhibit.

"Q. Where is your contract that covers March 28, 1919, Mr. Addicks? Is this it?

"A. March 28, 1919, is this contract.

"Q. What price was it?

"A. That was one and one-half cents less than the price that was involved on February 8, 1919, and that price, as a matter of fact—the New York & Queens Company, the first price was 7.7172, and at that date that I have just mentioned it became 7.7833, and then 1½ cents less than that figure which dated from April 1st. That is 6.2833.

"Mr. Ransom—For the New York & Queens?

"The Witness—For the New York & Queens.

"Mr. Ransom—The Consolidated would be somewhat less.

"Mr. Chambers—Just wait a minute.

"Mr. Ransom—No, I won't let even you mix up the case.

"Mr. Chambers—I ask that counsel keep from interrupting when I am cross-examining.

"Q. In other words, Mr. Addicks, gas oil dropped from December, 1918—it went down one and one-half cents when we get up to March, 1919?

"A. Yes, they gave us a reduction of 1½ cents a gallon as of that date. The contract for that year enabled us to cancel the contract as of the *first* of July on a certain number of days' notice.

"Mr. Ransom—That is why 1919 costs were so low.

"Mr. Chambers—I move to strike that out.

"Mr. Neumann—The Witness Ransom is again testifying.

"The Master—No, he is not, and therefore I will not strike it out.

(R. 338-342 [320-326]).

The testimony of Addicks in relation to his attitude towards the Standard Oil Company of New Jersey is very illuminating. Questions were put to him concerning the probability that cheaper grades of oil would be used by gas companies in the future, and his evidence shows that, no matter how conditions might change, the Standard Oil Company will always be the beneficiary of contracts let by the Consolidated Gas Company and its subsidiaries, of which respondent is one.

"Q. You can give me so much of the answer as I have stricken out, which said for the last two months it has been stationary, Mr. Addicks?

"A. I should say that quotations were within were similar within narrow limits; I will put it that way.

"Q. For the last sixty days?

"A. Yes, and not increasing as rapidly as during a period of say, four or five months ago.

"Q. How does that level of the last sixty days compare with the level of 1919, the high level of 1919?

"A. I should say that

"Mr. Chambers—I make the same objection.

"The Master—Overruled.

"Mr. Chambers—Exception.

"A. I should say the price of oil today was double what it was in 1919.

"Q. I get the impression from what you

have said that you do not expect it to go much higher?

"Mr. Chambers—I think that answer ought to be stricken out; it was not responsive.

"The Master—Yes, I am going to let it stand. I think it was.

Mr. Chambers—Exception.

"Q. What is your opinion or judgment as to the future price; do you think it is going further up, or will it remain stationary where it was for the last sixty days.

"Mr. Chambers—I object to that as incompetent, irrelevant and immaterial and speculative.

"The Master—All opinion evidence is speculative.

"Mr. Chambers—The witness is not competent to guess as to the future, and it is not a subject for opinion testimony.

"Mr. Hyatt—There is a very extraordinary thing about this testimony, your Honor, in my humble opinion, and that is that there is no foundation given. Inasmuch as there is no market price for oil, how can this witness determine whether there is an upward trend or downward trend, or what the situation is. It seems to me he is testifying, giving his opinion, on something that does not exist in the case and does not exist in fact anywhere.

"The Master—He knows more about it than I do, and I am going to get his opinion about it.

"Mr. Hyatt—It is just a dignified guess, that is the only way I can characterize it.

"Q. What is your dignified guess which I term an opinion, Mr. Addicks?

"Mr. Chambers—Same objection.

"A. I think the tendency of the price of gas oil will be upward.

"Mr. Hyatt—Of course, that is objected to, your Honor.

"Q. Still up?

"A. Upward to a point where the gas companies will no longer purchase it for the manufacture of gas, and they will have to seek a source other than gas oil.

"Q. Seek a source other than what?

"A. Other than gas oil. In other words, a quality of oil, a lower grade of oil than has been used heretofore as a gas oil. In other words, it will require a lower B. T. U. standard in order to use some other quality of oil, and not make the candle power.

"Mr. Neumann—I move to strike it out, in reference to that part of it that states there is a lower grade of oil furnished.

"The Master—Yes, motion denied.

"Mr. Neumann—And also the part that the gas companies will have to use a different kind of oil.

"The Master—Motion denied.

"Mr. Neumann—Exception.

"Q. What makes you reach that conclusion; on what do you base that judgment?

"A. The great increase in the number of automobiles requiring more gasoline. The natural source of gasoline, that is the natural distillation of oil does not supply enough gasoline. The high pressure distillation method which has been introduced in the last four or five years takes up the gas oil, a certain portion of the process has taken up that source for gasoline, and the use of petroleum is going ahead faster than the production at the present time.

"Mr. Hyatt—I move to strike out the latter part of that, 'and the use of peroleum is going ahead faster than the production at the present time.'

"The Master—Motion denied.

"Mr. Hyatt—Exception.

"Mr. Chambers—I move to strike it all out as being Mr. Addicks' guess.

"The Master—Motion denied.

"Mr. Chambers—Exception.

"By Mr. Chambers:

"Q. Where are you going to get the lower grade oil?

"A. We will have to get the lower grade oil from the same sources that we have obtained the gas oil.

(R 370-1 [376-399].)

It is evident that the Standard Oil Company, which has always had the contracts for oil, will continue to get all of the business no matter what quality of oil is used for enriching the gas.

The Master was not impressed with the long term oil contracts made by other gas companies, which permitted them to get over the abnormal period without handing their profits to the Standard Oil Company.

By Mr. Chambers:

"Q. Mr. Adelicks, when we left off last week, a week ago today, we were talking about oil purchased by the Boston Consolidated and the Public Service of New Jersey. You said you had not heard of those contracts at four cents, the five-year contract?

"A. You did not say anything about Boston, you mentioned——

"Q. You knew about the contract, didn't you, of the Public Service of New Jersey, and the Gulf Refining Company, whereby the Public Service purchased from the Gulf Refining Company 252,000,000 gallons of oil covering the period from August 1, 1914, to July 31, 1919, at a price which runs from 3.05 to 3.55.

"Mr. Ransom—I object to that as incompetent and not within the issues here, no proof of any such state of facts before this Court in this case. It is an effort on the part of the

Attorney General to interject and misrepresent facts as to which he is charged with knowledge.

" Mr. Chambers—How am I misrepresenting any facts?

" Mr. Ransom—You have not offered any proof of the contract.

" Mr. Chambers—I am asking him what he knows about oil. He is called here as an expert on oil.

" The Master—Objection overruled.

" Mr. Ransom—Exception.

" Did you, Mr. Aldrich?

" I don't recall any figures except as you mention them. I do recall a figure of a certain contract which was not entirely fulfilled on the part of the Gulf Refining Company at somewhere in the vicinity of five cents, four to five cents.

" Didn't you hear the representative of the Gulf Refining Company testify at the last trial that that contract was lived up to?

" Mr. Ransom—I object to that as incompetent and not the proper method of proof. They cannot bind this complainant by asking this man on the stand whether he heard somebody else testify in another case to something which Mr. Chambers is willing, despite his oath as a member of the bar to state.

" The Master—Objection overruled.

" Mr. Ransom—Exception.

" A. The contract was not fulfilled. I heard him state that. He said they considered it fulfilled, but it was not delivered under the contract, all the oil was not delivered. I think it was about twenty per cent, according to my memory.

" Q. That is your recollection of his testimony?

" My recollection is that he said that they considered the contract was fulfilled, and that

the United Gas Improvement so accepted it, but as a matter of fact they did not deliver within twenty per cent. of the oil that was contracted for.

"Q. That is your recollection of his testimony?

"A. That is my recollection of the testimony, not only of himself, but of the other witnesses.

"Q. Will you look at that and see if that is not just as I stated it (showing paper to witness)?

"Mr. Ransom—I object to it as incompetent and not the proper method of proof. No contract is produced. He cannot ask this man in this case something about a copy of a document which was in another case; and no foundation has been laid.

"The Master—I think counsel ought to stipulate that all contracts and exhibits in the case can be offered here without formal proof.

"Mr. Ransom—I am willing to stipulate that all the testimony in the other case on the subject of gas oil and gas oil contracts shall be put in evidence in this case. In the absence of such a stipulation I shall continue to object to what seems to me a very improper and objectionable method of attempted proof.

"The Master—Objection overruled.

"Mr. Ransom—Exception. He is asking him to construe a copy of something that he produced. The witness doesn't know anything about it. This document was not proved by the witness even in the other case. There is no proof as to the identity of this document which is shown to the witness.

"The Master—The witness having read that paper, Mr. Chambers, what is your inquiry?

"Mr. Chambers—I am asking if that is not as I represented it to be in the question, as to the quantity and price.

"Mr. Ransom—I object to it as incompetent.

"The Master—Objection sustained.

"Mr. Chambers—Exception.

"Mr. Ransom—I offer to stipulate into this record all the testimony of all the witnesses who testified on the subject of gas oil for either the defendants or the complainant in the case of Consolidated Gas Company *vs.* Newton, before A. S. Gilbert as Special Master.

"Q. What were you paying for oil at the time this paper was dated here, Mr. Addicks, August 5, 1914?

"Mr. Ransom—I object to that as not the proper method of proving any such contract.

"The Master—Objection sustained, upon the ground that the 1914 prices are not in question here.

"Mr. Chambers—Exception.

"Q. Did you say you knew of the contract between the Boston Consolidated and the Gulf Refining Company?

"The Master—As of what period, Mr. Chambers?

"Mr. Chambers—Five year period, 1914 to 1919.

"Q. Were you acquainted with that?

"Mr. Ransom—I object to that as incompetent and not the proper method of proof.

"The Master—I will let Mr. Addicks answer that.

"A. I heard some testimony in regard to it, that is all.

"The Master—I am not going to have any more of what you heard. Do you know anything about that contract of your own knowledge?

"The Witness—Nothing, except what developed in the other case.

R. 351-3 [344-347].

As to the amount of oil used for enriching the gas, the evidence is sadly lacking in weight. There

is, in fact, affirmative proof of errors in the book records of respondent as is shown by the following testimony:

"Q. Mr. Morrison, I now show you paper marked 'Daily Record of Manufacture of New York & Queens Gas Company for the month of January, 1919,' which was produced by counsel for the complainant, and I will ask you to state whether that was the record that you had in mind when you testified as to the materials received and used (indicating)?

"A. It is.

"Q. And is this signature, 'M. Morrison, Works Superintendent,' your signature?

"A. It is.

"Q. You testified, did you not, that this was correct?

"A. I did.

"You testified that you had added up the columns and found them correct?

"A. I did.

"Q. I now direct your attention to the column marked 'Oil Used,' the figure in red '*ink*,' at the bottom of that column; 146,964 is intended to be the sum total of that column, is it not?

"A. It is.

Q. Will you add that and see if it is not incorrect, or I will say to the witness fairly that we have added it up and it is 149,964?

"The Master—What does he make it?

"Mr. Neumann—146,964.

"The Master—Add it up, Mr. Morrison, and see what you make it. What is the answer, Mr. Morrison?

"A. (Making computation) 149,964.

"By the Master:

"Q. 149,964 is right?

"A. Yes.

"Q. So there is an error there?

"A. There is an error.

"By Mr. Neumann:

"Q. An error of 3,000?

"A. Right.

"The Master—What is that, in oil, Mr. Neumann?

"Mr. Neumann—Yes.

"Q. Directing your attention to the bottom here, to the words 'Used in Manufacture,' you have copied down this incorrect total of 146,964?

"A. Yes.

"Q. Whoever did it. And that figure there should be 149,964?

"The Master—What was the total gas manufactured that month?

"Mr. Neumann—I do not think that has anything to do with it, if the Court pleases, at the present time.

"The Master—I would like to know.

"Mr. Neumann—What I am trying to develop at this time is this fact that the record is incorrect.

"The Master—How much gas was manufactured during the month?

"The Witness—32,903,000.

"Mr. Neumann—If the Master please, I object to that.

"The Master—How much?

"The Witness—32,903,000.

"The Master—What difference would it make, the 3,000 gallons of oil, in the quantity of oil used per thousand?

"The Witness—Very little."

R 578-9 [814-815].

Another error in the oil records is shown in the testimony of Superintendent Morrison. In reproducing this excerpt from the record we also draw attention to the attitude of the Master. He took the position that if appellants show an error on a

page of respondent's records and do not go through every figure in all of the books, it follows that appellants thus prove, by inference, that every other entry in the books is correct. Such a conclusion is manifestly unwarranted, and if carried out consistently would result in the burden of proof being shifted to the shoulders of the defendants. The testimony above referred to is reproduced below:

"Q. That would leave a balance of how many, or how much?

"A. (Making computation.) 158,606.

"Q. What is the figure you have there?

"A. 158,378.

"Q. That is a difference of 228?

"A. Right.

"Your figure, then, as the balance on hand on the 4th at 7 A. M. is incorrect?

"A. According to that it is.

"Q. Is there any doubt in your mind that your figure is incorrect?

"A. Well, the figures are correct there.

"Q. The figures are correct on the sheet?

"A. Yes.

"Q. Despite what I have shown to the contrary?

"A. Yes.

"Q. Explain, then, how you figure out 158,606 should be on hand on the 4th?

"A. Wait a minute, this figure is correct, 158,606.

"Q. That is correct?

"A. It is correct.

"Q. And there is a difference of 228?

"A. Yes.

"Mr. Neumann—These are all on the question of their correctness, that is what I am endeavoring to demonstrate.

"The Master—I am letting you show it. I do not see how it will help us any.

"Mr. Neumann—Here is a man who has

sworn these figures are correct and they go into the books.

"The Master—And the other answer to them is that except for the errors you show you are putting them up.

"Mr. Neumann—All right, I am taking a chance on that.

"Mr. Ransom—And Mr. Teele's exhibits are made up on a basis which this does not in any way challenge.

"Mr. Neumann—Mr. Teele says that he took these and checked them. If Mr. Teele's figures are wrong, this is wrong.

"The Master—I am indicating to you, Mr. Neumann, the impression that you are making on my mind, that the moment you prove that error on the sheet, you prove up the sheet. You show the amount of coal used and the quantity of oil used. I think you are helping the complainant's case.

"Mr. Neumann—And in view of the state of the record I have offered it, and I do not think that any reviewing court will determine from that that it had been proven.

"The Master—Very well, go ahead.

"Mr. Neumann—These are intended solely and wholly to impeach the witness' testimony.

"The Master—But you are making other evidence while you are doing it.

(R. 582-3 [820-1].)

These excerpts from the testimony do not complete the record of errors made in the books relating to the amount of oil used (R 585-6, 602-3). We claim that Mr. Neumann, by the questions put to Mr. Morrison, cast serious doubt upon the records relating to the amount of oil used. Inasmuch as Teele's tabulations of cost were taken from the books, and Morrison's records form one step in the process of getting the figures of cost on the books, Teele's figures are proved unreliable to the same

extent as the underlying figures on which he had to rely.

For the reason that appellants were not in a position to call witnesses to testify concerning the fair cost of oil or the reasonable quantity to be used in the manufacture of gas, we can make no definite claim regarding the just amount that should be allowed in the operating expense for gas oil. However, in view of Wood's testimony in the Consolidated case, referred to in the present case (R. 434), that 4.1 gallons per M. feet of gas made is the reasonable amount, and noting the use of 4.19 gallons in respondent's plant during the year 1919, when errors in the plant records were admittedly made; and taking into account the testimony of Morrison, which evidently impressed the Master on account of the large amount of oil reported used (R. 607), we respectfully suggest that the respondent cannot complain if the fair quantity of oil is found by this Court at 4.1 gallons per thousand cubic feet of gas made. The price paid to the Standard Oil Company in 1919 was undoubtedly high, but to what extent we cannot determine from the record. Using the price shown in Teele's tabulations (R. 1569) $.067 per gallon, and 4.1 gallons per thousand, the expense would be $.2747 per thousand cubic feet as against the book figures for the year 1919 (R. 1569) of $.282. The saving would therefore be .73 cents per thousand cubic feet of gas made and .83 cents on the basis of each M. cubic feet of gas sold, allowing for the cost of the unaccounted for gas.

The next important item of expense is for Gas-making Labor, the books recording $.0631 per thousand cubic feet of gas made and Wood's figures being $.0671 per thousand. It is evident that the

testimony of Spear was not intended to prove the expense incurred for gas-production labor. The Master commented on the fact that Spear merely described the system in use:

> "Q. What is your system of keeping track of the labor elements entering into your various departments?
>
> "A. The superintendent has a distribution sheet for each employee, each man at the plant, and——
>
> "Q. He has a time card, which permits of a showing of the distribution of his time?
>
> "A. Yes.
>
> "Mr. Neumann—Why not let the witness say it, Mr. Ransom? He was going along in good shape.
>
> "The Witness—Yes, he has a distribution sheet, with the man's name on it, and then it has the various accounts on the upper part, and the dates down the side. It runs for a month. He puts the man's name down opposite each account that he worked the previous day, and then once a week he totals it and makes up his payroll from that, and the payroll goes through the accounting department. At the end of the month this distribution sheet is checked and the distribution put on the back of the payroll."
>
> * * * * * * * * *
>
> "Mr. Chambers—I think we ought to object to that. I think he is going too far, and you ought to get that information from the person himself. I object to it as incompetent, irrelevant, immaterial and hearsay.
>
> "The Master—I think the witness is just describing a system.
>
> "Mr. Chambers—If it is limited to that, I think that might be all right."

(R. 184-5 [61:3]).

The Master, in the Consolidated Gas case, accepted the books in evidence without requiring proof of the entries therein. In the present case the same Master seemed inclined at the beginning of the trial to insist upon proper proof, but in the end he let the books in with no better evidence of their accuracy than he had in the Consolidated case.

"Q. Will you describe what books of account and subsidiary records were kept by the New York and Queens Gas Company during the years 1919 and 1920.

"The Master—Do you believe that this will be a case where I am forced to take in general books of account, the same as I did in the Consolidated case?

"Mr. Ransome—I so think.

"The Master—I should not imagine it would be very difficult to put in somewhat better proof here.

"Mr. Ransom—I think we will be able to produce somewhat more detailed proof in certain respects.

"The Master—You can have the man who made the entries in books, I imagine, and bring in the original papers, with a small company like this.

"Mr. Ransom—We can do something like that.

"Mr. Tobin—Mr. Master, I think Mr. Neumann's objection is good—that is, his last objection. There is nothing shown yet that Mr. Spear is in real touch with the books of the company.

"The Master—His objection was not good, Mr. Tobin, because the inquiry was simply, what did he have to do with them. Now he has told us what he had to do with them. There may be another objection come along based on that; but that objection was not useful.

"Mr. Neuman—It was a very clumsy ques-

tion, and I did not get the purport of it, myself.

"The Master—What was the last question?

"Q. (Repeated by the stenographer.)

"A. General Ledger No. 1——

"Q. Which covers what?

"A. January, 1919, to date.

"Mr. Neumann—You are now reading from a memorandum, are you, Mr. Spear?

"The Witness—Yes. General Journal No. 5, from September, 1918, to date; General Cash Book No. 3, July, 1916, to date; Accounts Payable Ledger, No. 1, January, 1919, to date; Operating Expense Ledger No. 2, January, 1919, to date.

"Subsidiary to that, are the Accounts Receivable Ledger, Sundry Debtor Blotters, then Consumers' Ledgers A. to I, inclusive, and K, and four Prepayment Ledgers, Bill Register, Pay Rolls, Vouchers and reports of various departments."

There was not one witness called on behalf of respondent to testify as to the original records of labor cost incurred at the plant. Mr. Teele, a certified public accountant, who made tabulations from the books, described the nature of the work done by his men, under his direction, in making a limited audit of certain records, covering a period of four months, kept by respondent. (R. 220-29 [122-138]). He also testified:

"A. Then into the journal and from there into the ledger account from which these statements were compiled.

"As to expenditures for labor, the company has three different payrolls, office pay roll, works pay roll and shop pay roll.

"The first pay roll—the distribution of the office payroll— it has entries upon it, and the entries distributing that pay roll were traced

from the pay roll itself to the journal and from there to the ledger.

"The shop pay rolls are distributed in accordance with the endorsements appearing upon the pay rolls, and the payrolls themselves, the endorsements are made up by taking the monthly distribution sheets of the individual workmen whose names appear upon the shop pay rolls, and compiling those for the month. The total amount to be charged to each account is then endorsed upon the back of the shop pay roll.

"A similar method is followed in the case of the works pay roll. The monthly distribution of each man's time is shown upon the sheet for each man. Those sheets are compiled, the total amounts being charged for each account being the aggregate total pay roll for the month, is then endorsed upon the pay roll. The accounts to be charged, and the amounts to be charged against each account, are shown by this endorsement and entered in the journal, and from there posted into the ledger accounts.

"Q. Then so far as the cost of labor, so far as the men in the manufacturing department and the other departments of the company are concerned, these exhibits 64 and 65 for identification have been checked both to the books and to the various payrolls?

"A. And to the various pay rolls.

"Q. And the books were likewise, as postings, checked back to the pay rolls?

"A. The postings appearing in the ledgers were checked back to their original sources.

"Q. The postings in the ledger were traced back to their sources?

"Q. The postings in the ledger were traced back to their sources?

"A. They were.

"Q. What if anything was done by you to verify and check the correctness of these departmental pay rolls?

"A. I have just stated how these pay rolls are compiled. We checked the monthly distribution sheets against the several monthly pay rolls, both the shop pay roll and the works pay roll. In the case of the shop pay roll I took four months in 1919, and went back to the individual daily workmen's time sheets. That is a sheet made out each day by the workman, indicating the work upon which he is engaged and the number of hours he was engaged upon that work.

"Mr. Neumann—I object to that on the ground that there is nothing here shown as to this witness' knowledge and ability to testify as to what any particular workman did.

"The Master—Objection overruled.

"Mr. Neumann—Exception.

"Mr. Tobin—Exception.

"A. (Continued). I checked the four months of these individual sheets against the monthly sheets, and then checked all the monthly sheets to the monthly journal entries where the distribution of that time is indicated, and charged to the various ledger accounts.

"Q. What about the works pay roll and the manufacturing department pay roll? What checks back did you make on those?

"A. *There is nothing, so far as I could find, back of the monthly sheets kept for each man.*

"Q. There is a monthly sheet kept for each man?

"A. There is a monthly sheet kept for each man in which the days of the month are set down on the left hand side, and the accounts to be charged are at the tops of the sheets, and the time each day for each man is put on those sheets.

"Q. And charged to different account numbers?

"A. Charged to different account numbers.

"Q. Those being the various uniform system of accounts lettered accounts, or by numbers?

"Mr. Neumann—I object to that as incompetent, irrelevant and immaterial and no foundation laid."

(R. 228-9 [136-8]).

Martin Morrison was called as a witness by respondent. He is the Superintendent of the gas works at Flushing (R. 569). His direct testimony covers just about eight pages of this record, two of them devoted to his qualifications. His testimony, as to labor expense, is of a very indirect character as may be noted by the following excerpt:

"Q. Do you keep a daily manufacturing record?

"A. I do.

"Q. Of the operations of the company at the works?

"A. I do.

"Q. Is this record kept on a large sheet covering the entire month?

"A. It is.

"Q. Are the entries thereon made daily showing the results of operations for each day?

"A. They are.

"Q. Who makes the entries on this record?

"A. The clerk, when I have one. When I have not I do it myself, personally.

"Q. When the record has been made up, either by yourself or by a clerk, do you personally check the accuracy of the entries and the computations?

"A. I do.

"Q. That is, you always go over both the computations and the entries?

"Mr. Neumann—That is objected to as incompetent, irrelevant and immaterial and a conclusion.

"The Master—Overruled.

"Mr. Neumann—Exception.

"The Master—What is your answer, Mr. Morrison?

"A. I do.

"Q. What is done with this report at the end of the month?

"A. It is totaled and sent to Mr. Spear.

"Q. Is it certified to by you?

"A. It is certified to and signed by me."

(R. 574 [806-7]).

On cross-examination he was interrogated as to the making up of the work's pay-roll:

"Q. Have you anything to do with the pay-rolls, the works?

"A. Yes.

"Q. What part do you have to do with the work's payroll?

"A. I make it up.

"Q. You make it up each week?

"A. Each week.

"Q. That is, you certify to the works pay-roll?

"A. No, I make it up and certify to it as well.

"Q. Then you turn that payroll over to whom?

"A. To Mr. Raynor.

"Is that the only payroll that you make up, the works payroll?

"A. That is all.

"By the Master:

"Q. Do you carry anybody on that payroll that is not actually employed?

"A. Absolutely not.

"Q. Do you carry any amount in there that is not actually paid?

"A. No, sir.

"Q. Do you carry any man that you don't actually need?

"A. We can't get all we need.

"By Mr. Tobin:

"Q. Does your position as superintendent extend beyond the actual manufacture of gas?

"A. No.

"Q. The work in the office is in charge of someone else?

"A. Yes, sir.

"Q. Your work is entirely that of the works?

"A. Entirely.

"Mr. Tobin—We would like, if the Master please, an opportunity to——

"The Master—Have you asked everything that you are prepared to ask?

"Mr. Tobin—At this moment, yes.

"Q. Who makes up the shop payroll?

"A. I don't know anything about the shop.

"Q. You don't know who makes that payroll?

"A. No, I do not.

"The Master—Now, are you all through?

"Mr. Tobin—As far as I can at this time determine.

"The Master—Have you anything else to ask now?

"Mr. Tobin—No, sir.

"The Master—Have you, Mr. Neumann?

"Mr. Neumann—Not at the present time.

"The Master—The cross-examination is ended. I shall permit you, however, to recall Mr. Morrison for further cross-examination before I permit counsel to rest his case. I want to protect the complainant against anything happening, that is all.

"Mr. Neumann—All we want is a reasonable opportunity to take this up, in view of Mr. Frank's situation.

"The Master—I am protecting the party that called the witness, and I am going to give you an apportunity to recall him if you find you have any more questions to ask him."

(R. 599-600 [848-850].)

It is evident that the mere making of the payroll, and the ready answer of Morrison, to the Mas-

ter's question, that he pays only men that are employed and that he needs, does not constitute proof that the books accurately reflect the proper and reasonable expense of producing gas. It does not follow, because certain moneys are paid to men employed by respondent, that the expense reported incurred is properly allocated on the books to production or capital account.

Wood's testimony concerning the labor cost at a hypothetical plant did not cure the defects of proof in respondent's evidence anent labor charges. Wood's testimony as to gas making labor is as follows:

> "Q. What employees, in your judgment, are necessary for the efficient and proper operation of the plant that we have been describing?
>
> "The Master—Of this Flushing plant, what kind of repair labor do you need?
>
> "Mr. Ransom—I am speaking of gas-making labor first.
>
> "The Master—Well, gas-making labor.
>
> "Mr. Neumann—Objected to on the ground it is incompetent, irrelevant and immaterial, already covered by Exhibits 58 and 59—or Exhibit 58 only.
>
> "The Master—Overruled.
>
> By the Master:
>
> "Q. You have set out on this statement you have prepared the various kinds of gas-making labor and the number of men needed, have you not?
>
> "Yes, sir.
>
> "Mr. Ransom—And the rates of pay.
>
> "Q. And the rates of pay?
>
> "A. Yes, sir.
>
> R. 419-20 [461-2].

The Master took Wood's estimate of cost as evi-

dence that the book records of production cost are reasonable, as appears from the following:

"The Master—No, I have taken them on the same theory that I took them in the Consolidated Gas case. I do not want to rely entirely on the books as indicating a result, nor do I want to rely entirely on the sworn testimony of the witness' opinion; but when I find, assuming that I am satisfied in this case that the books have been properly and correctly kept, and in due course of business, that those operating records actually show substantially what Mr. Wood's says the plant will do, and when there is no other witness to take issue with Mr. Woods as to what a plant like this, or this plant, will do, I am quite satisfied that the figures shown to me, checked up by operating results are correct. To illustrate what I did in the Consolidated Gas case, I took Mr. Wood's statement of what he thought it ought to do. I checked it up by operating results as per the books. In some instance I found that the books show slightly less coal or fuel used than the quantity Mr. Woods said ought to be used, and I therefore felt that the operating results appearing from the books, in the light of the sworn testimony given by Mr. Woods, could be relied on, and I did rely on them, and I based my decision on the books themselves and the operating results.

"That is what I am going to do here. If when I get the books before me, and Mr. Teele's exhibits, I find that the operating results tally with what Mr. Woods says it will do and should do, and I do not hear any other witness come on the stand and take issue with Mr. Woods on the quantity of coal and oil used——

"Mr. Cummings—Why didn't they do that first?

"The Master—The books are in evidence; Mr. Teele put the books in evidence. I want

his testimony confirmative and corroborative of the books' actual operating results. That to my mind is one way of getting a good result.

"Mr. Chambers—I want to say on the record that if we do not challenge Mr. Woods' hypothetical figures and you draw the inference we cannot challenge them—I want to say you will be mistaken, because we rely on the fact that you cannot do this, as Mr. O'Brien says, in capsule form.

"The Master—All right, you take your chances on that.

"Mr. Chambers—We consider it incompetent.

"The Master—The record before me is the testimony of Mr. Woods' that certain quantities are necessarily used in the efficient operation of this plant, and if there is not any sworn proof to the contrary, I am going to assume that there cannot be any.

"Mr. Chambers—You will be in error if you do that.

"Mr. Cummings—Then you shift the burden on to us.

"The Master—The burden is on you when Mr. Woods comes in and says that it takes a certain quantity of coal and oil and labor to produce a thousand cubic feet of gas.

"Mr. Cummings—Not in a plant of his own creation.

"The Master—In any plant—and the books show that it does substantially that very thing, the burden shifts to you to show that it is wrong.

"Mr. Cummings—But the minutes you let him create a plant in his own mind, that is different.

"The Master—The record shows what it is.

"Mr. Ransom—This may be marked.

"The Master—Yes."

(R. 1234 [1689].)

Woods' figures on labor were shown to be unreasonable by the cross-examination, as appears below:

"Q. Now, Mr. Woods, gas-making labor, in the Consolidated case you fixed a figure of 2½ cents per thousand cubic feet.

"A. I did.

"Q. Here you jump that to 6.71 cents.

"A. Yes.

"Making a difference of nearly 4¼ cents?

"Mr. Ransom—That was last September. There have been several increases in pay since then.

"Q. And it is 4 cents, nearly 1¾ cents more per thousand cubic feet?

"A. Yes.

"Q. Did you base that on any records of the company?

"A. No, I know the number of men required to operate a plant of that kind.

"For instance, you have a gas-maker who makes a million feet a day, in three shifts they would make a million feet for each of these machines, and in a larger plant, where they had larger machines, in a plant capable of handling larger machines that same gas-maker would make three million, so for the gas-maker himself it would be three times as much as in the large plant where they have these large individual units. You could not afford to put up individual units of that kind in a plant like Flushing, you would have to rebuild the plant entirely in order to handle the proposition.

"Q. Four cents more to gas in a million cubic-foot company than in a ten million company.

"Mr. Ransom—I object to that. He is comparing September, 1919, with April, 1920, whereas the proof in the Consolidated case showed two increases in pay after the September figure.

"The Master—Objection overruled.

"Mr. Ransom—Exception.

"A. The gas manufacturing labor in a plant such as exists there would be infinitely more than in a plant making ten million cubic feet a day.

"Q. You figure one superintendent here at $5,75?

"A. Yes, sir.

"Q. In the Consolidated how many superintendents did you figure?

"A. One superintendent.

"Q. At the same price?

"A. No.

"Q. How much did you give him?

"A. I don't recall the testimony that I gave now. I would not like to give it offhand again.

"Q. Wouldn't the superintendent be about the same?

"A. No, the superintendent in a larger plant would be getting more money.

"Q. $5,000 a year—that is what you testified to in the Consolidated case, isn't it?

"A. Right.

"Q. How much a year would you give the superintendent?

"A. That figures, I think, about $2,100, including his house rent, or, he lives in the plant. I make it on a ten million a day, with a man getting $5,000 a year. Here is a plant making one million a day, and the superintendent getting $2,100 a year.

"Q. Plus his house?

"A. Plus his house.

"Q. How much do you figure that at?

"A. I didn't figure his house. I suppose it would be $600 to $700 a year.

"Q. That would make about $2,699 or $2,700.

"A. Yes.

"By Mr. Ransom:

"Q. House rent is not in this figure, is it?

"A. No.

"By Mr. Chambers:

"Q. You have a clerk here at what, $4 a day?

"A. $4 a day.

"Mr. Neumann—I move to strike out the question of counsel, because that house is figured in the plant.

"Mr. Ransom—Not in the $5.75 a day figure.

"Mr. Neumann—But that is added in the whole plant.

"Mr. Ransom—We will add to these costs whatever you say the value of the house is.

"Q. You have not figured the superintendent's house in this?

"A. No.

"Q. Not a clerk—how many clerks did you have when you testified in the Consolidated Gas Company case?

"A. I don't recollect now.

"Q. More than one.

"A. One or two, probably a clerk and assistant.

"Q. And here you only have one?

"A. Yes.

"Q. You have three gas makers here on this Exhibit 77?

"Yes.

"Q. At $4.64 a day?

"A. An average price of——

"Q. How many gas-makers did you have when you testified in the Consolidated case?

"A. I don't recollect the number now. I would have to make the calculation again to find out. Gas-making labor on the other statement, there were so many things involved that I don't recall just now, unless I went into it.

"Q. You have three engineers here?

"A. Yes.

"Q. At $4.88 a day?

"A. The law requires that we have the plant covered by an engineer at all times.

"Q. How many engineers did you have in the Consolidated case?

"A. I don't recollect the number; probably more than that.

"Q. More than three?

"A. Yes, because we have exhausted attendants and turbine attendants from time to time.

"Q. Now, two boiler firemen you have on Exhibit 77?

"A. Yes.

"Q. At $4.48?

"A. Yes.

"Q. How many boiler firemen did you have in the Consolidated case?

"A. I don't recall the figure now; I would not undertake to give it to you from memory.

"Q. More than two?

"A. Yes.

"Q. Two generator firemen and coal passers you have here?

"A. Right.

"Q. At $4.48 a day?

"A. Yes, sir.

"Q. How much did you pay—they were both firemen and coal passers?

"A. Yes, sir.

"Q. How many firemen and coal passers did you have when you testified in the Consolidated case?

"A. More than that; I don't recollect the number.

"Q. You have two laborers here at $4?

"A. Yes, sir.

"Q. How many boilers did you testify to in the Consolidated case?

"A. I don't recollect.

"Q. Now, you have Sunday and holiday overtime?

"A. Right.

"Q. $2.73?

"A. Right.

"Q. What does that $2.73 relate to?

"A. Because some of these men are paid time and a half for overtime for Sunday and holiday work.

"Q. What is that?

"A. That is a percentage of their daily pay when they work Sunday and holidays, for which they get time and a half.

"Q. All those figures are based on your own idea?

"A. Those figures are based upon the rates of pay that are being paid by the Flushing Company. I know it requires that number of men to perform that work.

"Q. Were the same last fall?

"A. No.

"Q. Substantially the same?

"A. No, they were somewhat less, I think.

"Q. Were they?

"A. Yes.

"Q. How much less for gas-making?

"A. I don't recollect the exact amount, but I know there has been a change made since last fall.

"Q. In those very men at that plant?

"A. Yes.

"Q. But you don't know how much?

"A. I am not undertaking to say from memory just how much it was.

"Q. How do you explain the difference of four cents here to make a thousand cubic feet of gas than you testified to as of October 16, 1919?

"Mr. Ransom—I object to that as already fully covered.

"The Master—Objection overruled.

"Mr. Ransom—Exception.

"A. Because of the difference in the character of the plant and the unit which a man

can produce at that plant as compared with a plant such as I testified to. If you have one five-ton truck, Mr. Chambers, and five one-ton trucks, they cannot be as economically and efficiently operated as the one five-ton truck. The conditions might be such that you could not operate the five-ton truck and would have to operate the five one-ton trucks.

"Q. How many machines did you have in the ten million cubic foot plant, gas machines?

"A. I don't recollect, probably four or five machines, operating four or five machines.

"Q. That is only one more than you have here in this million cubic feet?

"A. No, we are operating those continuously. I had three to four machines in operation all the time in the ten million plant, with a standby for cleaning and recheckering.

"Q. How many machines in all in that plant?

"A. I think five or six machines.

"Q. That is three more than here?

"A. Yes, but different sized machines.

"Q. And yet you are able to run them for less than you with three machines?

"A. We are talking now about cost per thousand cubic feet. You can operate them for less per thousand cubic feet, naturally.

"Q. You testified in October that you could run, according to that, six machines four cents cheaper than you could run, so far as labor is concerned, three machines?

"The Master—Per thousand cubic feet?

"A. Per thousand cubic feet. I did not testify to any such thing, as you have asked the question.

"Mr. Ranson—The figure relates to the entire process of gas making, and not merely to the machine.

"Q. Well, what would you testify to in that regard?

"A. I testify that in a plant such as I testified to in October, 1919, as bearing upon the

Consolidated Gas Company's system, which did not include the Flushing Company in any sense, that a fair operating condition was two and one-half cents per thousand cubic feet for gas making labor.

"Q. If you had a plant of twenty million cubic feet capacity, could you operate it for less than these figures that you have in October, 1919?

"A. I could not.

"Q. There would be a decrease?

"A. No.

"Q. How about the other way, the converse?

"A. If you can operate a plant continuously anywhere from five to ten million—if you recall, Mr. Chambers, in my testimony, I testified to a plant on an average condition operating on ten million feet a day, and that plant would run anywhere from seven and one-half to fifteen or eighteen million. I took a fair operating condition throughout the year. At times the gas making labor would be somewhat less than two and one-half cents, and at other times it would be somewhat more than two and one-half cents, but I believe, under the conditions under which we were operating, a fair amount was two and one-half cents per thousand cubic feet.

"Q. This company out there does not make a million cubic feet a day?

"A. They do.

"Q. They make a good deal more than?

"A. They will make slightly more than that; they average that.

"Q. Didn't you hear testimony that it was 1,600,000?

"A. That is a maximum capacity. They probably gave you a send-out of 1,600,000. I do not recall the exact figure, but I think their annual send-out was around 375 to 380 million cubic feet make, which would be close to an average make of 1,000,000 a day. A million a day would be 365 million. Their average make was probably 1,050,000 a day.

"Q. They make sometimes 1,600,000?

"A. Yes.

"Q. Wouldn't that cut the cost down?

"A. Yes, and if they made less than a million it would probably bring it up.

"Q. Do they make less than a million that you know of?

"A. There are times when it must be less than a million to get an average throughout the year of slightly more than a million.

"Q. Then they could close down one of the machines and relieve some of these gas-makers and others.

"A. I took it as a condition of operating a million a day. At times their cost may be a little more, and at times a little bit less than that.

"Q. I don't quite understand these Sundays and holidays here overtime, Mr. Woods. You didn't have that in the Consolidated case, at least not so we could see it.

"Mr. Ransom—I object to that as incompetent and not the proper way of proving a statement in the Consolidated case, which was made up on a somewhat different basis. He did not in his Exhibit 353 for Identification undertake to give the details of the different classes of labor and rates of pay. He submitted a separate statement which showed the rates of pay and of overtime.

"The Master—Objection overruled.

"Q. You didn't have any such item in your Exhibit 353 for Identification in the Consolidated case, did you?

"A. I don't recollect. I think probably an allowance was made in figuring up the cost per thousand cubic feet that was taken into consideration. It was not shown in the Exhibit in the Consolidated case as it has been shown there.

"Q. Did you base this 82.73 on the practice of the company?

"A. On the practice of the company, time and a half for overtime for Sunday and holiday work.

"Q. And that is based on that?

"A. That is right.

"Q. For these different men here?

"A. That is right.

"Q. Now, have they as many men as you have set forth there over in the plant?

"A. I should say they have, yes.

"Q. Well, do you know?

"A. I should say so.

"Q. That is, have they a superintendent, one clerk, three gas-makers, three engineers, two boiler firemen, two generator firemen and coal passers, and two laborers?

"A. I would say so, yes.

"Q. Are you sure about that?

"A. I am quite sure that they have that many men.

"Q. You don't know what they pay them over there, do you?

"A. I do.

"Q. Those prices?

"A. Those are the average rates. The gas-makers and engineers are not all paid the same rate. The average rate for those different classes is there.

"Q. The superintendent, do you know what he gets over there?

"A. I do.

"Q. What does he get?

"A. $2,100 a year, I believe.

"Q. And his maintenance, his house there?

"A. His house.

"Q. Does he pay rent for that?

"A. No, he doesn't pay any rent that I know of.

"Q. Now, the clerk?

"A. The clerk I have there at $4 a day. Just what they are paying the clerk I don't know. I don't believe they are paying quite that, be-

cause they have a new clerk they just put on, and he probably is not getting $1. $1 is what they will have to pay as soon as he is broken in.

"Q. What are the gas-makers getting over there?

"A. The average rate is as indicated on that exhibit.

"Q. Then they have got three over there?

"A. Yes.

"Q. And three engineers?

"A. Right.

"Q. At these prices?

"A. Right.

"Q. That is, some of them are getting less, I take it, and some more?

"A. Yes, for all three that would be the rate.

"Q. Now, repair labor—they have two mechanics over there?

"A. Not always.

"Q. But you have two here steady?

"A. I testified that on the average they would have two. They may have two or three at one time and they may not have any for a day or two, because they have different classes of work to perform, and they have to call in men to get that work done; but in my judgment the average employed on repair work would represent what I have indicated on the exhibit.

"Q. A helper—have they got a helper over there?

"A. They would have when the work is going on.

"Q. Isn't work going on?

"A. There is always some minor repair work going on. On other days there may be some extensive repairs where they will want to put extra men on the work.

"Q. Is that a pretty high price, $1?

"A. That is the best we can get. It is a question of how long we can get that. We are

paying more than that for a good many of our laborers now.

"Q. Labor is very high now?

"A. It is considerably higher than it was last October when I testified, and it looks as if it might go higher still, due to our present inability to get men.

"Q. You don't know whether it will ever stop, do you?

"A. God knows I hope so."

(111-118 | 499-510.)

The foregoing testimony was not corroborated by General Manager Spear, as appears below:

"Q. Taking the item off gas-making labor, has the company employed at any time during the year 1919 any more than one superintendent?

"A. No.

"Q. Has employed how many clerks in that particular branch of the works?

"A. One.

"Q. And how many gas-makers?

"A. Three.

"Q. Is that the average, three, or is that the extreme number employed?

"A. Three would be the extreme number, except that we have an extra man broken in in case of sickness of one of the gas-makers that could take his place, but we only use the three where we are running three shifts.

"Q. Taking the twelve months, for how many months would you employ three gas-makers during the year 1919?

"A. I can't tell that without looking over the records.

"Q. Would you employ two gas-makers for most of the year?

"A. That is pretty hard to say. I say possibly two and a half for the year 1919, it might average that.

"Q. It would average about two and a half?

"A. It might; I can't tell, except from the records.

"Q. That would be your judgment?

"A. I would not want to say positively on that without a study of it."

(641-2 [918].)

It is our belief that an allowance for labor used in the production of gas, based upon the record, should not exceed 5 cents per thousand cubic feet. This we arrive at by averaging the amounts testified to by Woods in the Consolidated case and in the instant proceeding (R. 441). The actual figures in the record are, respectively, 2.5 and 6.71 cents, and an average of the two would be 4.6 cents, which we call 5 cents. The saving as compared with the book cost of 6.31 cents, would thus be 1.31 cents per thousand, or, on a spread of 336,241.4 thousand cubic feet, the saving would be equal to $1,404.76, on the basis of gas made, or nearly $5,000, on the basis of per thousand feet sold. The next item of consequence in the cost of producing gas is the alleged expense incurred for repairs to works, reported by Teele as $0.0735 per thousand cubic feet of gas made (R. 1570). Even Woods, respondent's expert gas engineer, could not vouch for the reasonableness of such a cost, his estimate being $0.0530 per thousand cubic feet (R. 1597). Woods' figure for repair material in the hypothetical plant is just twice as much as he testified was reasonable in another hypothetical plant that was used as a basis by him in the Consolidated Gas case (R. 449).

"Q. Your Exhibit 353, for Identification in the Consolidate case was not based on the Consolidated plant, was it?

"A. It was based on their rates of pay, of the system.

"Q. Now, the repair material, you have 3 cents here?

"A. Yes, sir; right.

"Q. And in the Consolidated case you had $1\frac{1}{2}$ cents?

"A. Right.

"The Master—Why should the repair material cost any more?

"The Witness—Because your Honor, in making repairs for instance, in repairing machines and repairing the steel work, repairing the door-frames, all these repairs that must take place, these machines won't run any longer a period of time than with the larger machine, but the unit of production is considerably less, so that the actual cost of repair is practically the same as on the larger amount, but, owing to the production the cost per thousand cubic feet is lower.

"The Master—Do you think 3 cents is pretty liberal?

"The Witness—I think, taking it year in and year out 3 cents would be a fair cost of material.

"The Master—Then 1.69 is high?

"The Witness—I think taken on the average that would probably be a little high.

"Q. Don't you think you could cut that 3 cents down a little?

"A. No, I do not; if I had thought it was lower, I would have put it lower."

(R. 449-50 [513].)

It is our firm belief that the matter of maintenance cost in a gas works is one requiring close scrutiny. It is obvious that the repairs may be deferred during periods of stress such as arise during war times, and this means an abnormal amount of repair work has to be undertaken at a later period. Take as an illustration the figures

appearing in appellant's Exhibit A-14, which we reproduce below:

Repairs, Works and Holders.

Year	c. per thousand cubic feet
1909	1.53
1910	1.75
1911	2.21
1912	2.20
1913	2.25
1914	2.26
1915	2.18
1916	2.50
1917	2.65
1918	3.52
1919	7.35

The expense for 1919 is obviously unreasonable. An average of all years prior to 1919 shows a cost of 2.305. If we add 50 per cent. to take care of increase in cost of labor and material, the cost would be less than 3.5 cents per thousand cubic feet of gas made. We claim that anything over that would be excessive. As compared with the Master's finding, based upon the books, that 7.35c. per thousand is reasonable, this fair cost of 3.5c. would result in a saving of 3.85c. per thousand cubic feet of gas made, and on a spread of 336,241.4 thousand feet, the reduction in operating expense would amount to $12,945.29 per annum, on the basis of gas made, and of close to $14,600 on the basis of the gas sold.

The next item meriting consideration is the cost of making that part of the gas which is subsequently not accounted for. Teele's tabulation reports the expense for this leakage and condensation loss at 8.28 cents per thousand cubic feet—

the difference between 8.6345 (R. 1570) and 8.7173 (R. 1571).

The Master found (No. 23) that "so-called unaccounted-for gas, in the instance of the complainant company, reasonably represents approximately eleven per cent. (11.03 per cent.) of the gas made, and that in calculating the requirements of the complainant, that percentage should be used as a basis for computation" (39). The Master on this occasion did not place the reliance on Woods' opinion testimony that he indicated he would. He accepted the book figures, notwithstanding that Woods' testimony shows the amount of gas reported last is excessive.

> "Q. Mr. Woods, taking into account all of the factors known to you and appearing with reference to the New York and Queens Gas Company, do you consider 10 per cent. of gas made as the percentage of gas unaccounted for a reasonable or an unreasonable condition?
>
> "Mr. Neumann—Objected to on the ground it is incompetent, irrelevant and immaterial.
>
> "Mr. Hyatt—And nothing shown here as to his experience with other companies.
>
> "Mr. Neumann—It is not shown as within this witness' qualifications, not the subject of opinion testimony, and highly speculative.
>
> "Mr. Hyatt—In this particular field he has not qualified, your Honor, as I remember it, as to the unaccounted for gas of other companies.
>
> "The Master—Objections overruled.
>
> "Mr. Neumann—Exception.
>
> "The Master—Any man who has run a gas plant for twenty years knows something about other gas plants.
>
> "Mr. Hyatt—He has been with the company for twenty years, but I do not know that he had anything to do with unaccounted for gas of other companies.

" Mr. Chambers—We should try this case on the facts in it.

" Mr. Neumann—He may know something about congested districts, but he does not know——

" The Master—He has been connected with this company since 1901.

" Mr. Chambers—Well, as to the unaccounted for, what is the use judging from his experience in other companies? You are going to judge this case on the experience with this company.

" The Master—I think so, but I will take this witness' opinion.

" Mr. Chambers—What does it show from 1906 down to date as an average?

" The Master—I do not know yet.

" Mr. Hyatt—It is a very easy way to prove a case, your Honor, in the absence of any particular records.

" Mr. Neumann—We have not a large case here, we have a case where they can prove the facts, and the law requires they must prove them beyond a reasonable doubt. This is an important issue in the case, the unaccounted for gas.

" The Master—I know it. I understand how important it is, and that is why I welcome the testimony of a sworn witness, who swears that 10 per cent. is or is not reasonable, so that you can cross-examine him and show that he is wrong about it. I would rather rely on that than on the books.

" Mr. Hyatt—I would rather find out the extent of his knowledge.

" The Master—You will have plenty of time for that.

" Mr. Chambers—Exception.

" By the Master:

" Q. Is it or is it not a reasonable loss?

" A. A reasonable unaccounted for, your Honor.

"Q. You think it is?
"A. I do.
"Mr. Hyatt—The witness in the Consolidated case said it was otherwise."

(R. 408-9 [443-5].)

On being cross-examined as to the percentage of gas last, Woods testified as follows:

"Q. Now, you would not be surprised, would you, if the unaccounted for gas, according to the company's own statement for 1917, was 7.96 per thousand cubic feet?

"The Master—For what year?
"Mr. Chambers—1917.

"A. I should say that if that is the record—I don't recall what it is—it has probably gone from 8 to 16 or 17 per cent.
"Q. There is 7.96 for 1917, and 8.07 for 1918?
"A. Well, the weather conditions would have something to do with that. If you will refer to previous years you will find it is higher, and for 1919 it was more than ten per cent."

(439-40 [496].)

The amount of unaccounted for gas in 1917-1918, respectively 7.96 per cent. and 8.07 per cent. would appear to be more convincing evidence of the fair amount than the abnormal year 1919. The average of the two years is 8.015 per cent. An allowance of 8 per cent. is sufficient for the purpose, in our opinion. In this connection, we refer to the opinion of Judge Hand, in the Consolidated Gas Company case, that in Manhattan the fair amount of unaccounted-for gas should not exceed 4.1 per cent. In that case, the Master, who was the same as in the instant case, found:

> "after listening to the testimony given by Mr. Woods and by the defendant's expert, Mr. Little, and after analyzing the various reports of the various companies and the experiences of the various companies, and the explanations of Mr. Woods and the statements of Mr. Little with reference to it in this and other cases, I am convinced that 7 per cent. of the gas made must be figured as unaccounted for gas."

Judge Hand disagreed with the Master in that case and fixed the percentage at 4.1. In the instant case, Judge Mayer also disagreed with the Master. He said:

> "This percentage varies. Some years it may be more, others less. Therefore, the estimate of an expert like Mr. Woods is valuable. This plant, in his opinion, should show a loss of about ten per cent. and I accept that figure, for the purpose of this case, instead of 11.03 per cent."

(R. 111.)

We do not believe this Court will allow such an excessive amount on the mere expression of an expert. The year 1919 being abnormal, the book records should not be taken even if proper proof had been submitted on the matter of gas made and gas sold. No injustice will be done to respondent if the percentage of unaccounted-for gas is fixed by this Court at the average of the years 1917, 1918, or just a shade over 8 per cent., which is nearly double the percentage found to be reasonable by Judge Hand in the Consolidated Gas case. The expense beyond the holder, commonly referred to as "Distribution Cost" was not properly proven by respondent. The Court below disallowed:

(a) Defensive Emergency Service.
(b) Expenses of Litigation.

(c) Interest on Unpaid Taxes.
(d) Federal Tax on Bondholders' Income.
(e) Income from Insurance Participation.

In this way, the book costs were reduced from 42.07 cents per thousand feet to 37.14 cents. We contend that "Uncollectible bills" should not be figured as an operating expense where a company, as here, is allowed to collect in advance from its consumers a sum equal to two months consumption of gas. This item appears as an expense amounting to $.0040 per thousand cubic feet (R. 1572). Interest on consumers' deposits should likewise be disallowed. The respondent collects that money and can do what it pleases with it. If placed out at interest the return would be equal to the amount that respondent figures it has to pay to the consumers in the form of interest. The amount of this expense is equivalent to $.0048 per thousand cubic feet.

Summing up our contentions on this matter of operating expense and taxes, we set up the following table.

TABLE I.

Summary of Adjustments to Operating Cost.

Brief p. No.	Item	Cost per M ft.	Total Saving
46	Cost of hauling coal.....	$0.02825	$9,498.82
46	Generator coal	.00630	2,118.32
47	Boiler coal	.02750	9,246.64
67	Gas oil	.00830	2,790.80
90	Gas-production labor	.01487	5,000.00
92	Repairs	.04342	14,600.00
91	Uncollectible	.00400	1,344.97
97	Interest on deposits.....	.00480	1,613.96
97	Deduction by Court.....	.04930	16,576.70
	Total of reasonable savings	$0.18674	$62,790.21

Master's findings (No. 48) (R. 44).

"Net loss from gas business..... $9,074.70"
Possible savings, as shown above..... $62,790.21
Loss converted to Profit by taking into consideration reasonable operating expense in a fairly well-designed water gas plant, year 1919..... $53,715.51

II.

This company has had the benefit of a fair average return within the meaning of the statute governing public utilities in the state of New York and a fair average return more than sufficient to overcome any claim of confiscation.

In *Municipal Gas Company* v. *Public Service Commission*, 225 N. Y., 89, 98, 99, Judge Cardozo** stated:

> "For more than nine years, the statutory rate was adequate. Abnormal conditons brought about a change, and now, when the return is figured upon the value of the property, the outcome is said to be a deficit. The defendants argue that courts must pay some heed to the average results; that the prosperity of one year may atone for the adversity of another; and that confiscation does not ensue unless there has been an unreasonable extension of the period of dearth. *That dearth does not signify confiscation unless unreasonably prolonged, may be assumed to be true.* (*Darnell* v. *Edwards*, 224 U. S., 564). The difficult thing is to determine where the line is to be drawn. Its location will vary with the nature of the business, the exigencies of the present and the chances of the future. There is no other test than the rule of reason and fairness (*Cedar Rapids Gas L. Co.* v. *City of Cedar Rapids*, 223 U. S., 655, 669). One cannot crowd the governing principle into any formula more definite. It will seldom be important that rates have been inadequate for a

day or a week or a month. *Fleeting losses may be suffered and yet the balance sheet may show a profit.* Prolong the losses, however, for a year, and you may reach and cross the danger line. It is by the average of the year that business commonly reckons its losses and its gains. *On the other hand, there may be times when the average must be distributed over periods still longer. We make no attempt to solve these problems now. We cannot solve them fairly until all the evidence is in. Then only can the changes and chances of the business be probed and measured.* The case is here upon demurrer. The only question to be determined is the adequacy of a plea. * * *

"We have allegations that the bounds of moderation have been passed; that confiscation has resulted and will indefinitely continue. Unexplained and undenied, these allegations made out a *prima facie* case of the denial of a just return. It may, of course, be impossible to prove them. The deficit when analyzed may be dissolved. The apprehension of evil may be the vain forebodings of timidity. The conditions engendered by the war may linger for months or years, or may vanish with the coming peace. Those questions are for the trial." (Italics are ours.)

The picturesque and comprehensive language above set forth meets with the line of decisions handed down by this court and is in consonance with the very character of the subject matter involved. Specific reference is made to the following considerations:

(1) That reference must be had to the nature of the business.

(2) The exigencies of the present must be taken into account.

(3) The chances of the future must be considered.

As for the chances of the future, Judge Cardozo takes into account the possibility of reconstruction as affecting alleged confiscatory rates by referring to the fact that conditions of abnormality might "linger for months or years or may vanish with the coming peace."

The summary, however, seems not to have included what must necessarily, of course, be taken into account; namely, the past.

In *Omaha & C. B. S. R. Co.*, vs. *Nebraska State R. Comm.*, the Nebraska Supreme Court, through Cornish J., said (P. U. R., 1919, F), p. 308, at p. 309:

> "The purpose of the law being to allow those who voluntarily furnish the necessary capital to install and operate such public utilities, a fair average return upon the value of the property so devoted to the public use, and to prevent unreasonable profits, in fixing the rate at any particular time, *former earnings and probable prospective earnings should always be considered with a view to so adjust the rate as to prevent extortion and allow such fair average return.*"

In *Darnell* v. *Edwards*, 244, U. S. 564, the question of the confiscatory character of rates fixed by a Commission was involved and the period of condition was about a year and a half. The Court, at page 569, stated:

> "The evidence for complainant tending to show they were non-remunerative while based upon actual experience in the operation of the road, yet relates to only a brief period when conditions were abnormal."

And further, the Court said:

> "But it is sufficient for the present to say that the experimental period was too brief

> * * * and conditions during the entire period covered by the *testimony have been too abnormal to enable us to say that the Commission's rates are confiscatory.*"

As to what constitutes confiscation must depend upon the facts in each case. If a public utility corporation has been prosperous for a long series of years, but during the war, or immediately thereafter and as a result of an upheaval that was world-wide in its effect, earned a reduced return for a period of one year, and, as claimed, a slight deficit for a period of four months, it cannot claim the rate fixed by the Legislature is confiscatory. Particularly is this so where the period was extremely abnormal and where it was followed by a gradual and fairly rapid decline in the level of prices.

As previously pointed out, Judge Cardozo's statement of considerations which must be taken into account in determining whether a rate is confiscatory, refers only incidently to past earnings and does not attempt to show just how they must be treated. He does, however, make the point that past returns are a factor, but the issue before him did not require a detailed analysis of the extent that they enter into the constitutionality of an existing rate.

The relation of past earnings to the constitutionality of an existing rate fixed by statute has never received a final judicial determination because it has never come as a direct issue before the courts. The point when made, as by Judge Cardozo, has always been merely incidental, indicating only that the Court realized that the issue existed, but not determining it because it was a minor matter and did not affect the particular decision.

In the present case, however, the appellants urged, and have urged throughout the trial before the Master, that *in passing on the question of confiscation, complete account must be taken, not only of the present earnings and future prospects of operation, but of the past earnings and returns realized under the rate fixed by statute.*

Evidence was presented before the Master, by the appellants, showing clearly that the respondent has received during the continuance of the rates fixed by statute, more than a fair return on its investment in the property used in public service. For many years under the statutory rate it realized excessive returns, which under proper financial management should have been reserved against the time when the revenues temporarily might not be sufficient to bring a full return. These earlier excesses must be considered as an accumulation of surplus or reserve for an equalization fund to provide *a fair average return* to the investors. The intent of the legislation was that the excesses of prosperous years should be used for deficiencies of poor years.

Facts as to prior earnings were offered in evidence by appellants to show that respondent earned more than a fair return since its organization and that there was no ground for setting aside the statute. The Master, however, refused to consider the relevancy of these facts, and based his decision altogether upon the alleged financial condition during the year 1919. By ignoring the facts as to earlier earnings he held, in effect, that the company is entitled constantly, each year taken by itself, to earn a full return on the investment, and that whenever in any year the rate fails to bring such a full return, it becomes confiscatory and in-

operative; also that excessive earnings during any period become the absolute property of the investors.

Appellants urge upon the Court that this view is erroneous, and that the Master should have taken complete account of respondent's earnings during the time the legislative rate has been in effect. It is this error, particularly, that renders the Master's opinion and findings unsound, and if it were sustained would place a gross injustice upon the gas consumers.

When the Legislature first fixed the rate for gas in 1906, by that very act it announced a new public policy in regard to the future gas supply furnished by respondent and other companies in New York City. Theretofore, respondent had been free, except as to the common law requirement of reasonable rates and fair service, to charge such rates as it deemed expedient. It had been substantially free *to charge what the traffic* would bear, without any attempt at public regulation or restriction. In 1906, however, the Legislature definitely exercised the right which had been recognized under the police power for many years, to fix definitely a rate which for the future should stand as a maximum. This was exercised for the general public welfare and was subject only to the limitation that it could not confiscate private property for such public purpose and thus required the allowance of a fair return on the investment.

But within the limits of this general constitutional restriction that a fair return must be allowed on the investment at the time this direct rate fixation was put into effect, the Legislature was free to determine the policy to be pursued for the future in reference to gas rates. By fixing the rates in

1906, therefore, the Legislature virtually made the direct announcement that this would be the maximum rate, unless it came clearly to be confiscatory. Further, this announcement carried the clear implication that the company would be entitled to earn only a fair return on its investment and no more, if the question were to arise whether the rate so fixed was confiscatory.

This announcement of new policy in 1906, when the Legislature fixed the rate by statute, was subsequently reinforced in 1907 by the enactment of the Public Service Commissions Law, by which the Commission was directed in fixing reasonable rates to have due regard to *a fair average return on actual investment* in property used for the public service, and to make due allowance for surplus and contingencies. The clear purpose of this provision, which corresponds with common sense and the practical necessities of rate regulation, was that rates should be fixed from the standpoint of a long term policy; that there should be certainty and stability, and no change unless it could not be reasonably avoided. The plain intent, therefore, if the Acts of 1906 and 1907 are considered together, was that the gas rate fixed by statute should continue as a maximum so long as it remained constitutionally valid. The Commission had full power to reduce the rates when there were excessive earnings, but not to raise them. But it also had the right for the purpose of maintaining stability to leave the rate in force even if there were excessive earnings, with the view that the excesses should be accumulated as surplus under the terms of the statute, to be employed as an equalization fund during periods of inadequate earnings or loss. Respondent, therefore, is entitled

to a fair average return on its investment and no more, and was in duty bound to conserve the greater earnings of "fat" years for the "lean." It is not entitled to an increase in rates when "lean" years appear until the previous excesses or surplus have been consumed.

As the record shows, under the rates fixed by the statute, respondent realized excessive earnings for many years, and the Commission might properly have reduced the rates, but did not do so under its discretion. It thus conserved the excesses as an accumulation of surplus to maintain a constant and stable rate. Under this policy, therefore, the excessive returns of the earlier years must be set up against the deficiencies of the limited period of extraordinary business conditions due to the war. The Master's view, therefore, is manifestly unsound, i.e.,—that since the Commission did not reduce the rates when there were excessive earnings, these became the absolute property of the company, and thereafter it would still be entitled to earn a full return each year and could demand an increase in rates whenever the prospect of deficiencies appeared. This view would render nonsensical the terms of the statute providing for a fair average return on actual investment and requiring the Commission to have consideration for a surplus and contingencies in fixing a reasonable rate. Respondent did, in fact, set up a contingency fund as is hereafter shown, and it was not drawn upon during the aforesaid abnormal period.

Unless the purpose of the Acts was to apply excessive earnings of prosperous years against deficiencies of poorer periods, why did the statute prescribe the duty of allowing a fair average return on actual investment and providing for a surplus and contingencies? Why should there be provision

for surplus and contingencies, unless, in providing for a fair average return, such allowances are to be used when and if needed in the payment of reasonable return when the earnings were insufficient? Could the Legislature have had an idea that a surplus accumulated through excessive earnings should ever be conveyed as an outright gift to the company? Does the statute make sense, unless it is clearly recognized that under any rate the investors are entitled only to a fair average return, and that any excessive earnings for a period are to be accumulated against any subsequent deficiencies.

In the present case, the accumulation of earnings continued for many years. The Commission simply exercised its legal discretion to permit an accumulation rather than to reduce the rates. There is no precise point where a further accumulation must cease and where a consequent reduction in rates must be effected. This is a matter of reason to be exercised under the discretion of the Commission.

Under this long standing policy, therefore, of maintaining the statutory rate in spite of excessive earnings, the rate should be continued until all the previous excesses have been consumed; or even longer unless without any doubt as to the facts the further requirements of service and the equitable treatment of the investors would necessitate an annulment of the rate. But the following statement, which is based upon data in the record, shows that there is still a large balance of unconsumed excessive returns applicable to future deficiencies. The statement presents the amount of a fair return for each year since 1906, the return actually realized under the statutory rate, the excessive return or deficiencies, and the total accumulative excessive return:

TABLE II.

RETURN ON RATE BASE.

Aug. 1st, 1905—Dec. 31st, 1918.

Year Ended.	Operating Income, Plus Book Deprec., Exh. No. 12.	M. Cubic Ft. Gas Sold.	*Depreciation Allowance at 3c. Per M. Cu. Ft.	Adjusted Operating Income.	Rate Base as Shown in Brief of Newton.	6% Return on Rate Base.	Excess or (Deficit) Over Operating Exp., Taxes, Deprec., & 6%.	Per Cent. Return on Rate Base.
July 31st, 1906	$48,955.93	90,477.5	$2,714.32	$46,241.61	$402,711.00	$24,162.66	$22,078.95	11.48

							$341,297.26	

*Depreciation has been figured consistently at 3c. per M. Cubic Ft. of gas sold. This is the rate at which respondent set aside sums to meet renewals and replacements beginning in the year 1915. That estimate of 3c. exceeds the amount required to meet renewals and replacements as shown by the record.

Note—We have not deducted anything from the book figures of operating expense, not even the Federal Income Tax and Tax on bondholders' income, nor have we taken into account that operating costs were above the reasonable requirement.

From August 1, 1905, to December 31, 1918, based upon the figures in Table II, respondent had thus realized a total of excessive return, under the statutory rate, amounting to $311,297.26. This excess return should be treated as a prior contribution by the consumers, it being a credit balance to cover temporary annual deficiencies in earnings during abnormal periods. Before the statutory rate, therefore, can be pronounced confiscatory, this entire sum ought first to be wiped out by actual deficiencies, and there is now no prospect that any such amount will be required, in view of the rapidly declining cost of operation, of which this Court can take judicial notice.

While respondent cannot claim that the rate is confiscatory so long as there remains an unconsumed balance of previous excessive earnings, the statutory rate might well be continued for a considerable time, even if all such excesses had been consumed and outright deficits were about to be incurred, provided that there are reasonable prospects of meeting such temporary deficiencies by future earnings and returns.

If the Master's view were to prevail, that the validity of the statutory rate must be judged on the basis of one year, or at most only sixteen months, the reasonable discretion of rate regulation would be unduly restricted. The Court or the Public Service Commission would be bound, under such conditions, to make a new analysis of rates each year, increasing or reducing them according to the costs of the moment, although the changes in expenses might be accidental or temporary, and sound policy would require a stable rate, in spite of the fluctuation in costs. The New York law, therefore, had a purpose not comprehended by the Master,

namely, to provide for the maximum stability in rates, to be maintained with reason.

Further, if the Master's view were sustained, the excessive returns paid by the consumers during prosperous years would be paid over to respondent as its own property. Although they were paid for the purpose of furnishing a fair average return *and to provide a surplus for any temporary deficiencies*, they would be diverted from the latter purpose and the rates would be raised to meet temporary deficiencies. Such a procedure would be rankly unjust to the consumers, requiring them, first, to furnish a surplus to meet possible deficiencies and, second, compelling them to meet the temporary deficiencies by contributing higher rates.

The period selected by Respondent in its Bill of Complaint, 1904 to 1918, inclusive, should be considered in ascertaining if a fair average return has been had on the investment in the property.

The Master stated in his opinion (R. 48 [79½]):

> "If, therefore, the actual results of operations for the year 1919 show the rate to be confiscatory, it follows that the net result of operations for the year 1920, which can only be determined in definite figures when the year has ended and the books for 1920 have been closed, will show a larger deficiency than appeared as the result of operations in the year 1919. *I have therefore concluded to base my findings as to the cost of making and distributing gas especially upon the operations and costs established for the year* 1919, those figures being taken, of course, in the light of what I have just said, that the cost of making and distributing gas in the year 1920 will be in excess of

the figures which I reach for the year 1919." (Italics ours.)

In its bill of complaint, respondent claims (XVI) that "the maximum price of one dollar ($1.00) per thousand cubic feet for gas, fixed by the said Act of 1906, has been, is, and will continue to be wholly inadequate, in that it does not permit your orator to earn a reasonable return upon the fair value of its property devoted to the public use." Furthermore, it specifically claims (XIV) that during no year since its organization, in 1904, have the earnings been sufficient to provide a return of as much as six per cent. upon the reasonable value of its property; although in paragraph IX thereof it alleges that "since its organization in 1904, it has managed the business prudently but has paid no dividends to its stockholders, has devoted to the development and expansion of the business certain income which might have been used for dividends."

Respondent did not offer a scrap of evidence in support of its claim that the statute has been confiscatory since the organization of the company in 1904. It was practically directed by the Master to confine its testimony to 1919, as appears from the Record:

> "The Master—That cross-examination is not at all helpful, I believe, to the determination of this issue. I have got to know what gas oil, in the quantities required by the New York & Queens, could have been bought for in 1919, and what happened in 1912 or 1914, or some other year does not help us.
>
> "Mr. Chambers—We don't agree with you at all about that, and we want to have you take the proof as to other times.
>
> The Master—That does not interest me at all, whether you agree with me or not.

Mr. Chambers—It does the defendants and it may the other court.

"The Master—I am going to direct this trial. I am simply indicating to counsel now what I think is useful to the Master in determining the issues in this case. I am going to sustain objections to any line of inquiry that does not bear upon that situation.

"Mr. Ransom—I have no objection to his stating what the change in price was between——

"The Master—Well, I have. I am not going to lumber up this record——

"Mr. Chambers—The claim in the bill of complaint that they have not enjoyed a fair return since 1906.

"The Master—I don't care what they say.

"Mr. Chambers—The same issue is raised in the Consolidated——

"The Master—I don't care what they say in their bill. The question is what, by actual experience, beginning January 1, 1919, is the result to this company at a price limited, as I understand it, to one dollar. I have got to know what it cost to make gas in 1919 and 1920, and as one of the elements I have to know what oil should have cost the New York & Queens during that period. I don't care what happened years ago.

"Mr. Deegan—You are going to limit your inquiry to the period subsequent to January 1, 1919?

"The Master—Yes."

(R. 354 [349-50].)

Considering all the circumstances surrounding the statutes and the showing in the record that respondent has enjoyed more than a fair average return upon the capital actually employed, appellants respectfully submit that the judgment of the lower court should be reversed.

III.

For the purpose of making a fair test of the statute, the period selected by the Master is altogether abnormal.

Under any circumstances, one year's operations form no true criterion of the reasonableness of legislation establishing rates for public utility service; but when we find that the year under consideration in this case was in almost every respect abnormal, it becomes manifestly unfair to use that short and unprecedented period as the basis for declaring confiscatory a statute that was held to be constitutional by this Court in 1909. Judicial notice may be taken of the fact that the year 1919 was abnormal, but it is perhaps advisable to prove by the record that the year was one of unprecedentedly high prices; labor conditions were subnormal so far as concerns the number of men available, and abnormal as to the rates paid. The following quotations from the record are very much in point:

> "Q. What is the situation? You cannot get anthracite coal under contract at all just now?
>
> "A. No, sir; we cannot. They are not prepared on account of the situation in the mining region on wages; it has not been settled, and no one is prepared to make a price, a definite price for next year, with the exception, I think, of one where we have an offer of 10,000 tons of coal—well, even that is not definite, because that is subject to increase in miners' wages, so there is really no definite price.
>
> "Q. How long has that condition existed

that you have not been able to get a contract?

"A. We have not been able to get quotations prior to the 1st of April. The coal contract year is from April 1st.

"Q. In other words, up to April 1st you had some coal contracts that were running out?

"A. Yes, sir.

"Q. But beginning April 1st you were not able to make any coal contracts at all?

"A. No, sir. And in order to keep running we have been running into our stock of coal which we had on hand. During the month of April, for instance, we have received about 5,000 tons of anthracite coal, and during that period of time our stock of anthracite coal in our various plants has decreased about 30,000 tons.

"Q. Where does the New York & Queens get its anthracite coal from?

"A. The New York & Queens had some stock of coal on hand in the same way as the other plants, and we have a surplus stock of coal at Astoria which is available for the New York & Queens in case of necessity."

(R. 333 [311-2].)

"Q. And you do not know anything about the sources of supply of coal, do you; you have not made any study of that?

"A. Yes, I have been down in the mines.

"Q. You do not want this Court to understand that that is running out, too, do you?

"A. The coal is not running out, but the ability to get it is very difficult at the present time.

"Q. We are in unusual times, then, I take it?

"A. Yes, so far as the strikes are concerned; as they occur they are unusual at the moment.

"Q. So far as everything is concerned, isn't that so?

"A. Well, it is very difficult to get any de-

livery of first class—we are speaking of anthracite coal, I assume?

"Q. Yes.

"A. In the first place the labor situation in the mines is not settled; in the next place the strike on the railroad is retarding the delivery of the coal, and in the next place the strike of the harbor tugs of the railroad is making it so that they do not deliver any coal. I believe they delivered one boat yesterday, the first one in, I guess, thirty or forty days. We are compelled to get outside tugs to go down and bring coal up from the terminals, which ordinarily would be delivered by the railroad.

"Q. Labor is on the warpath, would you say?

"A. Well, I think labor is unsettled. I do not know that it is on the warpath.

"Q. You would say that the times are abnormal now?

"A. The labor situation is very much disturbed, there is no question about that.

"Q. You do not want to use the word "abnormal?"

A. Well, I went through a similar experience in 1902 and 1903 with respect to coal, which was practically identical in that time, and other companies had to—I did not in my case, because I got frightened in time to fill up all my coal sheds with coal, and I got through that time without going abroad for coal, but other companies had to go abroad for coal.

"Q. You looked ahead a little bit at that time?

"A. Looked ahead at that time? Yes, I looked ahead at that time.

"Q. And you bridged over the gap?

"A. In that particular case of the Boston Company I succeeded in bridging that over.

"Q. Now, would you not say that conditions were abnormal all around?

"Mr. Ransom—I object to that as vague in meaning and indefinite. What does he mean by abnormal, the attitude of the Attorney General, or what?

"The Master—I will let Mr. Addicks say.

"Mr. Chambers—No, I refer to the Consolidated Company.

"The Master—I did not ask you to refer to anything; I have ruled on it.

"Mr. Chambers—Well, I have the attorney in mind, for one thing.

"A. I do not know of any time in my experience where it was so difficult to get coal, either hard or soft, and either coal or gas oil, and that situation being more acute than I have ever seen it, I should call that abnormal. As to when it is going to straighten out, why, everything is very uncertain.

"Mr. Hyatt—You are only testifying for yourself, are you not, Mr. Addicks, you do not mean to testify for others?

"Mr. Ransom—I object to the interruption by this self-constituted representative of the District Attorney.

"The Master—Objection sustained.

Mr. Hyatt—Exception.

"Q. You would not say that was so only as to coal, you do not have that in mind; that condition prevails generally, does it not?

"A. I think the same thing applies to oil.

"Q. Does it apply to labor and materials that you use?

"A. Labor is very, very uncertain.

"Q. It applies to everything, does it not—food and everything else?

"Mr. Ransom—What applies?

"Mr. Chambers—This abnormal and uncertain period.

"Mr. Ransom—There is nothing abnormal about it.

"A. I think there is a great deal of unrest with labor, a great deal of uncertainty. No

one knows what the rate of pay of a man is going to be from one day to another.

"Q. If you were writing some friend of yours, and if you were discussing the times, would you not say that the times were abnormal all around?

"Mr. Ransom—Objected to as an effort to make the case ridiculous.

"Mr. Chambers—Leaving out counsel for the complainant.

"Mr. Ransom—It is not a form of question that will look intelligible on any record.

"The Master—I will allow it, anyhow.

"A. I shall have to ask you to repeat it.

"Q. (Repeated by the stenographer.)

"Mr. Ransom—I object on the further ground that it is calculated to bring the constitutional law officer of the State into contempt.

"The Master—Objection overruled.

"A. I think I should be very apt to express myself as I have just expressed myself. I do not know how I could do it more completely."

(R. 372-4 [380-3].)

"Q. How much was that a year ago, say, or two years ago, that cost?

"A. I don't know. I can recall some three or four or five years ago, it was I think fifty cents.

"Q. In place of what, a dollar and a quarter?

"A. Yes. That is just an illustration, Mr. Chambers, of how things have gone up all along the line.

"Q. Well, things are abnormal. That proves it, doesn't it?

"A. Well, is it a question of what may be considered abnormal. It looks now as if we had normal conditions, unless it goes higher.

"Q. Suppose it goes lower?

"A. If it goes lower, it will be lower.

"Q. Well, it is an unusual situation, isn't it?

"A. Well, the situation has been unusual for the last three or four years; based upon three or four years ago it is very unusual, from 1914, but whether you call it an unusual situation now is another proposition because it has become a usual condition with us."

(R. 433 [485]).

"A. There were no contracts made during that period, because the Government had charge of the coal supply.

"The Master—Because who had charge of the coal supply?

"The Witness—The Government.

"Mr. Neumann—One moment. I move to strike out that part of the witness' answer 'because the Government had control of the coal supply.

"The Master—Motion denied.

"Mr. Neumann—Exception.

"Q. By the Government, you mean the United States Fuel Adminstration?

"A. I do.

"Mr. Neumann—Same objection.

"The Master—Same ruling.

"Mr. Neuman—Exception.

"Q. So that coal secured by the New York & Queens Gas Company during January, February and March of 1919 was not pursuant to any contracts with the coal companies?

"Mr. Neumann—Objected to on the ground it is incompetent, irrelevant and immaterial, and nothing yet shown with reference to the New York & Queens, no foundation laid for it.

"The Master—Overruled.

"Mr. Neumann—Exception.

"Mr. Tobin—I ask, if the Master please, the

date—I cannot just recall the date that Mr. Gawtry left the company.

"The Master—March 1, 1920.

"A. What was the question?

(Question repeated by the stenographer.)

"A. That is correct.

"Q. Did you ordinarily purchase your coal through jobbers or deal directly with the coal companies?

"Mr. Neumann—That is objected to on the ground it is incompetent, irrelevant and immaterial, and not the proper way of proving a custom or practice.

"The Master—Overruled.

"Mr. Neumann—Exception.

"A. Direct from the coal companies, the parent companies.

"Q. That is, as wholesalers?

"A. As wholesalers.

"Mr. Neumann—I move to strike that answer out, because I do not think that means anything, 'wholesalers.'

"The Master—Motion denied.

"Mr. Neumann—Exception.

"Mr. Tobin—Exception.

"Q. During the coal year beginning April 1, 1919, were you in fact able to get all the coal that you required from producers?

"Mr. Neumann—That is objected to on the ground that it is incompetent, irrelevant and immaterial, and not the proper way of proving it. It is a conclusion of this witness. He may state what he did, and from that the Master must determine whether they were able to get coal or not.

"The Master—I think there is a good deal of force in that objection. I will sustain it.

"Mr. Ransom—It is your feeling that the question calls for a conclusion?

"The Master—Yes.

119

"Q. During that coal year what did you do to get coal?

"A. We tried in every possible way. We had to go to Washington frequently, to Philadelphia, to the railroad officials of the different roads on which coal is shipped, to the Coal Administration, Mr. Garfield—every possible way.

"Mr. Neumann—I move to strike from that answer the words 'possible way.'

"The Master—Overruled.

"Mr. Neumann—Exception.

"Q. Mr. Garfield was the director of the United States Fuel Administration during that time?

"A. He was.

"Q. Did you get all your coal from producers, or did you have to get it from other sources?

"Mr. Neumann—Objected to on the ground it is incompetent, irrelevant and immaterial, vague and indefinite.

"The Master—Overruled.

"Mr. Neumann—Exception.

"A. We got most of it from producers; we got some from brokers.

"Q. During the coal year beginning April 1, 1918, were the prices for anthracite coal fixed by agreement between yourselves and coal companies, or were they fixed otherwise?

"Mr. Neumann—That is objected to on the ground it is incompetent, irrelevant and immaterial, and not the proper way of proving it.

"The Master—Overruled.

"Mr. Neumann—Exception.

"A. 1918 that is?

"Q. Yes, during the coal year beginning April, 1918?

"A. Fixed by the United States Government.

"Q. The Fuel Administration?
"A. The Fuel Administration.
"Q. Were railroad and other charges likewise fixed by the Government?

"Mr. Neumann—Same objection.
"The Master—Overruled.
"Mr. Neumann—Exception.

"A. They were.

"Mr. Neumann—If the Court pleases, if the Government fixed these prices there must have been some order of some kind, and that would be the best proof of it.
"The Master—Yes, but this proof is good enough.
"Mr. Neumann—I except, your Honor."

(R. 527-9 [645-8].)

"Now, Mr. Gawtry, within the last few months there have been strikes at the coal mines, have there not?
"Mr. Ransom—I object to the question unless limited to anthracite.
"The Master—Objection overruled.
"A. Not that I know of.
"Well, for how far a period back do you recall a strike at the mines.
"A. Anthracite mines, you refer to?
"Q. Yes.
"A. Some period; there has been a cessation of work.
"Q. Well, there has been a cessation of work only.
"A. (Interrupting) Prior to the 1st of April.
"Q. Prior to April 1, 1920?
"A. Right.
"Q. How far back did that run?
"A. Just about the 1st of April, that is when their agreement ran out, the last day or so, about the end of March they ceased and did not work in the early part of April and the

last few days at the end of March and the 1st of April.

"Q. Are they working now?

"A. To a certain extent.

"Q. But not to their capacity?

"A. No.

"Q. At the present time there is considerable railroad congestion, is there not?

"A. Yes.

"Q. You read the announcement about the railroads asking the Government to take control again and issue priority orders?

"A. I have.

"Q. And both of those conditions would tend to affect the price of coal, wouldn't they?

"A. They would."

(R. 548 [680].)

"By the Master:

"Q. Do you carry anybody on that payroll that is not actually employed?

"A. Absolutely not.

"Q. Do you carry any amount in there that is not actually paid?

"A. No, sir.

"Q. Do you carry any man that you don't need?

"A. We can't get all we need."

(R. 599-600 [848-9].)

"The Master—How about coal? Would you say it was poorer today than it was two or three years ago?

"The Witness—No, because during the war period we got some cargoes that were very poor. We even had to go to the Shipping Board to get some coal, and some of it was awful. It is hard to form a comparison.

"Q. On the coal you cannot say, but on the oil you are satisfied that it is not running quite so good. Can you give us any degree

of less quality in 1920 as against 1917 or 1916?

"A. No, I cannot.

"Q. You have not formed any judgment on that?

"A. No.

(R. 639-40 [914].)

"The Witness—There are conditions which sometimes turn up in a small works like ours, where we have trouble in getting labor. I have seen conditions there when Mr. Morrison has had to go in and make gas because the gas-maker has not shown up in the morning, and we were short of help. If that condition existed around the first of the month, he would not take his inventory."

(R. 683 [988].)

"Q. What factors do you take into consideration when you give such an order?

"A. I get the works report about the second or third of the month; I go over those figures and then I go back over several days' use of coal for the previous month, and estimate about how long the coal on hand will last, and if we have plenty of room and coal is coming in easy, I order more, so as to keep our bins pretty well filled. Sometimes I have to get down pretty low on coal, because it is pretty hard to get at times.

"Q. When do you find coal harder to get, in the summer or in the winter?

"A. In the winter time, where there is much ice in Flushing Creek and Flushing Bay.

"Q. No, I am talking about from the company, irrespective of climatic conditions.

"A. I would say right now it is the hardest time I have ever known to get coal."

(R. 684 [991].)

"Q. Yes, you testified you had storage capacity for 2,000 tons.

"A. Yes, that is only three barges.

"Q. Yes, that would be three barges; assuming your pile went down to 300 tons you could order two barges and have them delivered, could you not; there would be no obstacle in the way of that, would there?

"A. Well, the only obstacle would be the impossibility of getting it.

"Q. Impossibility of what?

"A. Of coal getting into tidewater. For instance, only last month we would not get any coal from tidewater, and we had to get coal from Astoria to keep going.

"Q. Why?

"A. Because our stock was getting too low.

"Q. Why could you not get it from tidewater?

"A. Because there was none coming in."

(R. 685 [993].)

Public Service Commissions have generally held that the stockholders of public utilities are not to be relieved, or at least wholly relieved, from the losses and burdens resulting from the war or the immediate period of adjustment or reconstruction immediately following.

In re *West Virginia Traction & Electric Co.* (W. V. reported P. U. R. 1919 E. 95) it was held that the increased operating expenses of a utility due to war conditions, should not be transferred to its patrons.

In re *Tri-State Telephone & Telegraph Co.* (P. U. R. 1919 C. 5), it was held that corporations as well as individuals must bear their share of the burdens of the war, and sustain some loss of income without flinching.

In re *Hammond Water Works* (P. U. R. 1919 A. 180), the Indiana Commission refused to base permanent rates upon existing abnormal conditions, because of the impossibility of forecasting

operating expenses and revenues with certainty.

In re *Home Telephone Co.* (Va. P. U. R. 1919 A. 243), it was held that a prosperous utility which has created a large surplus out of earnings, is not entitled to increase its rates on a mere showing of increased cost of operation due to war conditions.

In re *Salt Lake & U. R. Co.* (Utah P. U. R. 1919 C. 565). The Commission declared, in effect, that it would seem to be the part of wisdom to permit utilities to bear temporarily, during the period of reconstruction, such share of the public burden as they can carry without too seriously affecting their financial stability.

In re *Pacific Power & Light Co.*, P. U. R., 1918, at page 670, the Commission said:

> "We are living in unusual times. All are called upon to forego many pre-war privileges and luxuries, and the Commission believes that stockholders of the company should bear a portion of the increased burdens incident to war."

The New Jersey Board of Public Utility Commissioners held (P. U. R., 1918, Vol. E, p. 915):

> "During the war period and in accordance with national and state war policies while in underwriting normal returns for public utilities we should allow rates sufficient to keep the utility solvent and in good operating condition, we must also continue our declared policy of disallowing rates in war times for the purpose of increasing dividends. Stockholders in such corporations must share in the burdens and hardships resulting from financial changes due to the war and cannot expect to wholly escape therefrom."

Similar expressions by Commissions may be found in

(1) The Indiana Public Service Commis-

in "In re Union City Telephone Company, P. U. R., 1918, E., p. 669;

(2) New York Public Service Commission in Long Island Railway Co., 1918, P. U. R. 651;

(3) The Utah Public Service Commission, P. U. R., 1918, B., 497;

(4) The West Virginia Commission in Re Winifrede R. Co., P. U. R., 1918, C, 156;

(5) The California Railroad Commission in Re Northern California Power Co., P. U. R., 1918, C., 394.

The courts before the World War held generally in the same direction:

In *Stevenson* v. *Great Northern Ry. Co.*, 72 N. W. Rep., pp. 713, 721, the Court said:

> "There is no constitutional principle which guarantees the capital invested in railroads, immunity from business vicissitudes to which capital invested in all other enterprises is subject. * * * The courts should take notice of the general depression in business prevailing in 1894."

In *Matthews* v. *Board of Corporation Commissioners*, 106 Fed. Rep., 9, the Court said:

> "It is said however, that the net profits of the good years should be appropriated to make good the losses of the bad years, but it must be remembered that these bad years from 1891 to 1895 were years of panic and general depression. All investments of every character suffered. *The grant of a charter to a railroad company does not guarantee that it will or can make the investment at all times a paying one. A corporation is not entitled as of right and without reference to the necessities of the public to realize a given per cent. on its capital stock* (Turnpike v. Banford, 164 U. S., 578)."

That there has been a recession from the abnormally high prices caused by the Great War, suf-

ficient in extent to justify the denial of applications by public utility corporations for increases in rates, is evident from recent decisions by Public Service Commissions throughout the country.

The Maryland Public Service Commission said:

> "The Commission fully realizes that in view of the numerous reductions in prices which have occurred in the last few months, the time is not opportune for any increase in rates."
>
> Re Consolidated Gas, Elec. Light & Power Co., P. U. R. 1921, A-619.

The Illinois Public Utilities Commission said:

> "It is clear that the inevitable re-action from war prices is already under way in this country *and the signs of financial depression now so prevalent about us cannot be ignored.* While thus far, lighting materials have been practically unaffected by the tendency of lower prices, it must be evident to even the casual investigators that industrial depression must effectively operate to reduce the price of oil, coal and other materials essential to the production of gas, electricity and other utility services. It now is a matter of daily testimony before the commission that labor has increased in efficiency within the past few months.
>
> "Therefore, in order to protect the interests of the utilities, and the consumers of their services, it is important that advances of rates in the face of adverse economic conditions shall be made with circumspection lest undue hardship be worked upon the public."
>
> Re Freeport Gas Co., P. U. R. 1921, A-687.

In a more recent case, the Illinois Public Utilities Commission in re Metropolitan, West Side Elev. R. Co., P. U. R., 1921 B, p. 293 (opinion, January 4, 1921) said:

"Further, it must be manifest that our nation is now upon the threshold of important economic readjustments *which will hasten the return to normal industrial conditions. The trend towards lower prices is too pronounced to be ignored, and its effect may properly be taken into account by us in the instant case as it has been in the recent past.*"

The New York Public Service Commission, Second District, said:

"It is quite apparent now that these prices experienced by this petitioner were abnormal, and also that they were temporary. *The peak has been passed and repairs are already in progress.* It appeared from the evidence of the witnesses called in this case that in the Hudson Valley the price prevailing not long ago for bituminous coal of 89 at the mines shrunk slightly prior to the hearing held in November to 85. This emphasizes the fact which follows, not only from the evidence in this case, but from general conditions known to this Commission, of which we should take notice, that the exceedingly high prices lately experienced are transitory. They form no safe basis for rate making in an attempt to compute a reasonable return for the future. On the other hand, it would be equally unjust to have recourse to pre-war prices or to conditions which formerly maintained in this industry, because there is no reasonable assurance that they would be restored within any short period of time."

Re Kingston Gas & Elec. Co. P. U. R., 1921, B. 76, 82, 83.

As to the meaning, a fair average return, the reports of the public utility commissions abound with decisions to the effect that these words are to be broadly construed in the public interest without damage to the companies.

In re *Queens Borough Gas & E. Co.* (P. U. R., 1918, F. 891).

> "Before the company demands 'emergency' increase in its present rates, *it should 'level off,' average and absorb its excessive earnings and reserves of recent years.* The 'fat' of those past years must serve, in the first instance, to carry it through the 'lean' years of the uncertain present. Sums unwarrantedly taken from operating revenues, and paid out as dividends on over capitalization *or put into property* with only a nominal book entry as 'reserves,' should first be utilized in meeting the charges of the emergency period, before demand is made for higher rates and larger revenues. This company has no right or reason to claim that it is confronted with any real extremity or 'emergency.'"

In re *Jefferson City Light, Heat and Power Co.*, the Missouri Public Service Commission, in P. U. R., 1919, A., at page 722, said:

> "According to Section 82 of the Missouri Public Service Commission law the Commission is empowered to fix maximum rates for electricity, 'with due regard, among other things, to a reasonable *average* return upon capital actually expended.' Italics above are ours. *We construe this to mean an average for a series of years.*
>
> "The evidence in this case fails to demonstrate that an increase in rates is required in order to enable the petitioner to secure a reasonable average return, taking into consideration the earnings during the past four years."

In *Smyth* vs. *Ames*, 169 *U. S.*, at page 546, the Court said:

> "The utmost that any corporation, operating a public highway, can rightfully demand

> at the hands of the Legislature when exerting its general powers, is that it receive, what, *under all the circumstances*, is such compensation for the use of its property as will be just both to it and to the public."

In *Kings County Lighting Co.* vs. *Lewis*, 110 *Misc.*, at page 212, Justice Greenbaum said:

> "It is clear that confiscation may not be predicated upon the operations of the plaintiff for 1916 and 1917. As to the years 1917 and 1918 it must at the outset be said that those years were abnormal, owing to the war conditions then existing."

IV.

Respondent failed to prove the fair present value or the investment in the property devoted to public use.

Ultimately, in every case affecting the rate for public utility service, the question to be determined is: What is a fair and reasonable return upon the fair value of the property employed in rendering service to the public?

In arriving at the present value of this class of property, courts and commissions take into consideration the cost to reproduce, the original cost, the investment, the present value, overhead expense and other elements of intangible value that have been enumerated in the many cases decided by this Court.

In order for the Court to reach its opinion on the fair value of respondent's property, the rate base on which it is entitled to a reasonable return,

it must have before it competent evidence of the original cost of the property; the cost to reproduce it new under normal market conditions; the present condition as compared with the property new; and a record of the operating costs from which it may be determined whether or not the plant is functioning properly and permitting the utility corporation to serve the public at a reasonable cost. A public utility is entitled to ask a fair return upon the value of that which it employs for the public convenience; but, on the other hand, the public is entitled to demand that no more be exacted from it than the services rendered are reasonably worth.

(*Smyth* v. *Ames*, 169 U. S., 466, 18 Sup. Ct., 418; *San Diego Land and Town Co.* v. *National City*, 174 U. S., 739, 19 Sup. Ct., 804; *San Diego Land and Town Co.* v. *Jasper*, 189 U. S., 439, 23 Sup. Ct., 571; *Stanislaus County* v. *San Joaquin and King's River Canal and Irrigation Co.*, 192 U. S., 201, 24 Sup. Ct., 241; *Chicago Union Traction Co.* v. *City of Chicago*, 199 Ill., 579.)

In the bill of complaint, respondent claims that the reasonable value of the property devoted to the gas business as of December 31, 1918, including additions made during the year, is not less than $1,492,976; and that the cost of reproducing the said property during the year 1918 would greatly exceed that amount. In addition, respondent claims that it possesses "going-value" and other intangible assets of great value; and that there existed at that time an aggregate deficiency

in earnings below 7½% upon the value of the said property devoted to the gas business, in the sum of at least $300,858.41, not including compound interest on the deficits at the rate of 6% per annum (R-3).

In the Master's report it is stated:

> "Fortunately, there has been agreement between the parties upon this record as to the cost, up to and as of August 1, 1904, of the tangible properties still in existence and use, which were acquired by the complainant company on that date. The complainant and the defendants agree that the tangible property acquired on August 1, 1904, and still in existence and use, did cost, and as of that date was reasonably worth, at least, $280,108, and I accept that figure in arriving at the complainant's total investment and the present value of its property. Since that date, the net additions to the plant and property of the complainant have cost $850,389.08, and there is no dispute as to this item. These two items not in controversy cover the actual cost of the tangible property now in use, aggregating $1,130,497.08.
>
> "*Additional Elements of the Original Investment.*
>
> "To the first of these items, the complainant asks me, on the basis of Mr. Miller's testimony and the book entries as of 1904 and subsequent years, to add $320,350 for the preliminary organization and development expenses of the enterprise and other items of cost set forth in Mr. Miller's estimate (Complainant's Exhibit 96). It is conceded by the defendants that in the initiating of a gas enterprise there is necessarily incurred preliminary and development expenses, cost of financing, engineering and superintendence expenses, interest and taxes during construction,

and the like as to which varying amounts were testified by the witnesses on each side, principally based upon opinions as to the proper percentages to be allowed for such items. The defendants contend, moreover, that there is no adequate proof before me on which I should base any finding of value for the franchises and rights."

(R-54 [89].)

It will be seen from the above that the Master confuses cost with value because he takes the sum of $280,108, *the agreed upon cost of property installed prior to August* 1, 1904, *and accepts that figure as the present value of said property,* thus ignoring the inevitable depreciation that has accrued since that part of the property was built which existed when respondent took it over in 1904.

We propose to devote several pages of this brief to a discussion of the reproduction cost theory on which respondent relies in setting up what it conceives to be the value of its property on which a fair return should be had. We do not for one moment believe this Court will decide the case on any such theory of value, but we feel compelled to lay the facts in the record before the Court for the reason that the Master failed to deduct from his finding of so-called original cost any sum representing the depreciation that has taken place in this property. He relied upon his opinion that the physical or functional depreciation that exists has been offset by theoretical appreciation. He arrived at his estimate of appreciation by accepting the reproduction cost figures of the expert witness Miller, which figures represent Miller's opinion of the prices that prevailed January 1, 1920.

The attitude of respondent in submitting its case is shown by the following:

"Mr. Ransom—The complainant, as already stated, is offering proof along the lines which it started to do with respect to the value of this property for rate purposes. Judge Mayer has said that, if we expect to offer proof of original cost as a part of our case, we shall furnish it. We do not expect to offer proof of original cost as part of our case any more than we did in the Consolidated Case.

"The Master—Yes, you did in the Consolidated Case.

"Mr. Ransom—We did in rebuttal.

"The Master—What?

"Mr. Ransom—We did in rebuttal.

"Mr. Neumann—Do you think we are going to take the burden of proof?

"The Master—Wait a minute; let us understand this right now, Judge, and we will not be misled. If you rest your case here, without any evidence at all as to what you invested in these properties, I will dismiss the complaint.

"Mr. Ransom—I do not think you could.

"The Master—Then I will refuse to take any more proof.

"Mr. Neumann—That is his position.

"Mr. Ransom—If we show, as we shall, that the cost of making and distributing gas alone, without any return on any investment, is substantially more than the statutory rate——

"The Master—I guess that is a complete answer, of course, but if I find there is even four cents——

"Mr. Chambers—They admit 2½ per cent. they make. Have you seen that complaint?

"Mr. Ransom—Well, in 1918.

"The Master—But in the Consolidated Gas

case you had proof that you issued $38,000,000 worth of capital for property. That you got right away, the first thing you got in your case. There was proof, and I said at the start I would hold that to be evidence of some cost to the Consolidated.

"Mr. Ransom—We have even better proof in this case without offering either proof of original cost or proof of reproduction costs, which we will offer.

"Mr. Chambers—They say they are making 2½ per cent.

"Mr. Ransom—Why not be fair? We said in 1918.

"Mr. Chambers—Well, that is the only time you speak of.

"The Master—My only purpose here and in the Consolidated Case was to give you the way my mind is running.

"Mr. Ransom—I am very glad to have it.

"The Master—And you take your chances.

"Mr. Ransom—I shall."

(R-193-194 [76-77].)

Notwithstanding that respondent relied upon its ability to prove that the revenue received fell short of meeting the operating expenses for the year 1919, it offered testimony in an effort to prove the cost of reproducing the property according to an inventory which had applied to the items therein, by the witness Miller, unit prices as of January 1, 1920. (R-252 [176].)

Appellants contend that inasmuch as the complaint was filed April 7, 1919, and the Master made his findings, based upon the result of operations for the year 1919, any evidence of cost to reproduce the property new, as of January, 1920, is not entitled to any consideration.

Appellants further contend that there is no competent evidence before the court as to the actual amount of property owned by the respondent, used

and useful in serving the public. The Master stated (R-255):

> "I am not going to take Mr. Miller's value until I get more proof of what actual property they have on hand."

As to lack of fairness in accepting reproduction cost during the period of abnormal prices, as an indication of the fair value of the property, the Master stated his views during the trial as follows:

> "The Master—I am frank to say in this connection, and in connection with this inventory, that I do not believe the Court ever intended by any statement made in any case to require the consumers of gas to pay a price based upon a theoretical or opinion statement as to the cost of replacing the plant today. Now, it may be that I have got to value the plant as of this time under some of the language of the cases, but having in mind an expression in the decision or opinion of the Supreme Court in the prior Consolidated case, I do not believe the Court ever intended that the consumers should pay for gas based upon the present, and to some extent, in one point of view, an abnormally high price of reproducing this kind of property. I am going to take all this evidence.
>
> "Mr. Neumann—Your Honor means a return based on that valuation?
>
> "The Master—I say a return based on that. It may well be that I have got to make some finding as to present cost of replacing or reproducing, and therefore I am going to take this proof, but I am frank to say I do not believe the Court ever intended to impose any such condition on the consumer."
>
> (R-260 [190].)

The Master's reference to this Court's decision in the "Consolidated Case" was apparently the following:

> "If the property, which legally enters into the consideration of the question of rates, has increased in value since it was acquired, the Company is entitled to the benefit of such increase. This is, at any rate, the general rule. We do not say there may not possibly be an exception to it where the property may have so increased tremendously in value as to render a rate permitting a reasonable return upon such value unjust to the public. How such facts should be treated is not a question now before us, as this case does not present it. We refer to the matter only for the purpose of stating that the decision herein does not prevent an inquiry into the question when, if ever, it should be necessarily be presented."
>
> Wilcox *v.* Consolidated Gas Co., 212 U. S. 52.

The Public Service Commission Law under which respondent operates, provides, Section 72, as follows:

> "In determining the price to be charged for gas or electricity the commission may consider all facts which in its judgment have any bearing upon a proper determination of the question although not set forth in the complaint and not within the allegations contained therein, with due regard among other things to a *reasonable average return* upon capital actually expended and to the necessity of making reservations out of income for surplus and contingencies."

Whitten, a writer on public utility questions, cited with approval by this Court, says, in his "Valuation of Public Service Corporations," Vol. II, page 17,

> "In recent years there has been a tendency to modify the reproduction method so as to bring it nearer to actual cost and to emphasize the importance of the actual necessary cost as a factor in determining value. Certain decisions go so far as to make the actual and necessary cost the most important, if not the controlling, factor in determining fair value."

And at page 827, he says:

> "Any method that is pre-eminently fair to both parties (meaning to the public and the public utility company), must get back to actual capital cost as a base for actual as distinct from nominal profits."

In San Diego Water Co. *v.* City of San Diego, 118 Cal., 556; 50 Pac., 633, 636, 638, the California Supreme Court says:

> "Nor would it, on the other hand, be just to the consumers to require them to pay an enhanced price for the water, on the ground that it would now cost more to construct similar works. Such a contingency may well happen; but to allow an increase of rates for such reason would be to allow the water company to make a profit, not as a reward for its expenditures and services, but for the fortuitous occurrence of a rise in the price of materials or labor. The law does not intend that this business shall be a speculation in which the water company or the consumers shall respectively win or lost upon the casting of a die, or upon the equally unpredictable fluctuations of the markets. For the money which the company has expended for the public benefit, it is to receive a reasonable, and no more than a reasonable, reward. It is to be paid according to what it has done and not according to what others might conceivably do. In effect, the bargain between the company and the public was made when the

works were constructed; and this matter is to be determined according to the state of things at that time. * * *"

In *Brymer* v. *Butler Water Co.*, 179 *Pa.*, 231; 36 *Atl.*, 219, 251, the Pennsylvania Supreme Court says that:

"Ordinarily that is a reasonable charge or system of charges which yields a fair return upon the investment."

And, commenting on the preceding decision, another Pennsylvania judicial tribunal, in *Wilkesbarre* v. *Spring Brook Water Co.*, 4 *Lack.* (*Pa.*) *Leg. News*, 367, 380, says:

"It may be contended that the rule adopted by our Supreme Court is somewhat arbitrary. But we know of no better one. The primary basis of any calculator as to the value of a water plant must be the money actually invested by the owners."

In *Public Utility Commission ex rel. City of Springfield, the Springfield Gas and Electric Company*, 291 *Ill.*, 209, the Illinois Supreme Court says.

"It would be equally as unfair to the consumer to fix the rate at a figure which would produce a reasonable income on a value determined by the cost of reproduction new at a time when cost of construction was abnormally inflated, as it would be unfair to the public utility to compel it to serve the public for a rate that would produce a reasonable income on a value determined by cost of reproduction new at a time when the cost of construction was abnormally low. Therefore it cannot be laid down as a rule without qualifications that cost of reproduction new, less depreciation, is the only basis of valuation for rate-making purposes. It is equally true that

> the original cost of construction, less depreciation, cannot be held to be the only proper basis for determination of valuation for rate-making purposes. As we have pointed out heretofore in this opinion, the weight of authority is that every element having any bearing on the situation must be considered in the investigation and then sound business judgment applied to the determination of a valuation that is fair and just to the consumer and the utility. Each case must be considered in the investigation and then sound business judgment applied to the determination of a valuation that is fair and just to the consumer and the utility. Each case must be considered on its own merits and such result of value arrived at as may be just and right in each case. It is not a matter of formulas, but there must be a reasonable judgment having its basis in a proper consideration of all relevant facts. We consider any value a fair value which fair and reasonable men would say ought to be attached to the property, under all the circumstances of the particular case, for the purpose of measuring a return which the public should pay to the owner."

and, later in the opinion,

> "In rate cases the question in determining the value is not how much has been or can be got out of the property, but how much has been put into it, in order that from that fact it may be determined how much may be reasonably taken out of it in the way of net income."

The fundamental fallacy of using reproduction cost as an evidence of value lies in the fact that it is an endeavor to ascertain an *exchange value* for a property which admittedly has *no exchange value* as a whole. The effort is made by professional witnesses, in giving opinion testimony, to add to-

gether the assumed exchange values of all the individual items of the property and then claim that the resultant figure, which cannot possibly be the exchange value of the property under any conceivable competitive conditions of barter and sale, is, nevertheless, the fair value of the property to a monopoly upon which it is entitled to earn a return such as it could not possibly earn if subjected to the free play of competition.

The greatest weakness in the use of the reproduction cost estimate in determining fair value is to decide upon the price period upon which reproduction cost is to be figured. The witness Miller dodged this difficulty by taking prices as of January 1, 1920. *He takes spot prices of that date although it is clear such prices do not represent the price levels of the next year or two any more than they do of the past year or two.* He does not follow the practice promulgated by many experts who attempt to ascertain price levels over a sufficiently prolonged period in order to determine the normal prices. He ignores the fact that January 1, 1920, was an utterly abnormal time in relation to commodity prices of construction, materials and labor.

It is evident that the estimated reproduction cost of the *identical plant* at prices as of January 1, 1920, necessarily exceeds the exchange value or possible selling price of the existing plant because that plant was built over a long series of years and the existing depreciation must be deducted from such a reproduction cost to make the evidence even remotely available for determining value. In the instant case no witness was called for respondent to show the extent of the accrued depreciation in this very old gas plant, although

Miller gave his opinion as to the amount of money that it would be necessary to spend on the plant to put it in a proper state of repair.

Another weakness of reproduction cost, strikingly evidenced in the testimony of Miller, is that it includes an estimate of the cost of all capital items regardless of whether they were contributed by the investors or by the consumers. For example, although the items of overhead expense, represented in the cost of developing respondent's plant and business, have been carried in operating expenses and were thus paid by the consumers, nevertheless, in reproducing a theoretical plant Miller includes enormous sums representing his opinion as to the value of overhead expenses in his estimate of reproduction cost new. There is not one scrap of evidence to show that his estimates of theoretical overhead expenses represent a value contributed by and owned by the investor.

Still another objection to theoretical reproduction cost is that in itself it has no relationship to actuality. It is based on the assumption of conditions that do not exist and never can exist. The result of utilizing it is to give the same exchange value to a losing and inefficient plant as would be given to a profitable and efficient plant. No such value is recognized by economists or practical business men, and no such value can exist unless it is artificially created by governmental bodies authorizing rates to be charged upon this fictitious basis of valuing the property.

Miller's reproducing cost estimate is subject to the criticism expressed by this court in the Minnesota rate cases in the following language:

> "Moreover it is manifest that an attempt to estimate what would be the actual cost of

acquiring the right of way if the railroad were not there is to indulge in mere speculation. The railroad has long been established; to it have been linked the activities of agriculture, industry and trade; communities have long been dependent on its service and their growth and development have been conditioned on the facilities it has provided. The uses of property in the communities which it serves are to a large degree determined by it. The values of property along its line largely depend on it for its existence. It is an integral part of the communal life. The assumption of its nonexistence and at the same time that the values that rest upon it remain unchanged is impossible and cannot be entertained. The conditions of ownership of the property and the amounts which have to be paid in acquiring the right of way supposing the railroad to be removed are wholly beyond reach of any process of rational determination. The cost-of-reproduction method is of service in ascertaining the present value of the plant when it is reasonably applied and when the cost of reproducing the property may be ascertained with a proper degree of certainty, but it does not justify the acceptance of results which depend on mere conjecture."

Simpson v. *Shepard*, 230 U. S., 352.

It is evident that, as an estimate of cost, Miller's figures are wholly theoretical because no one would build an identical plant but would locate one on the waterfront and make it of a design suitable for making gas in the most economical way. No one can conceive of any gas company in 1919, when gas oil was almost unobtainable, building a plant which could not operate unless it secured large quantities of gas oil. Would not any gas company, building a new plant at that time, take into consideration the enormous selling price of the

residual coke that is obtained in the production of coal gas? Would not any gas company, building a plant in 1919, have utilized as a part of its plant the coal gas system for producing generator fuel for use in the water gas units that would comprise the remaining part of any well designed plant?

We have attempted to demonstrate, in later pages of this brief, that the sum required in meeting operating expenses of the present plant is in excess of the sum required to meet operating expenses in a modern, efficient gas plant. The probable earning capacity of this plant is far less than that of a modern and efficient plant; and, if one seeks to establish by the reproduction cost estimate an exchange or competitive value, the plant with the high operating expense is worth much less than a modern plant which can be efficiently operated. In other words, of the two, the plant with the high production cost must have a low earning capacity and necessarily a lower value than the modern plant, accepting the everyday meaning of the word "value."

Perhaps no better condemnation can be found of the reproduction cost method of estimating value than the decision of the Hon. Charles E. Hughes, as referee, in the case of Brooklyn Borough Gas Company *v.* Public Service Commission, et al.

> "While it is important to consider the cost of reproduction in determining the fair value of a plant for rate-making purposes, it cannot be said that there is a constitutional right to have the rates of a public service corporation based upon the estimated cost of the reproduction of its property at a particular time regardless of circumstances. *To base rates upon a plant valuation simply representing a hypothetical cost of reproduction at a time of abnormally high prices due to exceptional conditions would be manifestly unfair to the*

public, and likewise to base rates upon an estimated cost of reproduction far lower than the actual *bona fide* and prudent investment because of abnormally low prices would be unfair to the company. * * * A public service corporation is entitled to be reasonably compensated for its service and the actual cost of its operations must always be taken into consideration in determining whether or not it receives a fair compensation above that cost. But it is a different thing, after cost has been defrayed and the question is as to the compensation to be allowed in excess of cost, to take as the basis for a compensatory return an asserted plant value, far above the actual investment, which is reached merely by expert estimates of a cost of reproduction under abnormal condition. This would result in allowing a public service corporation to take advantage of a public calamity by increasing its rates above what would be a liberal return not only on actual investment but upon a normal reproduction cost in the view that unless it could make an essentially exorbitant demand upon the public it would be deprived of its property without due process of law. The enforcement of a constitutional guaranty does not require the application of any artificial formula. It has constantly been pointed out that the rate base must be what is called 'the fair value of the property' and that as to this there must be a reasonable judgment based on a proper consideration of all relevant facts [citing Smyth *v.* Ames and other cases]. As was said by the Court of Appeals in the case last cited: 'The cost of reproduction less accrued depreciation rule seems to be the one generally employed in rate cases. But it is merely a rule of convenience and must be applied with reason.' * * *" [Italics ours.]

Brooklyn Borough Gas Co. *v.* Public Service Com., 17 N. Y. State Dept. Reprs., 81.

The Interstate Commerce Commission, *in re Advances in Rates, Western Case* (20 *I. C. C.*, 307, 317), said as to value for rate purposes:

> "The trend of the highest judicial opinion would indicate that we should accept neither the cost of reproduction * * * nor the capitalization, * * * nor the prices of stocks and bonds in the market, nor yet the original investment alone, as the test of present value for purposes of rate regulation. Perhaps the nearest approximation to the fair standard is that of *bona fide investment*—the sacrifice made by the owners of the property—considering as part of the investment any shortage of return that there may be in the early years of the enterprise. Upon this, taking the life history of the road through a number of years, its promoters are entitled to a reasonable return. This, however, manifestly is limited; for a return should not be given upon wastefulness, mismanagement, or poor judgment, and always there is present the restriction that no more than a reasonable rate shall be charged."

Even if the theory of the witness Miller is considered of use in arriving at an estimate of the fair value of the property, his figures should be thrown out by reason of the fact that he did not take into account the present condition of the property as compared with a new property. As an indication of his views and the Master's opinion regarding depreciation, we refer to the record as follows:

> "Q. It is your idea that machinery does not wear out, is it?
> "A. No.
> "Q. It does wear out?
> "A. Yes.
> "Q. Automobiles wear out?
> "A. Surely.

"Q. And boilers wear out?

"A. Surely.

"Q. Everything wears out?

"A. If not properly maintained it will wear out. Anything that is properly maintained does not wear out. If it is not properly maintained it goes.

"Q. Do you want to say that if properly maintained it does not wear out.

"A. Yes.

"Q. Never does?

"A. Never does. There may not be any original part after a series of years, but it will be the same form, the same machine. You can replace part by part.

"Q. Have you ever heard of any court or any writer adopting your theory, Mr. Miller?

"Mr. Ransom—Objected to as absurd.

"The Master—Objection sustained.

"Mr. Ransom—This court has and the Supreme Court has.

"Q. Along these lines?

"The Master—Objection sustained.

"Mr. Chambers—Exception.

"Q. Are you familiar with the different rules laid down by the courts in fixing valuations for rate making purposes?

"Mr. Ransom—I object to that.

"The Master—Objection sustained.

"Mr. Chambers—Exception. Would you mind stating the grounds of your ruling?

"The Master—No, I won't state it.

"Mr. Chambers—Exception.

"The Master—It must be apparent to any reviewing Court. You are cross-examining this witness on a question of fact. We can leave the law out of it, so far as this witness is concerned. He has not qualified as a lawyer.

"Mr. Chambers—I thought I was cross-examining on a theory.

"The Master—I am not talking about theories, I am talking about facts. He states this as a fact.

"Mr. Chambers—It is a fact that they don't wear out?

"The Master—Yes.

"Mr. Cummings—He is an expert witness testifying to a theory.

"The Master—No, he is testifying to a fact.

"Mr. Cummings—We should be allowed to prove that his theory has never been approved by any Court.

"The Master—Go ahead.

"Q. Has this company, the complainant company, ever removed any mains or any other part of their plant because it was worn out?

"A. Not as far as I know.

"Q. Did they remove some purifiers?

"A. Yes.

"Q. Why?

"A. Because they were too small and in the way of the generator house which they were extending. It was cheaper to remove those purifiers and extend the generator house over that site, and put in new purifiers, than it was to build a new generator house. It was purely a question of economy. The purifiers were too small.

"Q. They did not wear out?

"A. No.

"Q. They were not worn out?

"A. No, they were not. Purifiers do not wear out.

"Q. Did they remove any engines because they were worn out?

"A. No.

"Q. Not any?

"A. No.

"Q. Did they not remove any meters because they wore out?

"A. No. Meters have corroded, I have no

doubt. They have in most situations that I have been in, where they are not cared for.

"Q. Then the company did not care for those properly?

"A. No.

"Q. Bad management, was it?

"A. No.

"Q. What kind of management was it?

"A. Very good management.

"Q. Not to care for them?

"A. Very good management in this company.

"Q. Not to care for them?

"A. No.

"Q. Well, I don't know what you mean by 'No.'

"A. No, I don't think you do. The facts are that there are certain exposed places in which gas meters are set. The company cannot go out and build enclosures for those meters. They set meters there, and in some cases they rust. Now, they do not care for them in one sense. That would require probably bringing them in every three months and repainting them. They leave them out there several years, and when they come in they are rusted.

"Q. Are those the only meters they have scrapped that you know of?

"A. As far as I know. They have scrapped very few meters, and I never made any elaborate investigation to get at the cause of the few meters that they have scrapped.

"Q. You say you dug up some mains?

"A. I did.

"Q. And those I suppose you say, as you said in the Consolidated case, would last forever?

"A. They will. There is no limit as far as I know on the life of a cast iron main.

"Q. You don't think they would ever want to take them out because they were inadequate as to size?

"A. I think in many cases—in some cases, not many, but in some cases they have abandoned pipe because it was inadequate as to size, yes, and I have no doubt they will do it again. Flushing is growing rather rapidly, and in the history of all gas companies they abandon pipe because it becomes inadequate as to size.

"Q. Are you acquainted with the term known as improvement in the art?

"A. I have been in the business thirty years, and I have made some inventions in connection with it, so I think I should.

"Q. Would they not replace or displace some of their apparatus on that account?

"A. The whole plant has been rebuilt on that account, and so I take it it may be done again. This was originally a coal gas plant.

"Q. And it is your idea, your testimony, that all of this plant and apparatus, mains and services and meters have their full value from the time they are put in there—have a value equal to cost, we will say, up to the time they are removed?

"A. They have a value greatly in excess of cost.

"Q. Up to the time they are removed?

"A. Greatly in excess of the cost at the present time.

"Q. Right up to the time they are removed?

"A. At the present time this plant has a value greatly in excess of the cost.

"Q. That is to say, here is a main that the company finds is inadequate because it is not large enough, and they replace it by a larger sized main. You say that that main that is replaced has a full value up to the moment when it is displaced by the larger one?

"A. If it is in good condition up to that time, yes.

"Q. Those meters that are rusted, they had a value equal to their cost, did they?

"A. As long as they were performing the

service I have taken them at their value. Every plant must have certain replacements, and parts are continually replaced. The system as a whole has its full value up to the time that it is shut down and abandoned."

(R-842-845, [1266-1271].)

The Master, in his opinion, proceeds upon the theory that the predecessor of the respondent actually paid for "franchises and rights," "preliminary and development expenses," "going value," and "undistributed structural items" the enormous amount of $390,380.06, and that these elements actually cost the said predecessor, Newtown and Flushing Gas Company and its *predecessors*, and were worth on August 1, 1904, at least that sum. He included that amount in his final figure of value, $1,655,877.94. There is no evidence to warrant this conclusion of the Master, and, in fact, no proof was offered that the franchises and rights, overhead expenses, or any of the intangibles, actually cost the respondent or its predecessors one cent over and above the amounts contributed by the consumers. This lack of proof was evident to the Master during the trial, as is shown by the following:

"The Master—Paragraph 7 of the complaint alleges that the said stock of $600,000 and some of the said bonds $816,000, were duly issued in payment of the reasonable value of the plant and the franchises purchased by your orator. As I understand it no proof was submitted of that allegation.

"Mr. Ransom—We have not regarded it as any part of the complainant's direct case to prove the cost of this property of this company. We are standing upon our proof of present value as we did in the Consolidated case." (R. 822 [1232].)

That respondent failed to offer proof of the intangible cost is further shown by the following:

> "Mr. Ransom—* * * The complainant had not as yet offered proof of the cost to the company, the amount which the company paid, in 1904, for the property which it at that time acquired" (R. 1235 [1951]).

In addition, we quote the following:

> "Mr. Ransom—* * * Might I just say a word that I started to say when I was interrupted. The complainant in this case, of course, has stood upon its direct case, upon the proof which it had offered, as to the present value of the property, based upon cost to reproduce new" (R. 1236 [1952]).

The basis for the Master's findings on the value of the property are apparent from his opinion, from which we quote as follows:

> "At the time of the merger of the Newtown and Flushing Gas Company into the New York and Queens Gas Company, the total property and assets of the former (exclusive of working capital) were carried on the books of the former at $694,678.00. Since that time, plant and equipment so acquired by the complainant on August 1, 1904, has been retired, at a book cost totaling $24,189.14. The tangible property acquired on August 1, 1904, and still in service, is agreed to have cost before August 1, 1904, and to have been worth on that date, the sum of $250,108 exclusive of franchises and rights and "going value" and the undistributed structural items under consideration. The deduction of these two items from the book total of $694,678.00 leaves only $390,380.86 as representing the book cost to the Newtown and Flushing Gas Company of the franchises and rights, the 'going value,' and the undistributable structural items here-

inbefore mentioned. There is sufficient evidence to warrant my conclusion upon the present record that the item of 'franchises, good will, etc.,' on the books of the complainant and its predecessors, covered, among other things, preliminary and development expenses and the various other items which Mr. Miller puts in a total of $320,350, and also the cost of 'franchises and rights,' which Mr. Miller puts in at $500,000; and I think it will be fair for me to say, for the purposes of the present case, that for all of these items just referred to, the New York and Queens Gas Company actually paid no more than their book cost to the Newtown and Flushing Gas Company and its predecessors, viz.: $390,380.86, and that these elements had cost the Newtown and Flushing Gas Company and its predecessors, and were worth, on August 1, 1904, at least that sum."

Respondent owned no property, in 1904, other than that acquired by it from the Newtown and Flushing Gas Company, August 1, 1904. There is no dispute on the fair cost at that time of the tangible property so acquired by respondent. It is agreed that it *at that time* amounted to $304,297.00; but it is disputed that said property has not depreciated. On the books of the predecessor, in 1904, there appeared a total book cost for that identical property, of $694,678, so that by deducting therefrom the agreed-upon cost of the tangible property we ascertain that said book figure contained the sum of $390,381.00 which is unexplained in the record.

We contend the Master was not warranted in concluding that there is sufficient evidence to justify the finding that the item of "franchises, *good will,* etc.", on the books of the respondent and its predecessors covered, among other things, preliminary

and development expenses and the various other items which the expert witness, Miller, put in his appraisal at a total of $320,350, and that these items also covered the cost of "franchises and rights," which Miller put in at $500,000. There is no justification for the opinion of the Master that for all of the aforementioned intangible items the respondent "actually paid no more than their book cost * * * $390,380.86, and that these

> "elements had cost the Newtown and Flushing Gas Company and its predecessors, and were worth, on August 1, 1904, at least that sum."

The record is wholly deficient in proof as to the cost or value of the franchises, and there is no evidence to lead the Court to believe that any sums were paid for franchises to the State or to the local authorities in the territory where respondent operates. This fact is apparent from the following excerpts from the record:

> "The Master—What proof is there in the record as to franchises?
>
> "Mr. Ransom—The books.
>
> "The Master—Only that.
>
> "Mr. Ransom—So far, and the franchise documents.
>
> "Mr. Neumann—What do the franchise documents show, the price?
>
> "Mr. Ransom—They speak for themselves" (R. 818 [1225]).

and again at page 1236,

> "The Master—Was there proof offered of the cost to reproduce the franchises?"
>
> "Mr. Ransom—Well, of course, the Miller exhibit in that respect related to the tangible property and the so-called non-distributed

structural cost in connection with the tangible property.

"Mr. Neumann—I understood Mr. Miller especially excluded franchises from reproduction cost.

"The Master—What I am trying to get at is, what basis have I for valuing franchises?

"Mr. Neumann—None at all.

"The Master—I am asking Judge Ransom something, Mr. Neumann.

"Mr. Ransom—I take it that from all of the evidence in this case, the testimony of Miller which related to that point, the evidence shown by the books, the evidence as to the acquisition of the property in 1904 and what was paid therefor, the judgment of the Board of Directors as to the value to be put upon those so-called intangibles—it is not a simple question, it is not a matter which has been adjudicated, it was the situation as to the value of the franchises and rights in the Consolidated case.

"The Master—That is what bothers me.

"Mr. Ransom—I am fully aware that it is a difficult question" (R. 1236 [1953]).

There is an absolute prohibition against the capitalization of franchise rights in the Public Service Commission Law under which respondent operates:

> "§69. *Approval of issues, stock, bonds, and other forms of indebtedness.* * * * Provided, however, that the Commission shall have no power to authorize the capitalization of any franchise to be a corporation or to authorize the capitalization of any franchise or the right to own, operate or enjoy any franchise whatsoever in excess of the amount (exclusive of any tax or annual charge) actually paid to the state or to any political subdivision thereof as the consideration for the grant of such franchise or right. * * *"

In his report to the Court below the Master said, in his findings (No. 34) that the fair value of the property on which respondent is entitled to have a fair return, exclusive of working capital, is at least the sum of $1,520,877.94, and his figure comprises the following items:

1. "Tangible and intangible property acquired at the end of July, 1904, and still owned and used by it on January 1, 1920, exclusive of working capital"...	$670,488.86
2. "Additional land plant, apparatus, mains and other property, less withdrawals, since August 1st, 1904, and exclusive of working capital".....	850,389.08
"Total	$1,520,877.94

The defendant District Attorney, one of the appellants herein, does not propose to burden this Court with a full discussion of the cost and value of the property or to set up figures representing the rate base, as that subject has been fully covered in the brief submitted by the Attorney General to this Court in the instant case. With his views on the subject we are in entire accord.

We contend that the Master erred in finding (No. 34) that respondent's actual investment in the property, and the fair present value, is at least $1,655,877.94. Apart from the error he made in including in the investment a huge amount for franchise value, overhead expenses and other theoretical costs, as already set forth, the Master admitted that he made no deduction for depreciation "in whatever way calculated."

In a later part of this brief we deal with this matter of depreciation in detail.

We claim that respondent wholly failed to sustain the burden imposed upon it of proving the value of the property used and useful in the public service, and for that reason alone the decree should be reversed.

V.

The failure of the Master to take into account depreciation was in violation of the principles laid down by this Court.

The Master in his opinion (R. 57) states:

> "In determining that the complainant's property has a fair present value to at least the amount of complainant's actual investment therein as found by me, viz.: at least $1,655,877.94, I have made no deduction for what is termed 'depreciation' in whatever way calculated."

His reasons for refusing to make the deduction for depreciation are not very clearly presented (R. 57, 58, 59), but apparently are:

1. That the property has been well maintained and furnishes service as if new, and

2. That in respect of a very large proportion of gas property, there is no ascertainable "life expectancy."

As for the first reason, the Master was manifestly led into error by confusing the question whether the property furnished service as good as new, with whether the property itself was as good as new. The property might be furnishing service as

good as new, and yet its various constituent parts might be within a few years of necessary supersession, so that it would manifestly not be as good as new. The age and particularly the remaining life of the constituent parts, i. e., their remaining usefulness, determine whether they are as good as new or whether a deduction should be made for depreciation or impairment of gross capital.

As to the second point, however difficult it may be to ascertain the life expectancy of the remaining usefulness of the constituent parts of the property, it is nevertheless a fact which must be determined in the best way possible to make the requisite estimate of actual or unimpaired investment. Structures, apparatus, mains and equipment actually suffer wear and tear or are out of date to a substantial extent so as to affect their remaining period of usefulness, or have become inadequate for present requirements and will have to be replaced sooner than would otherwise be necessary. The extent of the impairment must be ascertained and deducted from cost new to establish the net capital devoted to the public service.

> "The cost of reproduction is not always a fair measure of the present value of a plant which has been in use for many years. The items composing the plant depreciate in value from year to year in a varying degree. Some pieces of property like real estate for instance, depreciate not at all, and sometimes on the other hand, appreciate in value. But the reservoirs, the mains, the service pipes, structures upon real estate, standpipes, pumps, boilers, meters, tools and appliances of every kind begin to depreciate with more or less rapidity from the moment of their first use. It is not easy to fix at any given time the amount

of depreciation of a plant whose component parts are of different ages with different expectations of life. But it is clear that some substantial allowance for depreciation ought to have been made in this case."

City of Knoxville *v.* Knoxville Water Co., 212 U. S., 1 at page 10.

The following quotation is also to the point:

"In the deduction made by the referee for expenses there is an item of $3,789.37 under the head of maintenance and it is clear that this does not include a proportionate allowance on account of the general depreciation which will ultimately require replacement. We suppose that judicial notice may be taken of the fact that in the conduct of many industrial enterprises *there is a constant depreciation of the plant which is not made good by ordinary repairs, which, of course, operates continually to lessen the value of the tangible property which it affects.* The amount of this depreciation differs in different enterprises, but the annual rate is usually capable of estimate and proof by skilled witnesses. No corporation would be regarded as well conducted which did not make some provision for the necessity of ultimately replacing the property thus suffering depreciation; and we cannot see why an allowance for this purpose should not be made out of gross earnings in order to ascertain the true earning capacity."

Peo. *ex rel.* Jamaica Water Supply Co., *v.* State Board of Tax Commrs., 196 N. Y., 39, at p. 57.

The Master's confusion is indicated by the statement that the "loss due to supersession cannot be said to have accrued during the period when the superseded unit was in service. It occurred when supersession took place. It became a proper charge

against the economies to be realized therefrom." He is palpably mistaken in this view, which in the past has been responsible for a large proportion of present over-capitalization and financial difficulties of public utility companies. It is this view which has charged at every stage the cost of reconstruction to capital account of street railways and other public utilities, ever increasing the interest burden of the properties and finally causing financial collapse.

Plant and equipment do not become obsolete or inadequate in a day. The obsolescence and inadequacy are factors which develop gradually, and their growing presence is usually apparent. When, for example, mains are placed in service, they are then sufficient for the need of the community and the expected service for the indefinite future, but if thereafter the population increases and a constantly increasing requirement is placed upon the mains, they become gradually inadequate and in course of time the fact appears clearly that sooner or later they must be replaced by larger facilities. *The supersession therefore is a gradual accrual and impairment, and at any time in ascertaining the amount of actual investment, it must be taken into account by deducting a proper amount for the depreciation from the cost new of the mains to fix the remaining capital value.*

The following decision is of interest:

> People *ex. rel.* Queens Co. Water Co. *v.* Woodbury, 67 Misc., (N. Y.) 490, at p. 493.
>
> "It would be a false system of accounting which did not take into consideration the destruction of the value of property from whatever cause, so long as that cause is in constant

operation and can be foreseen with reasonable certainty. A loss due to functional depreciation is incurred in the operation of the business, and, therefore, should be charged as an expense of operation. (Citing Knoxville case, *supra.*) Machinery which today is sufficient for its purpose may become scrap iron through the development of inventions; and so pipes and mains, sufficient for a system of water supply as it now exists, may become valueless through changes in the conditions under which it is used. Because an iron pipe will lie fifty years in the ground without disintegration, it does not follow that the pipe will be of value to the company for fifty years. The conclusion reached as the result of actual experience seems to be more reliable. I am, therefore, inclined to approve the estimate of the relator as to the depreciation in preference to that of the city."

The Court of Appeals of this State affirmed the order in *Brooklyn Heights R. R. Co.* v. *State Board of Tax Commissioners*, where the lower court in 69 Misc., 646, at page 656, says:

"As surely as humanity travels to the grave, the machinery and equipment of a public service corporation travel toward the scrap pile. The plant and structures depreciate in less degree but as certainly. This is ordinary depreciation.

"But another form of depreciation in the case of properties here being valued takes place. The machinery or equipment, while still capable of years of service, becomes inadequate to do the work demanded—not only by the corporation, but by the law itself. In the case particularly of electrical machinery, the type becomes obsolete by reason of invention and increasing public demands frequently require in aid of safe and adequate service that the obsolete appliance or equipment give way

to the new. Property which in itself may be almost indestructible in the hands of a public service corporation may be required to be replaced by the requirements of the public which the corporation serves. These requirements for change of plant, structure and equipment and their replacement, can be and are made by the State itself. Some of these changes are capable of definite ascertainment. Others are not so readily ascertainable. Many of them, however, may be provided against for the future by setting apart from gross earnings a reasonable sum to create a reserve against the day when they shall come."

Whether or not the company accumulated a "depreciation reserve" is of no consequence. If it did, it followed sound principles of finance and actually maintained its full investment according to the intent of the law against impairment of capital.

But if not, the depreciation is nevertheless real and must be taken into account in determining the actual investment. In the first instance, the unimpaired capital is equal to the gross cost of the property, less the amount of the depreciation reserve, and this net figure is equal to the original amount of money devoted to the enterprise by the stock and bond holders. In the second instance, the company has suffered an impairment of capital and the actual investment is thus the cost of the property, less the estimated depreciation. In either case the actual investment is the cost less deduction for depreciation covering wear and tear, obsolescence, inadequacy and all other factors of deterioration and impairment.

> "If, however, a company fails to perform its plain duty and to exact certain returns to keep the investment unimpaired, whether this is the result of unwarranted dividends upon

> overissues of securities, or of omission to exact proper prices for the output, the fault is its own. When, therefore, a public regulation of its prices comes under question, the true value of the property then employed for the purpose of earning a return cannot be enhanced by a consideration of the errors in management which have been committed in the past."
>
> Kansas City So. Ry. Co., *v.* U. S., 231 U. S., 423, at p. 448,

quoting approvingly the court's former decision in City of Knoxville *v.* Knoxville Water Co., 212 U. S., 14.

In this case, as is demonstrated elsewhere, the respondent earned a net income sufficiently large to set aside an amount sufficient to cover depreciation; in fact the respondent did up to 1914 set aside moneys for renewal and contingency, which fund it converted into a new contingency fund by resolution of the Board of Directors, on November 16th, 1915 (R. 703). If the respondent has failed to set aside a sum sufficient for a depreciation reserve it has deliberately failed to compiy with the requirements of the uniform system of accounts prescribed by the Public Service Commission, the decisions laid down by this and other courts and the sound principles of financial management universally recognized and incorporated among other places in the system of accounts prescribed by the Interstate Commerce Commission.

> "This in effect ignores depreciation—an inevitable fact which no system of accounts can properly ignore." Kansas City So. Ry. Co., 231 U. S., 423 at 449.

The Master, referring to the testimony of the witness Hines (R. 59) to the effect that the de-

preciation reserve should be accumulated and invested in property and that in such a case when the funds are needed for renewals and replacements they would be provided by issuing securities against construction work which has been done out of depreciation funds, states that:

> "The obvious fact that having deducted the amount of reserve temporarily invested in property from that on which he proposed the company should be allowed to earn a return, has, to all intents and purposes, destroyed the earning power of such property and investments; that therefore he could not issue any securities against such property, there being no earnings therefrom with which to pay interest on securities; that the reserve could never, therefore, be availed of for the purpose for which it was alleged to have been created, and that it would be, in fact, as if it had never been created. Thus he not only failed to sustain his contention that a 'depreciation reserve' was necessary for the purposes which he alleged, but he proposed to treat the reserve as if he himself believed it to be both unnecessary and ineffectual, except for the purposes of justifying a deduction from the complainant's investment."

By this statement the Master seemed to consider that he demolished completely the contention for the deduction of depreciation. But as a matter of fact the discussion is entirely besides the point, because as heretofore shown the amount of depreciation does not depend upon whether a reserve has been kept. The Master, however, shows himself singularly confused in this treatment of the matter and clearly does not grasp the effect of the witness' testimony. If a "depreciation reserve" has been accumulated and the funds expended for property, then as an arithmetical matter the total

cost of the property including the invested reserve is by so much greater than the original investment; so that if the amount of the reserve is deducted from the total cost the full actual investment is shown; and if a return is allowed on the amount the earnings will be adequate to meet the requisite interest and dividend payments. This is so elementary as to require apology for its statement. Then, when renewals and replacements are made, the necessary cash, since the depreciation funds have already been expended for property, may be obtained through the issue of new securities. This process thus results in a net additional investment, upon which a further return would be allowed, and the earnings would be sufficient to meet the new interest and dividend charges. At this stage again, after the old property has been taken out of capital account and deducted from the depreciation reserve, the net actual investment would be equal to the total cost of the property less the balance of the depreciation reserve—and none of the conclusions of the Master are applicable to the situation which he clearly did not comprehend. But suppose no depreciation reserve has been accumulated, nor a substitute of so-called surplus, then all additions to property must be financed out of new security issues with corresponding increases in gross investment. Now suppose substantial supersessions take place, resulting in retirements of old property and installation of corresponding new facilities. Then, clearly, new securities must be issued for the replacements, resulting in a greater showing of gross investment, and if the retired property is taken out of capital account it stands as a manifest impairment of capital; the total securities will be correspondingly in excess of even the

total gross cost of the property left in service. The depreciation reserve is thus necessary not only to meet the actual retirements of plant and equipment but to make provisions for the retirement as the factors limiting their life gradually work their effect. If there is no such accumulation of reserve, and no corresponding other allowances, there is inevitable impairment of capital although not shown directly by the accounts, and the determination of actual investment thus requires the computation of depreciation to be deducted from the gross cost of the property.

The Master is equally wrong in his final conclusion that if a depreciation reserve is accumulated its effect is to make piecemeal purchase of the property—"really asking the consumer to pay for the plant instead of paying a return on the investment" (R. 59). But, the accumulation of the reserve adds *pari-passu* to the gross cost of the property and therefore does not diminish the contribution to the total cost by the security holders. The reserve simply provides for the proportion of the total cost of plant and equipment in use properly chargeable to past operation whether for physical wear and tear or for obsolescence and inadequacy which have already appeared and have shortened the remaining life time of the constituent parts. At any time, therefore, the total cost of the property, less the depreciation reserve, is equal to the actual investment by the security holders; there is never a diminution, no piecemeal purchase, and the return on the investment is not affected. The accumulation of the reserve simply takes out of earnings the proper allowance for the complete maintenance to prevent impairment. It does not result in amortization or purchase of capital.

To bolster up the theory claimed by the respondents through the witness Miller and sustained by the Master and the Court below, resort is necessarily had to the proposition that there is no depreciation. Mr. Miller (R. 843), testified as follows:

> "Q. They don't wear out? A. No.
> "Q. They were not worn out? A. No, they were not.
> "Q. Purifiers do not wear out? A. No.
> "Q. Not any? A. No."

Respondent claims that there should be no allowance for depreciation whether the basis be original cost, book cost or reproduction cost new. Mr. Miller, testifying with reference to a Ford Runabout Automobile purchased in 1913, took the position that not alone was the respondent entitled to a return upon the cost to reproduce new but made no allowance for depreciation whatsoever, despite the fact that the car had been in use for seven years. He did this presumably upon their theory that replacements of parts could be had from time to time, the automobile could continue in service forever, implying therein two propositions, (1) that the Ford Car could continue to give service as good as new forever, and (2) that its value was therefore the value of a new car. The following is his testimony on that point (R. 838):

> "Q. This Ford Runabout Model 1912, how old was that? A. That was bought in 1913.
> "Q. So that the Ford is seven years old, and you put a price of $546.50 on it? A. Yes."
> "Q. That is reproduction? A. Yes.
> "Q. That is what they paid, is it, in 1912? A. Yes, in 1913."

The witness Miller testifying with reference to other automobiles in use by respondent (R. 836),

when pressed as to the proposition that cars would eventually wear out did admit that they would, answering as follows:

> "A. Automobiles will wear out, certainly." (R. 836 [1257])

and attempted to justify the figures he gave on the ground that the original cost of these automobiles was less than the reproduction cost, thereby evading the issue as to whether or not there was depreciation. The record thus discloses his admission in this instance that automobiles do wear out and on the other hand that purifiers do not, as disclosed in his testimony above set forth.

It is submitted that the decisions of this Court and other courts, below set forth, have amply sustained the common experience of mankind that all equipment sooner or later gives out and becomes useless for the service it is intended to render and finally have no other value than that of mere scrap or junk.

In *People* ex rel. *Kings County Lighting Company* v. *Willcox*, 156 App. Div., 603, 616, after quoting a portion of the opinion in *Knoxville* v. *Knoxville Water Company*, 212 U. S., 1, 13, the Court said:

> "This quotation completely answers the contention on the part of the relator that no allowance should be made for depreciation because the evidence is that the efficiency of the relator's plant continued to be equal to 100 per cent.; since it is manifest that deterioration to some extent must precede the loss of efficiency, and the mere fact that the efficiency remains stable does not necessarily contravene the other fact that deterioration has set in.
>
> "In the case at bar the Commission followed the rule laid down by the Court of

> Appeals in *People* ex rel. *Manhattan Railway Company*, vs. *Woodbury*, 203 N. Y., 231, as to the method of estimating the depreciation and the rule indicated by the Knoxville case of deducting the thus ascertained amount of accrued depreciation from the cost of reproduction new to ascertain the present value of the tangibles in use. We think this entirely proper, especially in view of the fact that it allowed appreciation in land values."

Respondent's witness O'Connor, testifying as to the value of buildings owned by it, was questioned as to deterioration. He was compelled to go so far as to admit deterioration, though he would not admit that they would deteriorate to such an extent that "they would not be any good at all" (R. 804). However, the Master despite his subsequent opinion did comment as follows (R. 804):

> "The Master—It depends on how a building is cared for as to how long it will last. If you take care of a building properly it will last 50 or 60 years."
>
> To which O'Connor responded as follows:
>
> "The Witness—And longer than that too."

Inasmuch as the judgment of the court below is based upon the estimated cost of property with no deduction for accrued depreciation, it should be reversed.

VI.

Appellants have not had a fair trial.

In the case of *City of Knoxville* v. *Knoxville Water Company*, 212 U. S., Mr. Justice Moody, writing for the Court, said (p. 8):

"There can be at this day no doubt, on the one hand, that the courts on constitutional grounds may exercise the power of refusing to enforce legislation, nor, on the other hand, that that power ought to be exercised only in the clearest cases. The constitutional invalidity should be manifest, and where that invalidity rests upon disputed questions of fact the invalidating facts must be proved to the satisfaction of the court. *In view of the character of the judicial power invoked in such cases it is not tolerable that its exercise should rest securely upon the findings of a master, even though they be confirmed by the trial court. The power is best safeguarded against abuse by preserving to this court complete freedom in dealing with the facts of each case.*

"Nothing less than this is demanded by the respect due from the judicial to the legislative authority. It must not be understood that the findings of a master confirmed by the trial court are without weight, or that they will not, as a practical question, sometimes be regarded as conclusive. All that is intended to be said is, that in cases of this character this court will not fetter its discretion or judgment by any artificial rules as to the weight of the master's findings, however useful and well settled these rules may be in ordinary litigation. We approach the discussion of the facts in this spirit."

The Master throughout the trial was very hasty and impatient and evidenced this attitude almost exclusively towards appellants' counsel. The record discloses reference by the Master to the extreme value of his time and his desire to shorten the proceeding so as to enable him to attend to his business affairs elsewhere. The following excerpts support this statement:

"The Master—* * * Counsel in this case from now on must not assume that time is go-

ing to be occupied. They must have the witnesses here. My time is getting too valuable and too short, I cannot afford to do it. Every minute counts with me now" (R. 1011).

During the discussion as to whether or not tax reports were competent proof as to the value of the real estate, some little discussion ensued, whereupon the Master broke out with the following:

"The Master—If you are going thus to keep me going until one o'clock you need not waste any more time with it

"Mr. Newman—No, I am not.

"The Master—*Because I can go out and talk business for a few minutes*, if that is what you are driving at. But there is no sense in keeping up the discussion" (R. 1013).

And again at page 803:

"The Master—We have had that, go on.

"Mr. Chambers—Let him say.

"The Master—You are going to finish with him before one o'clock; now go ahead."

His impatience was such that he seemed to have advance knowledge as to what question counsel was to put to the witness, as appears from the following:

"Mr. Neumann—Just one more question—I don't know whether it is covered.

"The Master—Sure, it is covered.

"By Mr. Neumann—Do you know where the testing station of the New York and Queens Gas Company is?

"The Master—Yes, that is covered. It is in the same building, on the same riser, the same case all right. Mr. Wacker, step down."

We deem it our duty to call the Court's attention to the Master's attitude to the statutory law.

His preconceived ideas were boldly expressed in the following:

> "Mr. Neumann—May I put this objection on the record here, that the statute requires this company to furnish 22 candlepower gas; that means very (obviously every) part of the day.
>
> "The Master—I think it is a perfectly stupid, silly statute." (R. 1117.)

The Master's irate attitude and lack of judicial temperament were exhibited when Mr. Tobin for the Attorney General, offered proof as to violations of the statutory requirements as to candle power between the years 1914 and 1918, which the Master declined to accept on the ground that he would "not go back as far as that" (R. 1016). The following colloquy ensued:

> "The Master—Nonsense; you do not expect me to find a deliberate violation of law with a record like that?
>
> "Mr. Tobin—For the four years between 1914 and 1918 the average shows a violation of law.
>
> "The Master—Oh, you won't get anywhere with me on that stuff. Make your record."

The Master did not hesitate in the midst of the trial to embarrass counsel by characterizations of counsel's line of questions as stupid, and to unduly restrict and restrain counsel from making what he deemed to be proper objections. The following colloquy is typical:

> "Mr. Newman—Objected to on the ground it is incompetent, irrelevant and immaterial, based upon an assumption, and hypothesis and a guess, and no proper foundation laid for it.
>
> "The Master—I do not believe you know what you are talking about.

"Mr. Newman—What was the Master's comment?

"The Master—It is quite apparent to me you don't know what you are talking about when you object to a question of that kind.

"Mr. Newman—Exception.

"Mr. Cummings—You don't know what it is going to lead up to. That is all.

"The Master—I am trying to indicate to you; I am trying to cross-examine this witness."

The Master's air of superiority and his criticism of counsel, is illuminated by the following extract:

"The Master—The trouble, Mr. Tobin, is that you are about twenty-five years younger than I am, and you don't recall the trouble that these companies had to get the people away from coal ranges and to the use of gas, and once having gotten them to use gas you don't need to do any more to get them to use it. That is what I am trying to bring out from Colonel Miller. I have not seen coal ranges to speak of in that Flushing section in fifteen years.

"Mr. Tobin—The particular point about it, if the Master please, is that there is considerable to be read into the record here, capital expenditures which are not capital expenditures.

"The Master—I am not worrying about that.

"Mr. Tobin—Well we are worrying about it.

"The Master—I am trying to demonstrate the proposition in behalf of the defendants that there is not any going value for me to allow in this case, and you are not letting me do so. It is a perfectly stupid line of objections; there is no sense to it at all. I am asking him whether there was in 1865, 1866 or 1870, and I am trying to eliminate it since 1904, and you gentlemen will not let me. It seems to me my

duty in this case to get this record in such shape that it will clearly present my views on this question of going value, and I am going to do it. Both sides can keep on objecting as long as they please.

"Mr. Newman—We are endeavoring to make the record.

"The Master—You are simply lumbering up the record with a lot of useless objections."

(R. 865.)

Further on (R., 866), Mr. Newman for the Public Service Commission objected to a question put by the Master, whose purpose it was to elicit the fact that in a section like Douglaston "where houses are going up" and where they have been pressing for the extension of gas mains to get gas "no expenditure of money is required to get them to use gas," his objection was to the entire line of questions of this sort. The Master said as follows:

"You can go on and object as often as you like and make yourself as ridiculous as you please. The objection is overruled."

To which exception was duly taken.

Another illustration occurs in the Record at page 798:

"The Master—As a matter of fact the bill on its face shows that there is some tax unpaid for the year prior to 1919. It may be a special franchise, it may be a real estate tax, but it has nothing to do with his testimony.

"Mr. Newman—And we had the officers of the company here who could have identified that and we could have gone into that question; we are deprived of our rights to cross-examine on that point and put it on the record.

"The Master—That is nonsense.
"Mr. Newman—Exception."

While endeavoring to bring out the strong interest of the witness Alrich, who testified that he was employed by respondent and that his salary was paid by the Consolidated Gas Co., the parent company of the respondent, and that the said Alrich had previously testified in another case that he devoted all his time to the Consolidated Gas Co., the Master broke out with the following impetuous statement:

> "The Master—He is very much interested; he has already stated that he is employed by the Consolidated Co., which company owns all the stock of the New York & Queens Co., and he feels that this is part of his employment and he is paid by his employer. Now, if you want to show that he has been convicted and had been to jail, go ahead, if you think that will have any bearing" (R. 499).

The Master's lack of judicial poise and his injudicious use of language is evidenced in another outburst:

> "Q. Then suppose I present another situation where a half dozen men in this room have gotten suddenly crazy and want to own the gas business, and they want this particular plant like Flushing; for some reason or other they think there is a great future to it—and the New York & Queens Gas Company and its trustees know the situation. Now, they are not going to sell it for what it is going to be replaced for, ordinarily, are they, to these crazy people that are going into this business?" (R. 1422).

The Master was unreasonable in the demands made upon counsel for the Public Service Commis-

sion to immediately proceed to cross-examine Mr. Allison, who presented (R. 1103-1117) his views on whether or not depreciation should be deducted for purposes of rate making. The following colloquy occurred:

> "The Master—I see no reason for postponing this cross-examination. *If I were counsel for the defendants I could proceed with it very easily.*
>
> "Mr. Newman—I will tell the Master that I am not prepared to go on, and if I am forced to go on I will have to put myself in the hands of the Master and bow to his wishes, and respectfully except to his forcing me to go on at this time with the cross-examination.
>
> The Master—*Well, I direct you to.*
>
> Mr. Newman—I take an exception."

Thereupon Mr. Newman proceeded as best he could to cross-examine the witness on a very technical matter which required careful analysis.

The Master's arbitrary attitude towards appellants' counsel and his exacting demands in the quality of the proof when offered by them, is evidenced by his requirement that official records of tests made by inspectors of the Department of Water Supply, Gas and Electricity were not competent proof unless substantiated by the testimony of the inspectors themselves (R. 1030). Further, when the testimony was offered, the Master was critically careful about the order of the proof and insisted that Mr. Wacker, the official who made the gas tests, was to first testify and then Mr. Birdsley was to corroborate Mr. Wacker's testimony, the former having been present when the latter made his tests. The Master had apparently definitely made up his mind in advance as

to the unreliability of tests for candle power. At page 1031 occurs the following:

> "The Master—Yes, I am going to have Mr. Wacker get on this stand and I am going to have him testify as to what he did, and I am going to bring out from Mr. Wacker, *as I did from Mr. Wacker on the Consolidated trial, that it is a matter of human judgment subject to human error.* You might as well understand it now as any other time."

It would seem that if there be any merit in this view it was the duty of counsel for the respondent to handle the affairs and interests of the company at the trial, particularly as it was represented by able and distinguished counsel, who had gone through a long trial of the Consolidated case, and who was undoubtedly wholly conversant with the testimony in that case, as referred to by the Master. This was unjustified intrusion and taking the advocate's part.

The Master evidenced his extreme impatience and intolerance and unduly interfered with cross-examination, as is evidenced in the following:

> "A. Oh, I do not recall just what year it was.
>
> "Q. About four or five years ago?
>
> "A. I think this one is No. 2.
>
> "Q. And how many years does this cover?
>
> "A. I cannot tell you all that without looking at it. It is in my testimony before when I was looking at the books.
>
> "Q. Would you mind looking at it: it is right in Court here?
>
> "The Master—*I'm not going to waste time on that;* I will not let the witness look at it.
>
> "Mr. Neumann—Does your Honor by rule mean—— What is that?
>
> "The Master—I will not let witness look at it. Look at it yourself."

The Master's arbitrary attitude towards the counsel is well illustrated in the following colloquy (R. 525):

"The Master—I want to get my records straight today. There is no appearance by the Queens County District Attorney, is there—no counsel representing the District Attorney of Queens County?

"Mr. Chambers—You have ruled him out apparently.

"Mr. Cummings—You have ruled him out.

"The Master—I am saying now, Mr. Hyatt having left the room, is there any counsel representing the District Attorney of Queens County? I understand there is not and the records will so show. I know that the District Attorney of Queens County ought to be represented, and I wanted the record to show that he is not.

"Mr. Chambers—If the Corporation Counsel cannot get in any other way then we will appoint him counsel.

"The Master—You will not.

"Mr. Chambers—I will get some more. The Court cannot stop us from having another.

"The Master—I am going to make a rule about you now. Who is going to handle this case for the Attorney General?

"Mr. Chambers—Why, there are several of us here.

"The Master—Well, who is going to do the talking now?

"Mr. Chambers—I cannot tell you.

"The Master—Somebody is going to do the talking for the Attorney General's office, and one counsel is going to be recognized and not more than one. Who is it going to be, Mr. Chambers? You can make your own selection.

"Mr. Chambers—I cannot tell you at this time.

"The Master—Mr. Tobin, isn't it?

"Mr. Tobin—Yes.

"The Master—Having last taken the floor, I will recognize Mr. Tobin and nobody else.

"Mr. Chambers—I take an exception.

"The Master—And the stenographers will take no statement by anybody else from the Attorney General's office until I get a statement that Mr. Tobin has been supplanted.

"Mr. Tobin—Why, that is not proper, if the Master please, because I am working entirely under the direction of Mr. Chambers.

"The Master—I want to know who represents the Attorney General here, once and for all. I am going to take objections by all counsel, Mr. Chambers can make the statement or not, just as he pleases.

"Mr. Chambers—No, I decline to make the statement as to who is going to do the talking. I am perfectly willing to abide by the ruling that one counsel talk at a time. You can make your ruling and I will take exception.

"The Master—I did not say anything about one counsel talking at a time. *There is only one going to do the talking today.*

"Mr. Chambers—I take an exception, I decline to say that today, because I have not considered that. Throughout these cases I think it is perfectly proper for the Attorney General to be represented by one or more counsel, and it is perfectly proper for one or more to cross-examine, so long as one starts it and completes it.

"The Master—For the orderly conduct of this proceeding I shall only recognize one counsel talking in behalf of the Attorney General. The Attorney General can have six representatives here, if he so desires, but only one counsel will be recognized today. Mr. Tobin having taken the floor and cross-examined the last witness, I am going to recognize Mr. Tobin and nobody else today.

"Mr. Chambers—I take an exception."

We respectfully state the attitude of the Master was out of harmony with the reasonable rules in general vogue in the Courts, and, in this instance, highly prejudicial to the interests of the defendants.

A question was made by one of appellants' counsel to ascertain from Mr. Raynor, Secretary of the respondent, the source of certain figures given by Mr. Raynor in the exhibit offered in evidence as to the cost of mains and services added to the account as it stood on January 1, 1919. This was proper information that counsel was entitled to elicit from the witness. The Master, in the abrupt manner that characterized him throughout the trial, would have none of it. We quote the following:

> "Q. Well taking the cost of mains and services that were added to the account as it stood on January 1, 1919, how did you obtain that value?
>
> "The Master—What is that?
>
> "Q. Taking the mains and services laid in the year 1919 which were added to the mains and services value as of January 1, 1919, how did you obtain the figures there necessary to add to the mains and services as they stood on January 1, 1919?
>
> "Mr. Ransom—Objected to on the same grounds, not cross-examination of this witness. You cannot put in an exhibit and then turn around and cross-examine the witness about that exhibit. The document itself shows the method and the peculiar basis laid down by the statute.
>
> "Mr. Tobin—The statute has nothing to do with it. I am simply asking Mr. Raynor how he got his figures and what was put in there for the mains and services for 1919.
>
> "The Master—Put in where?
>
> "Mr. Tobin—Put in this report.

"The Master—Objection sustained.

"Mr. Tobin—Exception. If your Honor please, I think we are entitled to know how they obtained their figures."

(R. 799.)

Mr. Woods, who attempted to qualify as an expert, was not to be thoroughly examined as to his qualifications. It was sufficient for the Master that he had been in charge of operations of plants of large gas companies. His views are palpably erroneous on that point, which is clearly evidenced in the following:

"Mr. Ransom—I object to the question, it has nothing to do with his qualifications.

"Mr. Hyatt—I want to test his knowledge.

"The Master—The question will not be allowed.

"Mr. Hyatt—Exception.

"Mr. Hyatt—He is partially qualified, I will concede that.

"Q. The cost of labor, Mr. Woods, is that about uniform with respect to certain kinds of labor in all gas works?

"The Master—On the general gas making industry and I am going to accept him as such without further waste of time.

"Mr. Hyatt—Exception.

"Mr. Neumann—That inures to the benefit of all defendants.

"The Master—Certainly. There must be somewhere or sometime in this case when counsel will concede that day is day and night is night.

"Mr. Hyatt—I object to that. I do not want to be captious at all, but this is technical information we are after and I think the witness should qualify thoroughly.

"The Master—I say it is perfectly ridiculous to even suggest that a man who has been

in actual charge of the operation of the plant of the Consolidated Gas Co., and of the Astoria Light, Heat and Power Co., and this company and the Standard Company, for over twenty years, with the responsibility that this man has had, according to his sworn testimony here, is not competent—I say that is a ridiculous position to take.

"Mr. Chambers—Do you think that a lawyer engaged in practice for twenty years, makes him a lawyer? I don't.

"Mr. Ransom—With some it does not.

"The Master—I *Man who has practiced law for twenty years is competent to testify as an expert on matters of law; I don't care how good or bad he is.*

(R. 402.)

VII.

Respondent's books of account, admitted in evidence over objections and exceptions of appellants, are not proof of their contents.

The Master found and reported that (8):

> "Since January 1, 1909, the books of account of the complainant company and of all other gas companies in the City of New York have been required to be kept in accordance with the rules and regulations of the defendant Public Service Commission of the State of New York for the First District, which Commission has had certain jurisdiction over said companies pursuant to the provisions of

> the Public Service Commission Law of the State of New York, and find that the books of the complainant company have been kept in conformity with the said rules and regulations and that they accurately set forth the facts therein undertaken to be shown." (R. 35 [59].)

Under his rulings, and over the objections of counsel for appellants who took exception to these rulings, the Master admitted in evidence the General Ledger, Journal, Operating Expense Ledger, Accounts Payable Ledger, General Cash Ledger, and many Tabulations from the books of account.

The books admitted are merely partial transcripts of other books, records and papers, many of which were not proven or even produced.

In the Consolidated Gas Company case which is now before this Court and is to be heard simultaneously on the appeal of the defendant state and local authorities, this point is argued at length in the brief of the appellant District Attorney Swann. It is therefore unnecessary for us to argue it herein, but we believe there are several aspects in which the record in the instant case differentiates the facts and makes the error of the Master altogether inexcusable. He himself saw there were even better grounds in this case than in the other and larger case for calling upon the respondent to produce proof of its operations:

> "By the Master:
>
> "Q. You have not made entries in them yourself?
>
> "A. Not in general books, no.
>
> "Q. In any books?
>
> "A. Well, some of the subsidiary books, yes. For instance, I approved all vouchers, all sundry creditors' vouchers, and classified them.

"Q. But the actual bookkeeping work is not done by you or under your immediate direction; you have a chief bookkeeper or accountant or somebody?

"A. Yes, but I am in conference with him all the time. He comes into my office and asks me questions with regard to the books, and I look over them.

"By Mr. Ransom:

"Q. So you classify the vouchers for materials and supplies and the like?

"A. Yes, I do.

"Q. And do you make up the various reports of the company?

"A. Well, they are made up under my direction.

"Q. That is, you have direct and personal charge of the doing of that?

"A. Yes.

"Q. Are you familiar with the books of the New York and Queens Gas Company, and the method of making entries therein?

"A. I am.

"Q. Will you describe what books of account and subsidiary records were kept by the New York and Queens Gas Company during the years 1919 and 1920.

"The Master—Do you believe that this will be a case where I am forced to take in general books of account, the same as I did in the Consolidated Case?

"Mr. Ransom—I so think.

"The Master—I should not imagine it would be very difficult to put in somewhat better proof here.

"Mr. Ransom—I think we will be able to produce somewhat more detailed proof in certain respects.

"The Master—You can have the man who made the entries in books, I imagine, and bring in the original papers, with a small company like this.

"Mr. Ransom—We can do something like that." (R. 180 [54-55].)

Respondent called as witnesses, who had knowledge of the books:

(1) Maynard H. Spear (R. 177) General Manager since 1907, who was asked to describe *the system* by which entries relating to the costs of materials used in the manufacture of gas find their way into the operating expense ledger (R. 181).

The Master again showed, at this part of the record, that he was not satisfied with the paucity of proof that was being presented:

"The Master—Yes. I have been asking these questions, Judge, to indicate how you might give us better proof on this than you did in the Consolidated Case.

"Mr. Ransom—Perhaps not better proof, but more proof.

"The Master—Well, perhaps a little better too." (R. 184.)

Spear was also asked to describe *the method* by which the record is kept of the amount of coal used, and *the system* of keeping track of the labor elements.

He did nothing more than describe a system, as the Master said in almost those very words. (R. 185 [63].) See also page 201 of the record.

(2) Arthur W. Teele, a public accountant, employed by respondent in the latter part of 1918 to make an examination of the accounts for the year 1919 and for 1918 (R. 222 [125]) with a staff of assistants. He merely made a percentage check of certain records, well instanced by the following:

"A. The consumers' accounts for sales of gas are contained in nine ledgers. I took one hundred accounts for the months of January, February, November and December, 1919. * * * * and checked them from the

original index books to the consumers' ledgers and to the "bill registers, or consumption record, as it is called, in which the total amount of gas entered upon the consumers' ledgers is made up. We did that for four months, and checked the summaries for all the months in the year to the journals, and from the journals to the ledger accounts representing the sales." (R. 230-1 [139-10].)

(3) William Raynor, Secretary (R. 262), who is not a certified public accountant but has immediate charge of the books of account of the respondent. He became secretary in January, 1920 (R. 263), and before that was head bookkeeper and chief clerk. He testified that with two exceptions the books are kept in accordance with the uniform system of accounts (R. 264). The setting up of renewals and replacement account, on the instructions of the Board of Directors, results in a credit balance, or, in other words, the actual charges are less than the sum resulting from the setting aside of three cents per M. cubic feet of gas sold (R. 265). He tests *the accuracy* of the books of account *by trial balance at the end of each month*. In answer to the Master's question he testified that he does not make the entries in the books but had made them previous to May, 1919 (R. 266), although only some of the entries in the books in evidence are in his hand writing.

All that Raynor proved was that in his belief the entries made by him were correctly transcribed from other records that he did not make (R. 267).

The character of proof presented by respondent is shown by the following questions to and answers by Raynor.

"By Mr. Ransom:

"Q. Are you prepared to say the books of account and records correctly reflect the transactions of the company?

"A. They do.

"Q. Are they correctly kept?

"A. Yes, sir." (R. 267 [201].)

Raynor testified that a bookkeeper kept these books of account since May, 1919, and that Miss Mold and Mrs. Townsend also made entries in the books (R. 268).

(4) William J. Foy, General Bookkeeper, not a certified public accountant (R. 287) who, since May, 1919, has had charge of the books. He merely testified to entries in the general books that are in his handwriting (R. 288). His direct testimony takes up less than two pages of the record.

This bookkeeper never checked any of the underlying data:

"Q. Now, Mr. Foy, if I understand your testimony correctly, it is to this effect, that if the underlying data from which you make the entries is incorrect, then the entries in the books are also incorrect, and if the underlying data is correct, then the entries in the books are correct—is that true?

"A. *I never checked back any underlying data. I take what is given to me as being correct.*" (R. 291 [246].)

(5) Martin Morrison, Superintendent (R. 569), who testified as to the method of receiving materials at the works. He had no personal knowledge of the quantities received or the amounts used. He merely prepares monthly statements of the daily operations, but these were shown to be in error in several instances.

It is very evident that the books admitted in evidence are not books of original entry, and yet not one witness was called by respondent to prove the underlying data on which the entries in these books rest.

We respectfully refer the Court to the brief of the defendant Swann in the Consolidated Gas Case, which case is now before this Court, wherein, at page 171, it is contended the cases agree that the books offered must be books of original entry, that *the one who made the entries therein* must be produced and testify as to their accuracy, or his death or unavoidable absence must be established before secondary evidence of the entries made by him is permitted, and that a sufficient amount of competent evidence of the underlying data must be adduced so as to give a circumstantial guarantee that as the books are shown to be correct for a selected limited period, they are accurate for the entire period covered.

In this case, as in the Consolidated Gas Case, these elementary rules were flagrantly violated by the Master, as is evident from the foregoing pages of this brief.

In the instant case the appellant's did not demand verification of *every item* first hand. They did insist that, as to some essentials, the figures in the books should be explained and proved by some one who had personal knowledge of the facts.

We contend that respondent failed to prove the cost of making gas by merely offering the books in evidence, and for this cause alone the judgment should be reversed.

VIII.

The statute is presumed to be constitutional. The burden of proof is on the Respondent to establish the contrary beyond a reasonable doubt.

We do not deem it necessary to here argue at length in support of this thesis. The character and weight of proof required to set aside a statute as unconstitutional is so fully sustained by abundant judicial authority as to but need an enumeration of the cases.

Supreme Court of the United States,

OCTOBER TERM, 1921.

No. 296.

CHARLES D. NEWTON, as Attorney-General of the State of New York, and ALFRED M. BARRETT, constituting the Public Service Commission of the State of New York for the First District,

Appellants,

AGAINST

NEW YORK AND QUEENS GAS COMPANY,

Appellee.

BRIEF FOR APPELLEE.

This appeal by the defendants below is from a final decree which enjoined as confiscatory the further enforcement of a statutory rate of One Dollar ($1.00) per thousand cubic feet, for gas sold by the appellee in the Third Ward of the Borough of Queens, City of New York.

The decree appealed from was entered in the United States District Court for the Southern Dis-

trict of New York, on November 19, 1920, upon the direction of the Honorable Julius M. Mayer, District Judge, before whom the case came for hearing, after the testimony had been taken before a Special Master.

The One Dollar ($1.00) rate enjoined was prescribed by Chapter 125 of the Laws of 1906, to be effective in that portion of the City of New York after the year 1910.

The proofs submitted in this case covered the years 1918, 1919 and the first five months of 1920.

The final decree of November 19, 1920, held the One Dollar rate confiscatory and void as to the appellee, and enjoined the appellant public authorities from seeking to enforce the statutory rate or the penalties prescribed for violation of it.

Statement.

The suit was started April 7, 1919, and was referred to a Special Master on May 19, 1919 (page 25). By reason of the fact that counsel on both sides were continuously engaged in the trial before the same Special Master of the case of the *Consolidated Gas Company* involving the rate fixed by the same statute for the Boroughs of Manhattan and The Bronx, the trial of this suit before the Special Master was not begun until after the close of the *Consolidated Gas Company* case in the spring of 1920. The Special Master's report was filed July 16, 1920, and the final decree was entered on November 19, 1920.

The Property of the Appellee.

The appellee supplies gas to the inhabitants of what is now the third ward of the Borough of Queens in the City of Greater New York, formerly the Town of Flushing, County of Queens. It owns a plant for the manufacture of water gas in the former village of Flushing, having a working capacity of 2,250,000 cubic feet of gas per day. It owns and uses more than 130 miles of gas mains in this sparsely settled territory, through which it furnishes gas to approximately 11,000 consumers (finding No. 6, pages 34 and 35). In 1919 its total sales were approximately 336,000,000 cubic feet of gas.

The Report of the Special Master.

The Special Master made detailed findings (record, pages 32 *et seq.*) as to the various facts proved before him, and also filed a separate opinion stating the reasons for his decision (page 46). Evidence as to the cost of making gas was presented for the years 1918, 1919, and for five months of 1920, and the findings separately state the manufacturing cost for those periods. The principal findings of the Master may be briefly summarized as follows (pages 38-40):

Cost of manufacture per thousand cubic feet made	$.6345
Cost of manufacture per thousand cubic feet sold	.7173
Cost of distribution	.2700
Taxes	.0707
Renewals and replacements	.0300
Total cost	1.0880
Miscellaneous operating revenue	.0675
Net cost of gas delivered to consumer	$1.0205

The Master based his findings upon the operations for the year 1919, stating that the cost of gas in the year 1920, when the statistics were completed, would be in excess of the figure for 1919 (page 48). For example, the Master found that, as of the time of the close of the hearings in June, 1920, the cost of manufacture was 84.27 cents per thousand cubic feet of gas sold (Record, pages 39-40), as contrasted with 71.73 cents per thousand for 1919. The difference between the cost per thousand cubic feet made and the cost per thousand cubic feet sold is due to the so-called "unaccounted for gas", found in this case to be 11.03% of the gas manufactured (finding 23, page 39).

The average selling price of gas, including that sold to the City of New York at 75 cents per thousand cubic feet, was found to be 99.51 cents in 1919, leaving a net deficit to the complainant company below operating expenses in 1919 of 2.54 cents per thousand cubic feet, irrespective of any return upon any of the property used in its gas operations (finding 31, page 41).

The Master's Findings as to the Value of the Property used by the Appellee.

Following the ruling made by him in the *Consolidated Gas Company* case, the Special Master limited his finding of the value of the property of the complainant used by it in the gas business, upon which it was entitled to earn a fair return, to a minimum *actual investment* of the company in the property. The company was incorporated in July, 1904 (page 33), and acquired as of August 1, 1904, the property of the Newtown and Flushing

Gas Company, which had been prior to that date furnishing gas to the inhabitants of this territory (finding No. 2, page 33).

The Special Master found the company's total investment as of January 1, 1920, to be as follows:

Property acquired in 1904 and still in use.....	$670,488.86
Net additions between August 1, 1904, and Jan. 1, 1920.....	850,389.08
Working capital	135,000.00
Total.....	$1,655,877.94

(finding 34, page 41). No sum was deducted by the Master for accrued "theoretical depreciation" for reasons stated in his opinion (pages 41 and 57 *et seq.*). The Master further found upon evidence that the sum of $5 per thousand cubic feet of annual sales fairly represents the actual and necessary investment in property used and needed for manufacture, transmission and distribution of gas under the conditions under which the complainant operates (finding 35, page 41).

The fair and reasonable present market value of the land unimproved, included in the foregoing amount as of January 1, 1920, was at least $45,153.90 (finding 39, page 42).

The Master felt it unnecessary to make detailed findings of the complete present reproduction cost of the complainant's property (page 57) but at the request of the complainant he did make a finding *upon undisputed evidence* of the actual present cost as of January 1, 1920, to reproduce the plant, distributing system and other tangible property of

the company exclusive of working capital and undistributable structural costs. This he found to be $2,100,774.90 (finding No. 40, page 42). He also found that, to the foregoing sum there should be added amounts to cover organization and development expenses prior to construction, cost of financing, interest during construction, taxes during construction, engineering, superintendence and general contractors expense and profit, administrative, legal and miscellaneous expenses during construction and going value. He did not, however, make definite finding as to the amounts to be added for these items.

He further found (finding 42, page 43) that using unit prices of labor and materials prevailing January 1, 1914, the cost to reproduce the tangible property would be about one-half the above stated cost to reproduce as of January 1, 1920.

He found that the reasonable and proper rate of return upon the capital investment in the gas business of the company was not less than 8% per annum, amounting to $132,407.24, calculated upon the investment of the company as found by the Master (finding 45, page 44).

During the year 1919 the actual net deficit in operating expenses in the gas business of the company was $9,074.70, and the deficit below a reasonable return upon the complainant's investment, as found by the Master, amounted to $141,544.94 (finding 48, page 44).

The Final Decree.

In reviewing the report of the Special Master, ie District Judge made the following modifica- ons in operating costs:

1. He reduced the percentage of unaccounted for gas from 11.03% to 10% (page 111), thereby decreasing the cost of manufacture of gas per thousand cubic feet sold by .83 cents.

2. He eliminated the item "interest on unpaid taxes" (page 111).

3. He added to the income the amount of dividends received from investments in an insurance participation fund (page 112).

4. He increased the income from sales of all gas from the amount actually received of 99.51 cents per thousand cubic feet to $1.00 per thousand.

The result of these eliminations was a net cost production and distribution of $1.0129 per thou- nd cubic feet as against the Master's $1.0205 page 111), and as against an actual net cost of .0705 per thousand cubic feet. In view of the ct that the cost of production and distribution as in excess of the rate prescribed by the stat- e, thus showing an actual deficit in operating penses regardless of any return upon any amount investment, the court, while refraining from pressing any opinion upon the various conten- ons as to the rate base or the proper method valuing the property of the appellee, found at the actual cost of the tangible property of e complainant company, *concerning which there as no controversy on the part of the defendants*, as $1,130,497.08, which sum the Court found as

the *absolute minimum* of actual investment (page 115). The Court said:

> "If it were necessary to find the reproduction value the figure would be much greater. It is, however, sufficient, for the purpose of this case, that the court shall find said sum of $1,130,497.08 as the smallest amount upon which a return should be figured. All other findings touching the rate base have become immaterial to this case. At any rate of return from 8% down to 6%, the statutory rate of $1 is confiscatory on the evidence in this case."

The Principal Facts are Undisputed.

In spite of the long record made, the evidence presents no issue of *fact* upon any matter material to the decision of the case. No witness on behalf of the appellants contradicted any fact testified to by any witness of the appellee. The few disagreements presented by the testimony concern matters of *opinion:* for the most part they relate to the rule of law to be followed or as to the amount to be allowed in instances where the necessity of some allowance was admitted. We call attention at this point to the absence of controversy on some of these principal facts:

a. Inventory and reproduction cost.

The appellee introduced a detailed inventory of property in use by the appellee as of December 31, 1919, together with a detailed estimate of the cost of reproduction as of that date. This inventory and the notes accompanying it are printed as constituting a part of the testimony of the witness Miller beginning at page 559 of the printed record. This inventory, as well as other tabulated exhibits sub-

mitted by the appellee, was submitted to the appellants at least six months prior to the trial of the action and was by them carefully checked and the various items therein actually examined at the plant. This inventory showed a total cost to reproduce as of January 1, 1920, of $2,907,062, including working capital but exclusive of going value which the same witness testified would be at least $525,000 to $550,000 additional (page 814). The Special Master found the reproduction cost of the *tangible* property, exclusive of undistributed structural costs and of going value, would be at least $2,099,621, or nearly twice the actual cost of the property to the company, and more than twice if the other elements of value were added (page 57). The correctness of the items of this inventory and of the cost to reproduce was not disputed by the appellants.

b. The original cost.

Likewise as to the original cost of the property the complainant prepared an exhibit showing the date of acquisition and original cost so far as ascertainable of the items in exhibit 66 (exhibit 96, page 1605 *et seq.*). As the complainant company acquired its property on August 1, 1904, prior to which date records of original cost are not available, both parties agreed in assigning to the property acquired on that date and still in use on December 31, 1919, as representative of original cost and reasonable value as of August 1, 1904, the sum of $280,108 (Master's opinion, page 54; testimony of defendants' witness Hine, page 1178). Since August 1, 1904, net additions to tangible property cost $850,389.08, and as to this figure both parties are likewise in accord. These two figures make up

the amount of $1,130,497.08 found by the court as the "absolute minimum of actual investment" (page 115). Thus the actual cost to the appellee of the tangible property used by it in the gas business is agreed to by both parties.

c. As to the *quantity* of property actually and necessarily used by the company in the conduct of its gas business, there was likewise no dispute. All of the property of the company is actively in use as will be seen by reference to the map and photographs thereof contained in the record (pages 1480 *et seq.*).

d. The appellants admitted that the plant of the complainant company was well maintained in excellent operating condition (page 1181).

e. The appellants did not seek to controvert, by any witness called in their behalf to testify, the reasonableness of the cost of the principal materials such as coal, oil, cast iron pipe, etc., used in the manufacture and distribution of gas by the complainant, as shown by its records, vouchers and books of account introduced in evidence.

f. No one on behalf of the appellants testified that any item in the company's expenditures was extravagant, wasteful or unnecessary.

g. No one testified on behalf of the appellants that gas could be made in a plant such as the company's with the use of less coal, oil, labor, etc., than is actually being used as shown by the complainant's books and records, or with less than should be used under average conditions according

to the testimony of the appellee's expert (see complainant's exhibit 77, page 1596).

h. No one testified that the percentage of gas lost or unaccounted for shown by the company's record was too high or that any other company similarly situated can do better (the Special Master took the actual percentage of unaccounted-for for 1919 of 11.03% while the court accepted the testimony of the complainant's expert that 10% would be a reasonable amount of unaccounted-for gas).

i. No one testified in contradiction to the testimony of appellee's witness (page 880, *et seq.*) that the proper rate of return upon the investment in the gas property of the appellee should be not less than 8% per annum.

j. The defendants did not offer any controversy or question that the appellee owns, exercises and enjoys franchises and rights to maintain its pipes and conductors and to furnish gas through the streets, alleys and public places in the Third Ward of the Borough of Queens.

I.

The appellee's proof as to the cost of manufacturing and distributing gas, and the confiscatory effect of the operation of the statutory rate of one dollar per thousand cubic feet of gas, has not been controverted by the defendants.

(1) *The Defendants' Evidence.*

The appellants (defendants below) persist throughout their briefs in a contention that the appellee (complainant below) failed upon the trial to prove its operating expenses in the production and distribution of gas, the use of materials and the employment of labor in such production and distribution, the quantity of gas produced and distributed, and the quantity of gas delivered (*e. g.*, Brief of Appellant Wallace, pages 11-12).

If all the evidence presented in behalf of the complainant through various officers, employes and others not directly connected with the company, including the books of account, records and vouchers received as exhibits, were stricken from the record, there would still remain in the record, among the cumulative proofs introduced *by the defendants*, the testimony of the defendants' witness Benjamin Cohen, the accountant employed by the defendant Public Service Commission (Record, page 977), who made an exhaustive examination of the complainant's records and operations, in part, as follows (Record, pages 1155-1156):

> "Q. Is it your testimony that the true operating results of this company's business as you

gather it from their books is as shown on this Exhibit A-13?

A. It is my testimony that the result their books show is as shown on this Exhibit A-13, especially the net result down below.

Q. In other words, it is your statement that in 1909, according to their books, you found that they sold their gas at a profit of 40.53 cents per 1,000 cubic feet?

A. That is correct.

Q. And that it dropped to 39.45 in 1910?

A. That is right.

Q. And to 32.57 in 1911?

A. That is right.

Q. It went up a little in 1912, dropped again in 1913, dropped some more in 1914, went up a little bit in 1915, a little more in 1916, dropped very substantially in 1917 down to 19.83 cents?

A. That is correct.

Q. And your testimony is that in 1918, according to their books, they only made 10.18 cents per 1,000 cubic feet?

A. That is right.

Q. *And in 1919 they lost 7.33 cents on every thousand cubic feet of gas sold?*

Mr. Neumann: According to their books.

Q. According to their books?

A. *That is right.*

Q. *That is your analysis of their books?*

A. *That is right.*

Q. And your statement as to their operating results as reflected in their books?

A. That is correct."

* * * * *

The Master: Just one other question, so I will get this clear. In your table 4-B, you show year ending December 31, 1919, a total sale of various classes, municipal, street lighting, buildings, prepayments, commercial meters of 336,241.4 thousand cubic feet, is that right?

The Witness: That is correct.

Q. So that your testimony is in substance that for the year 1918 their net profit was $33,600 at about 10 cents per cubic foot?

A. The net profits for 1918 were $33,350.56.

The Master: Where is that figure, where did you read that figure from?

The Witness: On Schedule 4-B.

Mr. Neumann: In that connection I would like to call the Court's attention to the fact that we contend that the item underneath that column totalling approximately $2,300, should be added to that amount, so that the total operating income of that year would be $35,000 odd.

Q. Taking for the year 1918, Exhibit A-13, the excess of revenues over deductions, the 10.18 is arrived at by dividing the amount shown on Exhibit A-12, $33,350.56, by the total quantity of gas sold. Is that correct?

A. That is correct.

Q. And the same for 1919?

A. The same for 1919.

Q. And the other years as well?

A. That is correct.

Mr. Neumann: In connection with 1919 I would like to call the Court's attention to——

Mr. Goetz: I do not like to be interrupted in this way, it is hard to follow these figures.

Mr. Neuman: In the year 1919, among the items that we claim should be included in the year 1919, but which have not been included in the computation is this amount of $15,518.73 for the rate case.

The Master: I understand those things, Mr. Neumann. Let Mr. Goetz make his record. I have this thing pretty clearly in my mind."

And we may note, parenthetically, that the question of the inclusion of the rate proceeding expenses in the 1919 operating expenses was about the only

one raised by the defendants by way
of the complainant's operating figures.

uld still be left in the record the evidence
by the defendants in the testimony of
Record, pages 1181-1182) that the com-
plant was "well maintained", and the
defendants' exhibits:

15

A-52. Monthly Statistical Report for 1919 showing cubic feet of gas made, sent out, etc. for 1918 and 1919 (Record, p. 1795; Orig. p. 2875).

A-53. From Report to Public Service Commission for 1919 entitled "Details of Gas Manufacturing Expenses at each Station" (Record, p. 1795; Orig. p. 2876).

A-54. From Annual Report to Public Service Commission for 1918, entitled "Details of Gas Manufacturing Expenses at each Station" (Record, p. 1795; Orig. p. 2878).

The foregoing exhibits introduced by the defendants relate wholly or principally to details of operation and of revenues and expenses. The Master referred to this fact in the following statement (Record, page 47):

> "The defendants also offered in evidence data showing the operating results, the unit quantities of materials used, the unit costs thereof, and other information as to the revenues and expenses of the complainant company during the years from 1901 to 1920. Various of the underlying records of 1918 and prior years were also produced in Court at the instance of the defendants, and various of the entries in the books of the complainant and its predecessor company were placed in evidence by the defendants."

In addition, there were numerous exhibits introduced by the defendants corroborating the complainant's evidence as to charges and credits to its capital accounts.

The following statement made in the appellant Wallace's brief (page 3), is absolutely correct:

> "Appellants submitted data showing the operating results, the unit quantities of mate-

> rials used, the unit costs thereof, and other information as to revenues and expenses of respondent during the years from 1906 to 1920."

The findings of the Master and of the Court below as to the revenues and expenses of the appellee and the details of its operations and business, during the period taken by the Court as a test, are confirmed in all essential details by the evidence introduced by the defendants.

(2) *The Controlling Conditions of the Appellee's Operations.*

Ex-Justice Hughes, in the *Brooklyn Borough Gas Company* case (17 N. Y. State Dept. R. 81), expressed the sound rule by which the compensation to which this complainant is entitled must be gauged when he said:

> "A public service corporation is entitled to be reasonably compensated for its service and the *actual cost* of its operations must *always* be taken into consideration in determining whether or not it receives a fair compensation above the cost."

The distinguished jurist was there dealing with the contention of the appellants reiterated in this and companion cases that the *average* cost, over a number of years, not the *actual* current cost, of operation was the measure of compensation under a rate the constitutionality of which was attacked.

The appellee possesses a single manufacturing plant, at which it produces the gas necessary for the requirements of its consumers. There is no other source of gas available either to the complainant or to its consumers. In this respect the appel-

lee's situation is different from that of certain other companies in the Consolidated Transfer-of-Gas System in the Boroughs of Manhattan and The Bronx and in Long Island City, which can draw gas from several manufacturing plants. It is, therefore, the conditions at the appellee's plant, and not those at some other plant, which control its operating results.

(3) *The Uncontroverted Proof Submitted by the Appellee.*

The appellee called several witnesses to testify concerning details and cost of its operations and business. Mr. Spear, its Vice-President and General Manager, who has been in the public utility business for many years and has had extensive training and experience both on the technical side and on the executive side of the business (Record, pages 178-180); Mr. Woods, one of the most eminent gas engineers in the country, in direct charge of the manufacturing and holder plants of the companies of the Consolidated Gas System, and supervising and consulting engineer of the complainant (Record, pages 398-402); Mr. Morrison, the superintendent of the company's plant, who has had long experience in the gas business (Record, pages 569-571); Mr. Raynor, the Company's Secretary in charge of its accounting system (Record, pages 262-263), and Mr. Foy, the company's bookkeeper (Record, pages 287-288).

It also called Mr. Addicks, a distinguished engineer and Vice-President of the Consolidated Gas Company, who handles the purchases of coal and oil for companies in the system, including the appellee (Record, pages 317-319); Mr. Gawtry,

an executive of a financial institution who was formerly a Vice-President of the Consolidated Gas Company and in charge of coal purchases for the same companies (Record, pages 524-526); and Colonel Miller, an eminent engineer with a long and varied experience in construction and operation of gas plants and apparatus, who had examined and appraised the complainant's plant and distributing system (Record, pages 241-249).

The appellants failed to call any witness who would controvert the testimony of the complainant's witnesses concerning the reasonableness of the cost of the principal materials, such as coal, oil, cast iron pipe, etc., used in the manufacture or distribution of gas by the complainant; or who would testify that the company's expenditures were extravagant, or its methods of operation were improper or negligent, or its employees were incompetent, or that gas could be made in a plant such as the complainant's with the use of less coal, oil, labor, etc., than was actually used under the actual conditions.

It is most significant that the defendants called as a witness Mr. Hine, who had been Chief Gas Engineer of the defendant Public Service Commission from 1911 to 1919, who had made many investigations of gas service and service standards (Record, pages 1170-1171, 1174), who claimed a miscellaneous experience in the operation of gas plants (Record, page 1172), and who had examined the complainant's plant and had "done a great deal of miscellaneous work in connection with that company" (Record, page 1176), but that the defendants asked him no question whatever which might elicit any criticism of the methods and

efficiency of operation of the appellee or of the condition or maintenance of its property. No evidence was presented that during its whole existence the defendant Public Service Commission had at any time had occasion to require changes in the plant, apparatus or methods of operation of the complainant. Nor was the Chief Gas Engineer of the defendant Public Service Commission who succeeded Mr. Hine, or any member of his staff, called as a witness to give testimony in criticism of the practical operation of the complainant's plant or the conduct of its business.

It is respectfully submitted that the failure of the defendants to call these witnesses or interrogate them, justifies the strongest inference that the evidence presented in behalf of the complainant in these respects could not be impeached.

Cost of Production and Distribution.

It is contended by the appellants (Appellant Newton's Brief, pages 40, 61; Appellant Wallace's Brief, pages 97-98), that, if the findings of the Court as to the reasonable and necessary operating expenses were reduced by certain amounts as claimed by the appellants, there could be derived a net income for the year 1919—the test period used by the Court—in an amount sufficient to indicate a substantial return upon the complainant's property.

The following is a comparative table of the revenues and expenses for the year 1919 as claimed by the appellee (Exhibits 64 and 65; Record, pages 1569, 1573; Orig. pp. 2496, 2500), as found by the Master (Record, pages 38-40), and as allowed by the Court (Record, pages 111-112):

MPARATIVE STATEMENT OF AMOUNTS CLAIMED BY COMPANY AND AMOUNTS ALLOWED BY THE MASTER AND THE COURT.

REVENUES AND EXPENSES OF THE GAS BUSINESS PER THOUSAND CUBIC FEET OF GAS SOLD.

	CLAIMED BY THE COMPANY		ALLOWED BY THE MASTER		
	1919 Actual Ex. 64	As of May 1921 Exs. 77 and 90	1919	As of July 1920	ALLOWED BY THE COURT 1919
st of Production.....	$ .7173	$ .7127	$ .7173	$ .8427	$ .7090
st of Distribution.....	.3200	.3982	.2700		.2707
newals and Replacements.	.0300	.0300	.0300		.0300
xes	.0707	.0708	.0707		.0707
tal Cost of Gas Sold.....	$1.1380	$1.2117	$1.0880		$1.0804
scellaneous Operating Revenue	.0675	.0675	.0675		.0675
t Expenses.....	$1.0705	$1.1442	$1.0205		$1.0129
come from Sales.....	.3951	.3951	.3951		1.0000
Net Loss.....	$ .0754	$ .1491	$ .0254		$ .0129

The deductions made by the Master from the actual operating expenses for 1919 are as follows:

Defensive Emergency Service (Record, page 52)	$747.46
Rate Proceeding Expenses (Record, page 52)	15,518.73
The further deductions from operating expenses or credits made by the Court below are as follows:	
Interest on Insurance Participation Certificates (page 112).....	57.58
Interest on Unpaid Taxes (pages 111, 117)	233.71
Total	$16,557.48

The Court reduced the "unaccounted-for gas" from the actual of 11.03 per cent. accepted by the

Master to 10 per cent., reducing the cost of gas production from 71.73 cents to 70.90 cents per thousand cubic feet of gas sold, or by .83 cents per thousand cubic feet of gas sold.

The Court increased the income from sales of all gas from the amount actually received of 99.51 cents per thousand cubic feet of gas sold to $1.00, in order to treat the sales of gas to the City at the statutory rate of 75 cents per thousand on a parity with the sales of gas to private consumers at the rate of $1.00 per thousand, thereby adding an unrealized income of .49 cents per thousand cubic feet of gas sold.

The Court, in its opinion, stated that—

> "In that spirit of caution, the Court may eliminate for the purposes of the case some contentions which might be successfully pressed in a rate case pure and simple" (Record, page 109).
>
> "In arriving at this figure, it will be appreciated that I have stripped the constituent items down to their lowest minimum" (Record, page 112).

The Legislature of New York State, in prescribing a rate of one dollar for gas service in the territory served by the appellee, from and after the year 1910, at the same time that it prescribed a rate of 80 cents for gas service in other metropolitan territory (Chapter 125, Laws of 1906), recognized the wide differences between the necessary costs of operating in the suburban and sparsely settled territory of the complainant and those in other areas in the City of New York in which there is a congestion of population and a concentration of in-

dustries. Nothing has since transpired to remove or reduce the relative differences in cost of operation or to warrant a change in the differential. On the contrary, many factors have contributed to the necessity of increasing the differential. Obviously, if the 80 cent rate is not compensatory and is unconstitutional as to gas service in territory in which the 80 cent rate was originally prescribed, the dollar rate cannot possibly be remunerative and compensatory in the territory served by the complainant.

The briefs in behalf of the appellants make reference to the fact that in other water gas plants such as that of the Consolidated Gas Company, the smallest of which is many times larger than the plant of the complainant, there are not required the use of certain quantities of material and certain operating expenses, per thousand cubic feet of gas made or sold, as in the case of the complainant. But, in the case of a small company with a small plant, there are certain units in the cost of manufacture that are higher, and the legislature recognized that fact when it created a differential between the rate applicable to the complainant's territory and the rate applicable to the Consolidated Gas Company's territory.

Principal Exhibits of the Appellee as to Operations.

It may perhaps be of convenience to have indicated the relatively small number of exhibits which disclose in concise and graphic form the details of the complainant's operations and properties as established by the evidence, and in which exhibits

are shown the details of any items as to which controversy may arise upon the argument:

EXHIBIT 47: Tinted map showing real property owned and used by the complainant (Record, p. 1480; Orig. p. 2389).

EXHIBIT 48: A series of 17 photographs showing the buildings, holders, etc., of the complainant's plant (Record, p. 1480; Orig. p. 2390).

EXHIBIT 58: Sheets showing the rates of pay per hour in all departments of the company, from 1911 to 1920 (Record, p. 1567; Orig. p. 2489).

EXHIBIT 59: Statement showing the unit prices paid for generator and boiler coal and for gas oil, from 1911 to 1920 (Record, p. 1567; Orig. p. 2491).

EXHIBITS 60, 61 AND 62: Comparative statements showing the unit prices paid for materials other than coal and oil, from 1914 to 1920 (Record, pp. 1567, 1568; Orig. pp. 2492-2494).

EXHIBIT 64: Detailed statement of the unit costs of the production and distribution of gas during 1919, prepared by Mr. Teele, a certified public accountant of high standing and wide experience (Record, p. 1569; Orig. p. 2496).

EXHIBIT 65: Detailed statement of the revenues and expenses of the complainant's gas business during 1919; also prepared by Mr. Teele (Record, p. 1573; Orig. p. 2500).

EXHIBIT 66 FOR IDENTIFICATION: Detailed inventory and appraisal of all the complainant's property; received as Colonel Alten S. Miller's testimony and printed in full at pages 559 *et seq.* of the Record.

EXHIBIT 77: Table prepared by George E. Woods, a gas engineer of many years' experience, showing the unit operating costs under the conditions obtaining in the complainant's plant (Record, p. 1596; Orig. p. 2534).

EXHIBIT 96: Detailed schedules showing the cost to the complainant of the property acquired by it in 1904 and still in use, and the cost of property added since that time (less withdrawals) (Record, p. 1605; Orig. p. 2563).

EXHIBITS 112 AND 113: Map and statement showing land purchased by the complainant and the cost thereof (Record, p. 1719; Orig. pp. 2706, 2707).

EXHIBIT 115: Statement comparing the cost of production and distribution, and the complainant's revenues and expenses, during the first five months of 1920 with the same details for the first five months of 1919 (Record, p. 1727; Orig. p. 2722).

Inspection of the list of Exhibits will disclose that all coal and oil vouchers, oil contracts, bills for other materials, payrolls, tax bills, manufacturing records, books of account, and other supporting data, and the like, for 1919 and five months of 1920, were placed in evidence, together with the pertinent regulatory orders of the defendant Public Service Commission.

Cost of Production.

After reviewing the record and hearing argument the Court below disposed of the defendants' (appellants' in this Court) exceptions (Record, pages 110-111, as follows):

> "The Cost of Production.—Some attack has been made in respect of the cost of oil. An examination of the record shows clearly that the oil accounts were carefully kept and checked. Most of the slight errors during the course of a month were corrected and the most generous acceptance of the contentions of the defendants would result in a variance of a few gallons which, translated into money, would be equivalent to a fraction so negligible as to amount to an infinitesimal part of a mill.
>
> The cost of other materials and of labor is attacked not on the basis of evidence adduced but, as it were, on general principles. The suggestion is that certain increased costs are suspicious. Yet there is nothing suspicious in the testimony, and it is a matter of common knowledge that during the year 1919 the cost of materials such as are here concerned, and of labor, rose materially in this and other industries. An examination of the testimony, including the exhibits, leads readily to the conclusion that the Special Master was right in his figures. It was made entirely plain that these costs, in the main, were greater in the first five months of 1920 than in 1919. The point of the inquiry in respect of 1920 was to ascertain whether there was any likelihood that the cost of 1919 had decreased or would decrease and no such hope was realized."

The Master described the scope of the proofs offered by the complainant and by the defendants, and the examination and analysis made of the complainant's summaries of proof by the defendants'

counsel, accountants and engineers (Record, pages 47, 48-49), and he summarized his conclusions as to the unit quantities of material and labor used by the appellee as follows (Record, page 50):

> "The first question to determine is whether the quantities used by the complainant company as they appear from the books and records of the company are correct and set forth a reasonable and necessary use of materials and of labor, or whether there has been a waste of gas-making material and unnecessary use of labor forces and the books do not accurately reflect the quantities actually needed and used. I have analyzed these figures in the light of the defendants' proofs and also of the sworn testimony given by Mr. Woods, an operating engineer of wide experience produced by the complainant company, whose testimony has not been directly attacked or contradicted by any witness. Except for some minor variances when contrasted with the 1919 operating results, such as his estimate of 'unaccounted-for' gas at 10 per cent. (the record for 1919 shows 11.93 per cent.), his slight under-estimate of the required boiler fuel, and the slight difference as to the figures given by him for the gas oil required, it may be said that the results shown in the operating records closely accord with the sworn expert opinion of Mr. Woods, and are confirmed by his judgment as to the results which might reasonably be looked for and secured."

Location of Plant.

The appellee owns and uses a plant for the manufacture and distribution of carbureted water gas, located at Myrtle Avenue and Farrington Street, in the former Village of Flushing, in the Third Ward of the Borough of Queens, New York City (Finding No. 6; Record, page 34). The plant

has been and is "maintained in excellent operating condition" and is "in as high a state of efficiency as if new" (Finding No. 32; Record, p. 41; see, also, testimony of Spear, Record, pages 738-739; Woods, Record, page 435; Miller, Record, page 656; Hine, Record, page 1181).

Without any evidence whatever in the record to support it, the contention is made for the first time by the appellant Wallace (Brief, page 15) that, if the complainant's plant were located on the waterfront, which is one-half mile distant from the present site of the plant, "the fair cost of unloading coal from barge direct to coal pits would not exceed ten cents per ton", and it is, therefore, argued that the cost to the complainant of coal handling from the point of unloading to the coal pile is excessive. This contention was not suggested by any exception to the Master's report or by any assignment of error in this Court. The only evidence on this question in the record negatives this claim. Mr. Woods testified (Record, page 432):

> "The amount of money involved, however, in the transportation would not justify the abandonment of the plant for the purpose of putting it on the water; the amount expended for the purpose of putting it on the waterfront would not justify any changing from the present location of the plant."

The appellants' criticism as to coal-handling was confined to the lack of direct rail connection to its plant. In assignment of error No. 35 (Record, page 133) the appellants asserted that—

> "The cost of handling coal would be very much less if complainant company were to construct sidings from the railroad company to the plant which would result in a saving of at least fifty cents per ton."

The same suggestion is made in the appellants' Thirteenth exception to the Master's findings (Record, page 69).

This subject was referred to upon the cross-examination of the witness Woods (Record, pages 432-433), from which it appeared that the plant is some 200 feet from the railroad tracks and that a railroad siding cannot be installed unless and until the acquisition by the complainant of sufficient intervening land to enable it to avail itself of this facility. As shown by Exhibit 47 (Record, p. 1480; Orig. p. 2389), the complainant's land does not at any point extend to the right of way of the railroad from which it is urged such a siding should be built. Obviously, any saving in the cost of coal effected by the installation of such a siding would be to a substantial extent offset by the additional investment required, which would result in additional carrying charges, increased maintenance expense and more property upon which a fair return would have to be allowed, but for which the appellants make no provision in the calculation of the necessary return.

Generator Fuel and Boiler Fuel.

The Master found (Finding 13, Record, page 37):

> "13. In the manufacture of water-gas under the conditions obtaining in a plant such as that of the complainant, there is required the use, per thousand cubic feet of gas made, of approximately 37 pounds of anthracite coal of the grade of coal being supplied in recent years, or its fuel equivalent, of which approximately 34 pounds are used in the generators, and approximately three pounds are used

under the boilers. In addition, there is also required to be used under the boilers approximately nineteen pounds of bituminous boiler coal or its equivalent in water-gas tar (one gallon of such tar weighing nine pounds and one pound of tar having a fuel value of about 1.7 pounds of the grade of boiler fuel now and recently supplied). The plant and operating conditions of the complainant company require the use of slightly more boiler fuel per thousand cubic feet of gas made than would be required if it were not under the necessity of compressing a portion of the gas sent out in order to reach the distant community of Douglaston and Douglas Manor, hereinbefore referred to."

The appellant Newton's contention as to the use by the complainant in 1919 of an excessive amount of coal is made only in respect to boiler fuel, for which a deduction is claimed from operating expenses of $5,367.21 or 1.4 cents per thousand made (Brief, page 58). The appellant Wallace, however, contends that the cost of both generator fuel and boiler fuel is too high, because of the method of unloading coal, of the lack of proof by the gas-makers personally as to the quantities used by them, and of an alleged use of an excessive quantity of coal (Brief, pages 13-48).

In so far as the contention of the defendants is based upon their "purely negative attitude" toward all the evidence presented by the complainant, which ostrich-like, shuns not only the complainant's but also the defendants' evidence of the details of operation, it cannot be taken seriously; and we shall discuss it only from the standpoint of any possible merit.

Mr. Woods said that average operations in such a plant would require the use in the generators, per thousand cubic feet of gas made, of 37 pounds of anthracite generator coal, "of which about 34 pounds would be used in the generator and three pounds would be fine screenings which could be used for boiler purposes" (Record, page 410). In 1917 there was used in the generator 37.17 pounds (Ex. 100, Record, p. 1023; Annual Rept. Ex. A-53, Record, p. 1795; Orig. p. 2881); in 1918, 34.69 pounds (Annual Rept. Ex. A-32, Record, p. 1780; Orig. p. 2842); in 1919, 34.59 pounds (Ex. A-29, Record, p. 1776; Orig. p. 2839); during five months of 1920, 36.57 pounds (Ex. 115, Record, p. 1727; Orig. p. 2722).

As to boiler fuel, the Master found that 19 pounds of bituminous boiler coal or its equivalent in water-gas tar was required in addition to 3 pounds of anthracite coal (Finding No. 13, Record, page 37).

Mr. Woods said that at least 22 pounds of boiler coal or its equivalent in tar would be required. In 1919, 16 pounds of coal and 0.7 gallons of tar were used—the total equivalent to 26.71 pounds of coal. In 1918, 16.69 pounds of coal and 0.5 gallons of tar were used—the total equivalent to 24.34 pounds of coal. In 1917, 16.3 pounds of coal and about the same quantity of tar—a total equivalent to about 24 pounds of coal. During five months of 1920, 15.65 pounds of coal were used and 0.6 gallons of tar,—a total equivalent to 24.83 pounds of coal (*Ibid*).

The appellants would limit the allowance for boiler fuel to the average over the years 1913 to 1918, inclusive (Appellant Newton's Brief, page 58; Appellant Wallace's Brief, page 47). How could gas have been produced in 1919 if the gas

makers had been limited to an average of materials used in past years when they required under present conditions a greater quantity? This average, of course, included nothing by way of additional boiler fuel which has been necessary since November, 1919, when service on the Douglaston Extension was opened, for the purpose of pumping at high pressure a portion of the gas sent out in order to reach that distant community (Record, page 745).

Counsel for the appellants confuse the testimony of Mr. Woods and the findings of the Master as to the quantity of boiler fuel ordinarily required, and the quantity actually used, because they overlooked the fact that Woods, in his Exhibit 77 (Record, p. 1596; Orig. p. 2534) specifically calls attention to the fact that over and above the ordinary requirements of coal for boiler fuel there is required *additional* boiler fuel on account of steam used for high pressure transmission in supplying Douglaston extension under order of Public Service Commission for the First District.

The appellants would find an inconsistency between Mr. Woods' testimony in the present case and his testimony in the *Consolidated Gas Company* case where he testified concerning the quantities of material and labor required in the operation of a plant producing an average of ten million cubic feet of gas a day (for this plant he used an average of one million cubic feet of gas per day), and where he testified to 14 pounds of boiler fuel. Mr. Woods explained (Record, pages 429, 430) that the capacity of the plant would have something to do with it, shutting it down (not operating the full twenty-four hours), keeping it warm in the winter time, and the radiation loss would

be greater with that plant than it would be with a larger plant. He further testified that it takes eight more pounds in the production of only a million cubic feet of water gas than it does in the production of ten million cubic feet of water gas (Record, page 431). In the plants of the Consolidated Company there were operated ten-, eleven- and twelve-foot machines, while the complainant used seven-foot six and eight-foot six machines (Record, page 431). As a matter of fact, on the Consolidated System as high as 17 pounds of boiler fuel had been actually used (Record, page 477).

The criticism of the inadequacy of the receipt and disposition of coal (Appellant Wallace's Brief, pages 20-28, 34-38) is dispelled by the quotations from the testimony as set forth in that portion of the brief.

Gas Oil.

The Master found 4.2 gallons of gas oil were necessary in the plant of the complainant in manufacture per thousand cubic feet of gas (Finding No. 11, p. 36):

> "11. In the manufacture of water-gas of the statutory standard of 22 candle power, under the conditions obtaining in a plant such as that of the complainant, there is required the use, per thousand cubic feet of gas made, of approximately 4.2 gallons of gas oil of the gravity and quality now being supplied to the complainant, and the complainant did, in fact, use on the average 4.19 gallons per thousand cubic feet of gas made, during the year 1919."

But the Master included in the operating expenses for 1919 the use of only 4.19 gallons of gas oil.

In a plant such as that of this complainant, not making gas throughout the year on a twenty-four hour basis, Mr. Woods said not less than 4.2 gallons of oil would be required, on the average, per thousand cubic feet of gas made.

The statistical exhibits show in 1917, this company used 4.43 gallons; in 1918, 4.26 gallons; in 1919, 4.19 gallons; during five months of 1920, 4.38 gallons per thousand cubic feet of gas made.

No contention is made by the appellant Newton in his brief that the allowance was unreasonable. While the Master held 4.2 gallons to be a reasonable quantity, the amount taken by the Master in the cost of production included only 4.19 gallons per thousand cubic feet of gas made. The allowance by the Master of the actual figure which is somewhat less than Woods' deemed reasonable on the average, does not justify the criticism by the appellant Wallace (Appellant Wallace's Brief, page 48). There is no inconsistency, as is sought to be attributed to Mr. Woods, between his testimony in the Consolidated Gas case where he testified to 4.1 gallons, and the testimony in this case to 4.2 gallons, in view of the dissimilarity of operating conditions. Mr. Woods testified that, in order to secure the statutory 22-candle power standard on the distributing system, there would be required the production of gas of from 23 to 26 candle power, in a plant of this kind and for this district, as the fact that the mains are smaller and the distance is greater tends to reduce the candle power on the system and to require a higher candle power at the works in order to maintain the statutory candle power throughout the distributing system (Record, pages 415-416). Mr. Woods also testified that, in shut-

ting down a plant, as would be necessary in the case of the appellee's plant, there would be somewhat less efficiency as compared with a larger plant which was in continuous operation, and that the oil efficiency would also be diminished by a poor quality of coal (Record, page 434).

The Corporation Counsel's brief in behalf of the appellant Wallace, who took no active part in the trial, endeavors to exaggerate the importance of alleged discrepancies as to gas oil in the so-called "daily record of manufacture" kept at the complainant's works, which, however, did not at all enter into the charges in the *cost* of gas oil used which were made in the complainant's books of account and which were in turn summarized by Mr. Teele in his Exhibit 64 (Appellant Wallace's Brief, pages 62-67), and which are, therefore, in no way consequential to the results in the case. The oil vouchers and the New York Produce Exchange certificates of quantities and qualities are all in evidence (Exs. 63 and 87). The company *pays for* what it receives as shown by these certificates, and these quantities are fully confirmed, as we shall show. The Teele exhibits, in so far as they relate to gas oil as an element in the cost of manufacture, present the total amount of money actually paid for gas oil and the total number of gallons actually used, ascertained by taking the inventoried quantity on hand at the beginning of the year, and adding to it the number of gallons received, as shown by the vouchers and New York Produce Exchange certificates, and deducting the quantity measured as on hand at the end of the year. For a complete understanding of the method by which oil is received into the tanks and afterwards accounted for daily, reference is made to the testimony of Mr. Morrison,

Superintendent of the Works, at pages 573 *et seq.* of the Record.

When a boat-load of oil is received, it is pumped into the tanks at the works through a pipe line and the tanks are measured before and after the pumping to determine the quantity of oil received from the barge. This measuring is accomplished by means of a scale on the outside of the tank, and by a plum-bob. The amount of oil used in the course of a day's manufacture is determined by measurement of the tanks and verified by meter measurement at the gas machines (Record, page 574). It is possible, therefore, to determine every day the amount of oil used for the quantity of gas produced, and that is done daily.

The first alleged discrepancy claimed by the defendants was with reference to the daily record of manufacture for January, 1919, introduced in evidence as Defendant's Exhibit "A". It will be observed that the column headed "Oil Used"—which shows a total in red ink of 146,964, indicates the amount, in gallons, for each day of the month. If the figures in this column are added up, the total will appear to be 149,964, as was brought out on the cross-examination of Mr. Morrison (Record, pages 578-579). This would appear to be a clerical error calling for explanation until we observe in what method the total amount of oil used is derived and how the supposed error occurred. In the column immediately to the left of the column marked "Oil Used" is a column marked "Oil on Hand 7 A. M."; the amount of oil used each day is determined by subtracting the amount of oil on hand in the tanks as ascertained by measurement from the amount on hand the previous day at

7 A. M. Thus the amount of oil used on the first day of the month will be found to be the difference between 68,610 gallons and 63,604 gallons, the amount on hand at 7 A. M. on the first and second days respectively. On the 18th an error in subtraction of 1,000 gallons was made by the clerk, and another error of 2,000 on the 22nd, resulting in two misstatements in the "Oil Used" column, amounting to 3,000 gallons. If the column headed "Oil Used" had then been added up correctly and the total, 149,964, carried down to the recapitulation in the lower right-hand column of the sheet, this error would then have found its way into the books. *This was not done, however,*—the total 149,964 not being derived by adding the column of oil used each day, but by taking the stock on hand at the beginning, 68,010 gallons, adding to it the amount bought during the month, 131,618 gallons, producing a total oil to account for during the month of 192,628, and subtracting therefrom the amount on hand on the last day, namely, 52,664 gallons, which produced 146,964 gallons (see computations in the lower right hand corner of the sheet). This amount was then inserted as the total oil used. *The total so inserted is the correct total,* and the clerical errors occurring during the month were thus entirely eliminated by the practice of proving the stock account and did not find their way into the books of account, which contain only the correct totals.

But even if this error of 3,000 gallons had found its way into the final computations, what effect would it have had upon the result for the month? As shown by Defendants' Exhibit "A" (no item of which was in any way challenged except the oil figures now under discussion), the total make of

gas during that month was 32,903,000. An error of 3,000 gallons of oil, therefore, would have amounted to .09 of a gallon per thousand cubic feet. Taking this at the rate of 6.7¢ per gallon (Finding No. 12) would produce six mills per thousand cubic feet as the total effect of the clerical error pointed out by the defendants. But even this error was eliminated at the end of the month, and did not find its way into the books of account.

Instead of reflecting upon the accuracy of the books of account and records of the complainant company, the occurrence of this trivial error and its discovery and elimination before it found its way into the books of account and records of the complainant company, rather emphasizes their accuracy and reliability, for out of the hundreds and thousands of entries upon these twelve sheets for the year 1919, this was *the only clerical error* pointed out by the defendants, after weeks and months of careful checking by their accountants. And, as we have shown, this error was absorbed and completely wiped out at the end of the month by the method used of determining the oil used by means of the inventory of the stock on hand at the beginning and the end of the month.

Another alleged error is upon the sheet for February, 1919 (Defendants' Exhibit "B", Record, page 583). Here it appears that on February 3rd record was made of the receipt of 118,311 gallons which was later stricken out, and the amount 118,639 gallons inserted, a difference of 228 gallons. The subtractions and additions from day to day were correctly computed upon the amount first set down. The total stock account for the month was

correctly worked out after it had been determined what the exact amount of oil received amounted to by means of the certified invoice rendered by the Oil Company and certified to by the inspectors of the Produce Exchange. Gas oil varies in volume considerably according to its temperature, so that the oil measured by the oil company's inspectors at the time it is shipped may be of a different temperature and different volume when it is received at the works, but no allowance is made for this until the bill is received from the Standard Oil Company (Record, pages 601-604).

The next alleged discrepancy pointed out was upon the June sheet, marked Defendants' Exhibit "C", in which it appears at the bottom of the column "Oil Used" that an addition of 500 gallons was made to the total amount shown in that column. This was done "to make up some of the discrepancies that appear in the oil received and the oil that was billed for" (Record, pages 584-585). There was a 500 gallon discrepancy, apparently due to difference in temperature at the time the oil was measured, which appeared in the invoices received from the Oil Company, not necessarily in the same month. The same thing occurred in the month of November, when 2,000 gallons were added to the oil to cover apparent discrepancies in the invoices, and again in December, 1,000 gallons (Record, pages 585-586). So, also, as was brought out on cross examination of this witness, the December figures were changed to show that the amount for which the company was billed and compelled to pay was *less* than the amount its records indicated it had received.

All of these records which have been referred to, perhaps at unnecessary length, prove conclusively, not that the daily records are unreliable, but that they are carefully revised and corrected so as to eliminate not only all clerical errors, but also to take account of the changing volume of the gas oil and to have the daily records exactly correspond to the amount of oil for which the company is billed, and which it is required to pay for.

In addition to the foregoing, there are in evidence all of the oil vouchers for the year 1919 and for 1920, and attached to them, the certificates of the Produce Exchange as to quantities, and also, when necessary, memoranda of credits allowed by the Standard Oil Company for oil not received (Complainant's Exhibit 88, Record, page 617).

The alleged claim that the December records show 193,000 gallons, whereas the capacity of the tanks had been testified to be only 180,000 falls to the ground upon the testimony of Mr. Spear, General Manager of the complainant company (Record, page 617), stating that with the tanks full and the oil line extending from the tanks down to the dock, the capacity would be 193,000 or 194,000 gallons. The working capacity of the tanks up to the inlet pipe is about 180,000 gallons, but sometimes, if the cargo is a large one, the tanks are filled above the inlet pipe.

Thus a discrepancy of 300 or 400 or 500 gallons discovered upon the unloading of the barge would not be considered by the officers of the company until the bill was received (Record, page 637). A

larger discrepancy amounting to, say, several thousand gallons, would be taken up at once with the Standard Oil Company and a credit secured. This was done in January, February and March, 1920, where as will appear from the reports of manufacture offered in evidence by the complainant, credits amounting to some 8,000 gallons were allowed by the Standard Oil Company on account of the barge pulling out from the dock before it had completely unloaded (Record, page 636). The point of all this is that it is not the *daily* record of manufacture with respect to oil and coal and similar materials used in the manufacture of gas, but the inventory at the beginning and end of the month, which determines the quantities used and the quantities which shall be reported to the company and recorded in its permanent books. If the daily record of manufacture does not check with the inventory at the end of the month, the inventory governs and the daily record is corrected to conform therewith (Record, page 683).

We believe that the foregoing will completely dispel any shadow of doubt cast upon these records by the defendants. The total differences pointed out amount to 6,500 gallons, assuming (which is not the fact) that they found their way into the books of account. The total number of gallons of oil used during the year 1919, according to the twelve manufacturing reports in evidence was 1,590,785; of this, 6,500 gallons represents 4/10ths of 1%, a variation so infinitesimal as to be worthy of not a moment's regard. Translated into dollars at the rate of 6.7¢ per gallon, 6,500 gallons would make a difference in the annual expense for oil of $435.50, a mere trifle out of the $107,192.16 expended for gas oil

during that year, according to the books of account (Record, Exhibit 65).

Additional confirmation of the entire correctness of the records of manufacture in their final form is furnished by the testimony of Mr. Arthur W. Teele, one of the country's foremost accountants, who prepared Exhibits 64 and 65 from the complainant's books. With respect to oil, he testified (Record, pages 751-752):

> "I went back to the original invoices and the original entries of the inventory at the beginning of the year."
>
> * * * * *
>
> "The total aggregate of the quantity reported by the daily work reports agrees with the quantities of oil on hand at the beginning of the year plus the oil purchased during the year less the oil on hand at the end of the year."

And again, at Record, page 752, he elaborates the process of his checking as follows:

> "They are reported by the works manufacturer as having been consumed. The works manufacturer reports that he had on hand a certain quantity of oil at the beginning of the year, the vouchers duly approved and endorsed as showing the quantities of oil received during the year were submitted to me and examined by me, and starting with the admitted quantities of oil on hand at the beginning of the year and adding thereto the amount of oil acknowledged by the responsible authorities as having been received during the year, less the quantity of oil which that same authority admits as having on hand at the end of the year, I arrived at a quantity of oil which is to be accounted for, and that quantity of oil reported by the manufacturing department as having been used during the year, and I, there-

fore, have taken it for granted, or I have taken that quantity of oil as being the quantity of oil that has been used."

The appellee could scarcely have a better verification of the accuracy of its accounting method, and even of the substantial accuracy of the works records kept by the operating men, than the fact that these defendants, with a large force of accountants, devoting many weeks to this company's books and records, were able, with the most painstaking and critical scrutiny, to find only a few slight errors in arithmetic affecting only the works sheet for the day upon which it was made, but having absolutely no effect whatsoever upon the final result.

Uncontroverted Proof of the Reasonableness of the Cost of Gas Oil and Coal

The record affords no support for a contention that the prices paid by complainant for gas oil are or have been excessive.

This contention is now advanced in the brief of the Appellant Wallace (pages 48-62), who took no active part in the trial. The brief in behalf of the appellant Attorney-General does not refer to this point. In fact, the defendants called no witness who would testify that *at or about the time* the gas oil requirements of the complainant were contracted for, any dependable producer of gas oil was willing to enter into a *term* contract for the supply of gas oil in the quantity and of the quality required by the complainant, at a price lower than that fixed for the gas oil contracted for, to be supplied to the complainant's plant.

The requirements of the appellee for gas oil are included in the contract made by the Consolidated Gas Company to cover the requirements of itself and its affiliated companies. When the complainant requires a cargo of oil, it arranges direct with the Standard Oil Company of New Jersey for delivery of the same pursuant to the terms of the contract negotiated by Mr. Addicks (Record, pages 202 *et seq.*). Payment therefor is made directly by the complainant to the oil company.

The gas oil contracts for 1919 and 1920 were produced and received in evidence as Exhibits 71, 72, 73 and 74, and the subject of the prices at which oil could be secured was exhaustively covered by the testimony of Mr. Addicks, Vice-President of the Consolidated Gas Company, who has charge of the negotiations of oil contracts (Record, pages 319 *et seq.*), and also in certain respects by Mr. Spear, general manager of the complainant (Record, pages 215-217). There is also in evidence as Exhibit 59 a statement of the prices paid by the complainant for oil for a series of years and also comparative costs of coal and oil from 1914 to 1920, all of which are supported by the original vouchers showing the actual payment made by the company (Exhibit 63; Record, page 219; Exhibit 87, Record, page 676). No testimony or evidence of any kind was offered by the defendants tending in any way to show that oil could have been purchased for a less amount. On the contrary it was testified, and the Master found that the trend of oil prices at the time of the trial was sharply upward and that it would not be possible to secure a new contract at the expiration of the 1920 contract, or any supply of gas oil, at a price less than 10 cents per gallon (Finding No. 12; Record, page 37).

The good faith and the propriety of the oil contracts and the reasonableness of the prices therein contained, were sharply litigated upon the trial of *Consolidated Gas Company* vs. *Newton, et al.*, now before this Court, and the good faith of the Consolidated Gas Company's officers in negotiating the contract and the reasonableness of the prices paid, were attacked from every possible angle. After a thorough review of the testimony upon this subject, Judge Learned Hand, who rendered the final decision in that case on August 4, 1920, found that the prices paid by the Consolidated Gas Company pursuant to its contracts were paid in good faith and were reasonable (*Consolidated Gas Co.* v. *Newton*, 267 Fed. 231). He said (page 246):

> "It is clear beyond peradventure that, based upon New York prices, the charge is utterly baseless that the Company was paying more than the market, so far as there may be said to have been a market."

He added (page 247):

> "The charge of a sinister connection between the Company and the Standard Oil Company of New Jersey appears therefore to be without the slightest evidence, * * * I have no doubt that this [6.8¢ per gallon] was an honest price made in a genuine effort to do the best possible and it is certainly less than could have been got later in that year (1919); it is a most conservative figure for reckoning costs for the future, so far as can now be seen, and I accept it."

For a fuller discussion of this phase of the case, we refer to the Appellee's Brief on the Facts (Docket No. 257, Brief, Point III, pp. 145 *et seq.*).

The New York and Queens Gas Company has greatly benefited by its ability to secure gas oil under the contracts made by the Consolidated Gas Company; indeed, when the Consolidated Gas Company took over the arrangements for the supply of gas oil to the complainant, it succeeded in effecting a large financial saving to the complainant (Record, p. 346).

The purchase of coal, like oil, is made pursuant to contracts negotiated by officers of the Consolidated Gas Company for itself and affiliated companies (testimony of Mr. Addicks, Record, page 328 *et seq.*; testimony of Mr. Gawtry, Record, page 525 *et seq.*), whenever contracts for coal can be obtained. Recently such contracts have been unobtainable on the yearly basis, and purchases have commonly had to be made in the market. The unit prices paid for coal during a period of six years are shown in Exhibit 59, and the correctness of these figures is further verified by the various vouchers supporting the same (Exhibit 63), the coal contract under which coal was purchased during a portion of the period under consideration (Exhibit 80), and the coal vouchers for the first five months of 1920 (Exhibit 86). The Master's findings as to the cost of coal and other fuel (Findings 14, 15 and 16; Record, pages 37-38) are amply supported by this evidence, and there is no evidence by any defendant in any way contradicting the fact of the payment of such prices nor their reasonableness, nor tending in any way to show that coal could have been procured in any quantity whatsoever for any less price. The finding as to the recent cost of anthracite generator coal, $11.50 per gross ton at the works (Finding No. 14)

is supported by the testimony of Mr. Spear given on one of the last days of the trial (Record, page 1462).

Gas-Making Labor.

The Master found (Finding No. 20, Record, page 38) that there is necessary, in the manufacture of water gas, the employment of gas-making labor, and that in 1918, under the prices and the rates of pay then in force, the cost of gas-making labor in the complainant's plant was 4.67 cents, and in 1919, 6.31 cents per thousand cubic feet of gas made, and as of the then present time, the testimony showed that under average operations and the rates of pay and prices then in force, this item cost at least the sum shown for the year 1919.

The finding of the Master and of the Court concerning the amount to be allowed for gas-making labor is not challenged in the appellant Newton's brief. The brief of the appellant Wallace, however, contends that the proof of the employment of labor and the compensation paid to labor is not sufficient (Appellant Wallace's Brief, pages 67-90), and also that there is some inconsistency between Woods' figures to which he testified in the Consolidated case and the figures in this case. The figures in the Consolidated case were based upon a lower wage rate than was paid at the time Mr. Woods testified to in this case, and furthermore, Mr. Woods said (Record, page 442):

"A. * * * For instance, you have a gas maker who makes a million feet a day, in three shifts they would make a million feet for each of these machines, and in a larger plant, where they had larger machines, in a plant capable of handling larger machines that same gas-

maker would make three million, so for the gas-maker himself it would be three times as much as in the large plant where they have these large individual units. You could not afford to put up individual units of that kind in a plant like Flushing, you would have to rebuild the plant entirely in order to handle the proposition.

Q. Four cents more to make gas in a million cubic-foot company than in a ten million company.

Mr. Ransom: I object to that. He is comparing September, 1919, with April, 1920, whereas the proof in the Consolidated case showed two increases in pay after the September figure.

The Master: Objection overruled.

Mr. Ransom: Exception.

A. The gas-manufacturing labor in a plant such as exists there would be infinitely more than in a plant making ten million cubic feet a day."

Works Repairs and Materials.

The actual expenditure by the complainant in 1919 for repair labor was $10,101.99, or 2.66 cents per thousand cubic feet, and for repair material $17,843.55, or 4.69 cents per thousand, a total of $27,945.54, or 7.35 cents per thousand (Exhibit No. 61, Record, p. 1569; Orig. pp. 2496, 2497).

In his computation of the cost of gas made, the Master allowed the actual expenditures by the complainant for 1919 (Finding No. 21, Record, pages 38-39). This allowance is criticized by the appellants (Appellant Newton's Brief, pages 41-49; Appellant Wallace's Brief, pages 90-92). In appellant Newton's brief it is suggested that the allowance of the average for the five years from 1914 to 1918

would result in a deduction from the actual cost of 5.88 cents per thousand (Brief, pages 47-49), whereas in appellant Wallace's brief it is suggested with some leniency that the amount which should be deducted from the actual cost is 3.85 cents, reducing it to 3.05 cents per thousand (Brief, page 92). Thus, the appellant Newton would deduct from the actual cost $19,770.01 (Brief, page 61), but the appellant Wallace would deduct only $12,945.29 (Brief, page 92).

We do not perceive how the unavoidable repairs in a plant can be made upon any theoretical basis of averages. Had the Public Service Commission issued an order to the company to make the repairs, would it have been a tenable answer that the order requires the expenditure of a greater sum than the average spent during a period of ten years? The fact that the complainant's repairs cost during 1919 substantially more than they did, on the average, during the four or five years preceding, is in no way surprising. The appellants have failed to take into account considerations which above all others stand out in this record: The rates of pay for the labor and the prices of the materials used in the maintenance and repair of a gas plant, distributing system, and appurtenant property have advanced sharply and continuously since 1914. In 1919, these elements of cost were in many cases more than 100% greater than they were in 1914, and they were still advancing (Complainant's Exhibits 58, 60, 61; also Spear, Record, pages 1438, 1459-1460). There was also a lessening of the efficiency of labor—more men and more hours were required on an equivalent repair job. It would be strange indeed, and a matter really calling for explanation, if during a period of rising prices the unit cost of repairs remained

stationary. If the same repairs were made on the average in each year, we should expect the cost per unit as well as the total cost to increase with rising price levels; if they did not so increase, the inference to be drawn therefrom would be that the company was neglecting its repairs. The fact that the 1919 cost of repairs was about double that of 1915, if it requires any inference at all, tends to show that the company in 1919 was keeping its plants in at least as good repair as it was in 1915.

Cost of Distribution and Other General Expenses.

The actual cost of distribution claimed by the complainant for the year 1919 was $107,597.82 or 32 cents per thousand cubic feet of gas sold (Complainant's Exhibit 64, Record, p. 1569; Orig. p. 2496), exclusive of renewals and replacements (3 cents per thousand) and taxes and interest thereon (7.07 cents per thousand). The Master allowed approximately 27 cents (Record, page 52), instead of 32 cents as claimed. He eliminated $15,518.73 charged in 1919 to the account of the present rate case, and $747.46 charged for defensive emergency service, or a total of $16,266.19, which, deducted from the actual expenses of $107,597.82, gave $91,331.63 (Record, page 52).

In reviewing the report of the Master, the District Judge further eliminated the item of Interest on Unpaid Taxes, credited the item of Interest on Insurance Participation certificates, reduced the amount of unaccounted for, and raised the income from sales of gas to a rate of $1.00 per thousand for all gas sold (Record, pages 111-112).

Repairs to Mains, Services and Meters.

In the actual cost of distribution there was included the sum of $11,077.65 for repairs to gas mains, services and meters (Exhibit 64, Record, p. 1569; Orig. p. 2496). This item was not varied by the Master or by the Court.

The appellant Newton contends that there should be deducted from the actual cost $4,962.54, or 1.4 cents per thousand cubic feet, for the reason that the actual cost in 1919 exceeded by that much the *average* for the years from 1914 to 1918. Obviously this argument disregards the increase in cost of materials and labor during that period (Exhibits 58, 60 and 61, Record, p. 1567; Orig. pp. 2489, 2492, 2493), and would place the service to the consumers upon a theoretical basis rather than upon the basis of actual conditions as they exist.

Uncollectible Bills.

In Complainant's Exhibit 64 (Record, p. 1569; Orig. p. 2496) there was included the sum of $1,349.02 for uncollectible bills which the Master included in his allowances (Finding No. 28, page 40) and which the Court did not disturb. This item is challenged by the appellants (Appellant Newton's Brief, page 55; Appellant Wallace's Brief, page 97).

In Defendants' Exhibit A-12 (Record, p. 1761; Orig. p. 2811) prepared by defendants' accountant Cohen, entitled "Gas Operating Revenues and Revenue Deductions", 1909-1913, 1914-1919, there is included, for each year, under the title "Operating Revenue Deductions" the item of uncollectible

bills. Defendants' accountant assumed to make various adjustments conformably to the contentions of the defendants, as will be noted by the several items with which he attempts to surcharge the complainant. Nevertheless, he treated uncollectible bills as an "Operating Revenue Deduction" and not as a charge against Profit and Loss.

Uncollectible bills are classified in the category of operating expenses in the Uniform System of Accounts prescribed by the Public Service Commission (Exhibit 49, Record, p. 1481; Orig. p. 2407; Account G-870, p. 1536).

Every recognized accounting procedure for ascertaining net income sanctions the inclusion of bad debts in operating expenses, and the income tax laws invariably provide for it. The deposit which may be exacted in accordance with Section 63 of the New York Transportation Corporations Law does not provide for a sufficient protection to a gas company, as most of the uncollectible bills are due to consumption in excess of deposits collected.

Interest on Consumers' Deposits.

Included in the expenses set forth in Complainant's Exhibit 64 (Record, page 1569; Orig. p. 2496), is an item for interest on consumers' deposits, amounting to $1,621.10. This item was allowed by the Master (Finding No. 28, Record, page 40).

The payment of this interest is a requirement imposed upon the complainant by the New York Transportation Corporations Law, Section 63. These deposits are not advance payments for gas.

The paring of operating costs should not be extended by the Court to payments required by law. If these payments of interest are not proper operating charges, then the Master and the Court should have eliminated from miscellaneous operating revenue the interest received on bank balances and other items of interest (Exhibit 64, Record, p. 1572; Orig. pp. 2498, 2499).

Deductions made by the Master and the Court Below from the Complainant's Actual Operating Costs resulting in the Allowance of an insufficient amount for Operating Expenses.

If any revision of the Distribution and Other General Expenses of the complainant as found by the Court were at all warranted, the revision should be in favor of the complainant, for it should be borne in mind that both the Master and the Court made deductions from the actual expenses of operation, which are justifiable only as a measure of rigorous elimination of items susceptible of real controversy.

Defensive Emergency Service—Rate Proceeding Expenses.

The Master eliminated altogether the defensive emergency service outlay of $747.46, amounting to 0.22 cents per thousand cubic feet of gas sold, and the whole of the item of $15,518.73, amounting to 4.62 cents per thousand cubic feet sold, covering the services of accountants and engineers paid for in 1919 in connection with the present rate case (Record, page 52). These deducted items amounted to substantially 5 cents per thousand cubic feet and resulted in a finding that only 27 cents per thou-

sand cubic feet of gas should be allowed on account of what is known as "cost to distribute", as compared with the 32 cents actually expended in 1919, and the sum of 39.82 cents being expended in May, 1920, and thereafter (Exhibit 90).

The propriety of the inclusion in operating expenses, and of the allowance in a computation of the cost of service for which compensation should be made through adequate rates of (*a*) unavoidable charges on account of the expenses of the suit, and (*b*) highly necessary expenditures on account of defensive emergency service to meet exigencies, has been discussed in principle by counsel for this appellee in their Brief on The Facts in the case of the *Consolidated Gas Company* v. *Newton* (Docket No. 257, Brief, pages 124, 126-129), and we shall not here reiterate the discussion.

Upon final hearing of this case, the Court below approved the findings of the Master which made the deductions to which we have referred, and, in *addition*, the Court further pared the operating expenses and increased the income. The Court credited the expenses with income from investments made by the complainants in insurance participation certificates and deducted from the expenses interest accrued on unpaid taxes—both insignificant items but for the rule or principle. The Court also reduced the "unaccounted for" gas, thereby reducing the cost of gas per thousand cubic feet sold (discussed under Point VI, pp. 76 *et seq.* of this Brief), and increased the rate by which the income from sales of gas to the municipality at the statutory rate of 75 cents per thousand should be calculated.

The appellee has not filed any assignment of error, but brings these deductions to this Court's attention to indicate the attitude of the Court below in resolving really doubtful questions in the favor of the defendants below.

Interest on Unpaid Taxes.

The taxes in question upon which interest was accrued in the expense account of the complainant were actually levied by the taxing authorities of the State. The Attorney-General was not willing at the trial to bind the State not to collect these taxes. Under the circumstances, until the taxes are legally cancelled, the interest on them during the period of contest must be provided for and becomes a proper operating expense.

Income from Insurance Participation

The Court below said (Record, page 112) that

> "Whether or not the amount of income from insurance participation should be charged as an expense [credited against expenses] is a debatable question and for the purpose solely of this decision, I resolve the doubt in favor of the defendants."

It is respectfully submitted that the income from the fire insurance participation certificates should not be credited against the company's expenses for making and distributing gas. These certificates represented an investment made by the complainant in an insurance fund and are no different from any other investment which the complainant might make. If the income is credited to operating expenses, the investment itself should have been added to capital account, but it was not so treated by the Master or by the Court.

Loss Due to Selling Gas to the City of New York at the Statutory Rate of 75 Cents.

The Court below held that, in determining whether the statutory rate of one dollar to private consumers was confiscatory, the loss resulting to the complainant from the sale of gas to the City of New York at the rate prescribed by Chapter 736 of the Laws of 1905, of 75 cents per thousand, should not be considered. This view is contrary to the ruling by Judge Hand in *Consolidated Gas Co.* v. *Newton* (267 Fed. 231), by Judge Hough in *Kings County Lighting Co.* v. *Niron* (268 Fed. Rep. 243), and by Ex-Justice Hughes in *Brooklyn Borough Gas Co.* v. *Public Service Commission* (17 N. Y. State Dept. Repts. 81).

Of the total of 336,241,100 cubic feet of gas sold by the New York and Queens Gas Company during the year 1919, 1,554,000 cubic feet were sold to the City of New York (Exhibit 65, Record, p. 1574; Orig. p. 2502), or less than one-third of one per cent. of the total. The effect of the sale of the gas to the City of New York at the lower statutory rate was to reduce the total income by .49 cents per thousand cubic feet of gas sold.

In the prior suit of the *Consolidated Gas Company* (212 U. S. 19), both the eighty-cent rate for general consumers and the seventy-five cent rate for the municipality were attacked by the company. The Supreme Court (212 U. S. 19, 54) refused to consider separately the seventy-five cent rate or to annul that rate because seventy-five cents would be a confiscatory rate if applied generally. Separately considered, the seventy-five cent rate was confiscatory, but the test of the confisca-

ory effects of the eighty-cent rate was based by he Court upon the combined revenues of all gas old as contrasted with the combined expenses of naking and selling all of the gas sold, and upon he return on all of the property.

The same view was adopted and acted upon by ex-Justice Hughes as referee in the *Brooklyn Borough Gas Company* (17 N. Y. State Dept. Reports, 14), where the gas sold to the City amounted to our per cent. of the company's total sales. The listinguished referee found the eighty-cent rate and ninety-five cent rate both unremunerative, but nevertheless, upheld the seventy-five cent rate for as furnished to the municipality. He tested the ighty cent rate and the ninety-five cent rate by omparing the company's total revenues, including hat from gas sold to the City, with the company's otal expenses, and figured the return on the whole nvestment. While sustaining the complaint as o the rate applicable to private consumers, he dismissed it as to the rate applicable to the municipal ervice, basing his decision upon the authority of *Willcox* vs. *Consolidated Gas Company*, 212 U. S. 9, 54, and *Northern Pacific Railway Company* vs. *North Dakota*, 236 U. S. 585, 601 (17 State Dep. Rep. 114).

II.

The contingency reserve set up on the appellee's books in 1915, 1916 and 1917, is no justification for the complainant to make and distribute gas without adequate compensation for the service, or for the confiscation of the appellee's property.

Certain general phases of this question are discussed by counsel for the appellee in the appellee's brief on the facts in the case of the *Consolidated Gas Co. of New York* vs. *Newton*, Docket No. 257, at pages 461 to 470. Under this point, counsel for the appellee will confine their argument to specific statements made in the appellant's briefs in this case (Appellant Newton's Brief, Point III, pages 33-40).

During three years only the appellee set aside out of the net income or surplus distributable by it after paying the bare operating expenses, and not by way of a charge against operating expenses (See Deft.'s Exs. A-12 and 13 from which it appears that the amounts were not included in "operating revenue deductions") the following sums:

1915	$11,970.52
1916	12,615.51
1917	14,308.81
Total	$38,894.84

which it credited to a reserve account entitled "Contingency" (Defts.' Ex. A-16; Record, page

1761; Orig., page 2815). In 1915 it also credited to this account, and transferred from an account, which in accordance with the Commission's nomenclature, was entitled "Accrued Amortization of Capital", the sum of $62,254.82. At the end of the year 1918 the total credits to the account "Contingency" were, therefore, $101,149.66. No further credits have been made to the account since then either during the year 1919 or 1920 (Defts.' Ex. A-16, Record, page 1761, Orig., page 2815).

It is contended by the appellants (Appellant Newton's Brief, Point III, pages 33-40) that the "respondent has accumulated a *fund* amounting to $101,149.66 as a contingency reserve. The statute should not be declared confiscatory until this fund is exhausted".

There is not a scrap of evidence to show that this reserve is in the form of a "fund". If it were, the fund could be identified. The defendants themselves have proved that no such reserve exists in the form of a "fund". On December 31, 1919, according to the transcript from the balance sheet of the complainant put in evidence by the defendants (Defts.' Ex. A-9), the complainant had on hand $41,637.88 in cash, which was nearly three times as much as it had on hand on the corresponding days in the two prior years, but it also had bills payable amounting to $490,000, and accounts payable amounting to $60,270.64, the largest in its history and several times more than it had on corresponding days in a number of previous years. The complainant was "head over heels" in debt. Of course, the complainant had and has no "fund" available; the credit to the reserve is merely a book

figure and cannot be identified with any particular asset.

Although the resolution adopted by the appellee's Board of Directors on November 16, 1915 (Record, page 719), might justify the inference that the amount of the credit to the reserve should be included in operating expenses, in fact, as appears from defendants' exhibits, no part of the credits to this reserve during 1915, 1916 and 1917, was included in the calculation of operating expenses (Exs. A-12 and A-13, Record, page 1761; Orig., pages 2811, 2812).

The direct credits to the contingency reserve for the years 1915, 1916 and 1917 amounted to $38,891.84, which, added to the balance transferred from the accrued amortization reserve to this reserve, made the total credit $101,119.66. During the year 1919, the Master found, after making various eliminations for the purposes of the rate case only, the deficit below a reasonable return on the minimum actual investment of the appellee was $141,544.94 (Record, page 44), which included an operating loss of $9,074.70. According to the defendants' exhibits and the testimony of their accountant Cohen (Record, pages 1155-1156), the appellee's net profits for 1918 were $33,350.56, which obviously was at least $100,000 less than a fair return even upon the minimum actual investment as found by the Master. Thus, even if the principle contended for by the appellants had any merit, the reserve was wiped out before the advent of the test period adopted by the Court and no vestige was left by the end of 1919 when the appellee was facing operating costs higher than those of 1919.

An altogether unjustifiable and strained construction is sought by the appellants to be placed upon the resolution authorizing the creation of the Contingency reserve (Record, page 719). This reserve was "for the purpose of providing for contingencies or casualties such as those caused by fire, flood, earthquake, insurrection or riot, *or any other hazards*". Counsel for the appellant Newton contends that the phrase "any other hazards" should be given such an interpretation as would make it embrace the operating losses which have been suffered by this appellee due to no other cause than the arbitrary limitation of the rate to be charged for the service and the resulting disparity between the income from such a rate and the operating costs and a fair return upon the property. Under the rule of *ejusdem generis*, the phrase "any other hazards" may not be interpreted to describe things not of the same kind as the things specifically enumerated. Can it be said, therefore, that the arbitrary rate limitation is a contingency or casualty like fire, flood, earthquake, insurrection or riot? Is the imposition of an arbitrary rate limitation upon a public utility a "hazard" in any sense? If the doctrine contended for by the appellants were sustained, it would mean that, instead of the business of a public utility being affected with a *public interest*, it would be subjected to a *confiscation hazard*.

It is contended by the appellants (Appellant Newton's Brief, page 39) that the appellee should "not thus enrich itself at the expense of *the* consumers. The only burden which the consumers must bear is to see to it that they pay a rate which will give the company a fair return", etc. In view

of the powers vested in the Public Service Commission since 1907 to regulate the rates of the complainant, and the reserve power in the legislature to do likewise, and the statutory prohibition against the charging of anything more than a reasonable rate, it can not be assumed that the complainant has earned, during the years when it set aside, out of distributable net income, the credits to the contingency reserve, anything more than a reasonable return, or that it has charged unreasonable rates (*Municipal Gas Co. vs. Public Service Commission*, 225 N. Y. 89, 98). If it be the obligation of the consumers, as the appellant Newton contends, to pay a rate which would give the company a fair return, what justification is there for the *present-day* consumers refusing to pay a rate which will yield a fair return simply because *past-day* consumers *may* have paid a rate which yielded more than a fair return? The books of account of the complainant placed in evidence, and the tabulations made therefrom by the defendants, show that the complainant, the New York and Queens Gas Company, has never paid any dividend. Even if the former-day consumers had discharged their obligation to pay a fair rate, certainly that does not entitle present-day consumers to enjoy free or inadequately compensated service.

It is suggested by the appellants that the "contingent fund" (which, as a *fund*, does not exist) could have been capitalized by the issuance of securities by the complainant and the proceeds utilized to make up the operating losses. Of course, the proceeds would have been too soon exhausted to stem the tide of accumulating losses, but the suggestion is so amateurish a financial scheme as

to be humorous. A company whose property, including this "contingent fund", has been confiscated by the effect of a rate limitation, which has been unable to pay its fixed charges except by borrowing them, and which does not earn enough to pay the interest on its outstanding bonds, is, under the financial scheme of the appellants, to issue new securities and create additional fixed charges which it cannot meet under the statutory rate. Unless the complainant is expected to practice the grossest fraud upon those who would be enticed into making the investment in such new securities, who would put up the money for such an investment?

Finally, the appellants' brief (Appellant Newton's brief, pages 39-40) says that, without assuming "that the fair value of the company's property and the rate of return it was entitled to enjoy was correctly set forth by the learned judge below, it will be readily seen that this fund [contingency reserve] was large enough to carry the company over a period of several years without changing the statutory rate and without any income for making and selling gas for such period". By what arithmetical process such a result is obtained is, we respectfully submit, beyond intelligent comprehension.

III.

The Period Proper for a Test.

The same point is made in this case as in the *Consolidated Gas Company* case (No. 257 submitted herewith) that the period during which the rate was shown to have been confiscatory was insufficient, and that the appellee, over a period of years, derived a fair return upon its investment on the average.

The District Judge found himself "in full accord" with the views of Judge Cardozo of the New York Court of Appeals, and of Judges Hand and Hough in the cases submitted herewith (Record, page 110) and sustained the Master.

As to the general point involved here, a full discussion will be found under Point VII of Appellee's General Brief in the *Consolidated Gas Company* case, No. 257, and repetition here is unnecessary.

We may add, however, that the proofs showed, and the Special Master found, the complete operating costs of the Appellee for the years 1918, showed, and the Special Master found, the complete operating costs of the Appellee for the years 1918, 1919, and for the first five months of the year 1920. Surely confiscation for more than two full years is sufficient to call for judicial relief.

Rather elaborate tables have been made up by the appellants showing their claims as to the returns earned by the complainant during the years 1906 to 1919, upon the basis of which they contend

that the appellee has earned on the average a fair return (*e. g.*, Appellant Newton's Brief, Point I, pages 8-13; Point VII, pages 88-98).

Discussion as to the average return over a number of years is academic, since the current operating expenses of the complainant and the compensation to be made to the investors for the use of the complainant's property, cannot be defrayed by any calculation of averages for a prior period. The complainant cannot be deemed to have earned more than a fair return during the prior years in view of the power vested in the Public Service Commission, and also reserved in the Legislature, and of the statutory prohibition against charging more than a reasonable rate (*Municipal Gas Co. v. Public Service Commission*, 225 N. Y. 89, 98).

Moreover, the process used by the appellants to compute the value of the property for the years 1906 to 1919 was soundly rejected by the Master and by the Court below. It is stated in Appellant Newton's brief, page 10, that "Mr. Hine showed that the *fair value* of respondent's property does not exceed the following average amounts for these years." In point of fact, Mr. Hine did not attempt to testify to the "fair value" of the complainant's property and none of his tables are labelled "fair value". His Ex. 109 (which is referred to in Appellant Wallace's brief, page 10, as the basis of their claims as to the fair value of the complainant's property) bears the caption "Average Fixed Capital, Including Engineering, 1904-1919 (Exclusive of Land)" (Record, page 1877, Original, page 3059). Hine testified merely to calculations of original cost and "accrued theoretical depreciation", and the latter he deducted from the original cost. The absurd

values for the years 1906 to 1918 are arrived at by the appellants in the same manner as was their value for 1919, that is, by the deduction of enormous sums for "accrued theoretical depreciation", by either starvation or no allowances for working capital, organization, interest, taxes, engineering, etc., and by a failure to make any allowance whatever for franchises or going value; or, in other words, by a process of decimation. We do not believe that a basis such as this will commend itself to this Court any more than it has to the various judges in the Second Circuit before whom similar contentions were urged by the defendant public authorities in the various rate cases.

IV.

No error was committed by the Special Master and District Court in admitting the books of account.

The methods of proof as to operating expenses, pursued in the present case, were thus described by the Special Master:

> "The books of account, vouchers, manufacturing records, works reports, and the like, of the complainant company were placed at the disposal of the defendants, more than six months in advance of the beginning of the trial before me, along with copies of the principal statistical exhibits which the complainant proposed to offer in evidence upon the trial, and were carefully and thoroughly examined and analyzed by counsel for the defendants, their accountants and engineers" (Record, p. 48).

> "For the purpose of proving the quantity and cost of materials, labor and the like, as well as the revenues and expenses of its gas business, the complainant company presented to me, as previously to the accountants and experts of the defendants, all of its invoices and vouchers for coal, oil and other materials and supplies purchased, together with its various payrolls, works reports, records of manufacture, office reports, and the like, together with its books of account in which the items of expenditure and revenue shown by these underlying records had been entered. All of this data covered the year 1919 and the first five months of the year 1920. To the invoices for coal, oil and other materials, were attached the certificates evidencing the receipt of the quantities indicated, and to the oil invoices were also attached the certificates of the New York Produce Exchange inspectors attesting the quantity and quality of the oil delivered. The

public accountants employed by the complainant had checked these vouchers and records to the books and certified to the accuracy of both. There was also submitted to me the sworn testimony of qualified witnesses as to the actual cost of oil, coal and other materials from 1906 down to the present time, including the years 1919 and 1920, and the sworn testimony of experienced operating engineers as to the quantities of coal, oil and other materials, and of the labor, actually required for the manufacture of gas and the wages necessarily paid to labor during this period, including 1919 and the first five months of 1920.

"The defendants also offered in evidence data showing the operating results, the unit quantities of materials used, the unit costs thereof, and other information as to the revenues and expenses of the complainant company during the years from 1906 to 1920. Various of the underlying records of 1918 and prior years were also produced in Court at the instance of the defendants, and various of the entries in the books of the complainant and its predecessor company were placed in evidence by the defendants" (Record, p. 47).

The brief of the Attorney-General (page 106) contains a specification of error in the admission of the books of account on the ground that "the books were incorrectly kept and that the underlying data on which the books were based were incorrect and that there existed errors in the underlying data which had found their way into the books". The point is not argued and the particular errors in the underlying data claimed to have found their way into the books of account are not specified. It would seem that the Attorney-General places no great reliance upon this assignment of error. As both the Master and the District Court have found that the books were correctly kept and correctly reflect the trans-

actions of the company, it seems perhaps unnecessary to speculate as to what "inaccuracies" might be deemed referred to by the Attorney-General's innuendo.

The brief of the Corporation Counsel of the City of New York submitted on behalf of the appellant Wallace, makes some point of the admission of the books of account (page 182), but he may find excuse for the inaccuracies of his statements as to the books, in the fact that the Corporation Counsel took no part in the trial before the Special Master, the defendant District Attorney being represented by other outside counsel who took little or no part in the proceedings. He was not represented by the Corporation Counsel until after the appeal had been taken to this Court.

Thus on page 187 the point is made that the books are not books of original entry and that not one witness was called to prove the underlying data on which the entries in the books rest. Had the writer of this brief read the record with sufficient care he would have found that the correctness of the entries in the books were proved: (1) by the Vice-President, who is in general charge of the system and has been for many years (page 180); (2) by the Secretary of the company, who is in direct charge of all the books of account (page 262 *et seq.*), and who testified that there is but one set of books (page 267), and that they are correctly kept (page 268); (3) by the bookkeeper, who since May 18, 1918, has made all entries in the general books of account (page 287); (4) by the introduction of all the vouchers underlying the books of account for 1919 (page 271) and for 1920 (page 616); (5) by the Superintendent of

the works (page 569), who is on the job twenty-four hours a day (page 571), and who produced in court all of the daily records of manufacture for both years (page 576), and who was cross-examined at great length upon the operations at the works and the method of recording the transaction of the manufacturing department (pages 576-609, inclusive); and also by the witness Teele, an expert accountant of high standing (page 220 *et seq.*), who testified to a complete and thorough examination of the books of account and all of the underlying data from which he made tabulations showing the results of the company's operations. The attitude of the defendants upon the trial is illustrated by the remark of the Master on page 619, provoked by the continual objection to all testimony of any kind relating to the transactions of the company:

> "The Master: When I take the pay rolls you object because there should be some man to swear to it, and when we have a man to swear to it, you say I should take the pay rolls."

Not only were the records of manufacture underlying the books of account produced in court but as many of them as were desired were received in evidence on behalf of the defendants (defendants' exhibits C to H, record, page 1729 *et seq.*).

It would seem that the only further proof in substantiation of the books of account that might have been offered would have been to bring the gas plant into court and to have it operated in the presence of the Master.

The District Judge who reviewed the findings of the Master found sound ground for resting his approval of the admission of the books of account

(Record, page 110) upon the opinions of Judge Hand in the *Consolidated Gas Company* case (No. 257) and of Judge Hough in the *Kings County Lighting Company* case (No. 295, submitted contemporaneously herewith). In the Appellee's Brief on the Facts in the *Consolidated Gas Company* case argued contemporaneously herewith, the admissibility of the books of account of the Consolidated Gas Company is fully dealt with (see Points IV and V thereof; pages 155 to 238), and we respectfully refer to that discussion.

V.

The appellants' claim of a deficiency in candle power is without merit and is not supported by the evidence.

The answer of the defendant, Public Service Commission contains a separate defense (page 16), alleging that the complainant has "persistently, continuously, knowingly and wilfully failed to abide by and comply with the foregoing provisions of Chapter 125 of the Laws of 1906, in that it has persistently, continuously, knowingly and wilfully failed during the years of 1918 to date and prior thereto, to furnish gas having an illuminating power of not less than twenty-two sperm candles", etc.; as a consequence of which the complainant does not come into a court of equity with clean hands, and should be dismissed.

Under Point X, p. 289 *et seq.* of the Appellee's Brief upon the Facts, in *Newton* v. *Consolidated Gas Company*, No. 257, submitted simultaneously herewith, we have discussed at length the merits of such a plea in an equity action involving rates for gas. It is not necessary to repeat at length in this brief what has been there said. It is sufficient to point out that in not one of the many gas cases recently tried in the City of New York in the Federal Courts, nor in any case in any court of last resort in the country, has it been held that a public utility corporation must suffer the unlimited confiscation of its property through inadequate rates, because it may have at isolated intervals in the past occasionally fallen slightly below

the standard quality fixed by law for the commodity furnished by it.

But in this case the defendants failed even more dismally than they failed in the *Consolidated Gas Company* case in their efforts to prove the failure on the part of the appellee to conform to the statutory standard of candle power. The statement of the complainant's expert, Mr. Woods, that the making of 23½ candle power gas at the works would ensure on the average 22 candle power on the district (page 456) was not disputed, nor was it disputed that the company habitually made gas of 23½ or greater candle power at its works. Indeed the statistics of the company offered in evidence by the defendants themselves amply proved that fact.

The test sheets showing candle power tests made by employes of the City of New York for a period of four years were tabulated and placed in evidence (page 1796), and show substantial compliance by the complainant with the requirement of the statute. During the year 1919 the period for which complete returns were in evidence, and the period used by the Special Master as the basis of his findings, there were but two months when the average for the month showed below 22, and on one occasion the deficiency was .14 of a candle power (page 1833) and on the other .4 of a candle power (Record, page 1841).

The number of "violations", that is, the number of times when the City tester in his judgment concluded that the candle power of the gas he was then examining was slightly less than 22, is immaterial. A large part of the so-called violations referred to by the defendants represent only slight fluctuations of a few hundredths of a candle power below 22.

At such times as the candle power appears to have gone substantially below 22, the record is ample in explanation in the fact that the mains of the company are for many miles exposed in salt meadows to the action of cold weather and to the action of severe winter weather encountered during the period in question.

Not only are the mains of the company exposed for a number of miles upon the salt meadows of Long Island (page 623), but there are also many points in the district in which, owing to change of grade of railroads in the streets under the jurisdiction of defendant Public Service Commission, the mains are continuously exposed to the effect of cold air, and there is even such an exposed main within 100 feet of the testing station of the city, so that the gas tested may frequently come from a main which has been directly exposed to the effect of the most severe winter weather (page 624).

The effect of cold upon the candle power of gas was admitted by the city tester, who also admitted that candle power once lost from the gas through the effect of cold is never recovered (page 1151).

The reading of the cross-examination of the city's tester discloses the utterly unreliable method of test used by the city, which falls far short of compliance with the standard fixed by the law. Not only are there considerable variations due to the personal equation, making necessary the taking of ten readings of candle power in order to secure a fair average and to attempt to eliminate the imperfections of the candle and other inaccuracies of the method used (page 1139), but after the so-called "observed candle power" has been ascertained

elaborate mathematical calculations must be carried out in order to obtain a figure called "corrected candle power" (pages 1140-1141).

The city tester appears to be entirely satisfied with one test per day if he succeeds in obtaining a reading showing the corrected candle power below 22; but where his test shows candle power substantially in excess of 22 he frequently makes two and even three tests in the hope of securing a result which he may report as a violation. If this hope is realized and he finds one test well above 22 and another below it, the average of the two or three tests made is reported as candle power for that day (pages 1143-1147 inclusive). But even with the unfair and unreliable method employed by the city testers, the defendants were unable to prove any substantial or continued violations of the statute; and the proof does not show "persistent, continuous, knowing and wilful" failure of the company, as set up in the answer of the defendant Public Service Commission (page 16).

On the contrary the reports of the City tester of the candle power of appellee's gas show that during 1919, the year prior to the trial, the average candle power was 22.59, and during the first five months of 1920 was 22.72 (pages 1833 *et seq.*). And even over a period of more than four years, when severest winter weather was encountered, the total average candle power found by the City was 22.12. The appellants disproved their contentions by their own evidence, and apparently place no reliance upon their assignment of error relating thereto.

VI.

There is no evidence justifying a lower percentage of unaccounted-for gas than the conservative figure of 10% found by the District Court.

In order to indicate the fallacious nature of the claims made by the Attorney-General in his brief on the subject of unaccounted-for gas (pages 52, 53 and 54), it will be necessary to describe in some detail what unaccounted for gas is and how it is ascertained.

A gas company like the present appellee knows from day to day and for a period of months and years, exactly how much gas is made and sent out from its stations; this is ascertained through its large recording meters at the manufacturing plants. It likewise knows, through the reports of its meter readers of the readings of consumers' meters, how much gas is delivered to its consumers for which it may charge the statutory rate. It also knows by like means how much gas it uses in its own works, offices and shops. The sum of the gas recorded in the consumers' meters and the cubic feet of gas used by the company constitutes gas accounted for; this amount is always less than the amount of gas manufactured and sent out, and the difference is unaccounted-for gas.

This difference is due, as testified by the appellee's expert, Mr. Woods, a gas engineer of many years of experience (page 406 *et seq.*), to slow consumers' meters, condensation and leaks in the mains and services, differences in temperature at

which the gas is registered at the consumers' meters, and is a greater percentage of the gas made in a suburban territory built up like the territory of the present appellee as compared with a more congested metropolitan territory (page 407). Thus it was testified that a leakage or loss of gas through these various causes, amounting to 10% of the amount made and sent out, would be a very reasonable amount of unaccounted-for gas for a company like the appellee. Indeed he said upon cross-examination (page 410) that anything from 9 to 12 or 13% would be a fair operating condition.

The appellants do not dispute that some amount of unaccounted-for gas is to be encountered in all gas companies, but undertake by a fallacious table to state unaccounted-for gas, not in percentages, but in terms of cents per thousand cubic feet, a thing which we shall demonstrate is meaningless.

Inasmuch as there are less cubic feet sold than are actually made, the cost per thousand cubic feet *sold* will always be greater than the cost per thousand cubic feet *manufactured*. This may be seen by reference to complainant's exhibit 64 (pages 1569 and 1570). The total quantity of gas made, as appears on page 1570, was 380,086,000 cubic feet. The total operating cost was $241,176.84, resulting in a figure of 63.45 cents per thousand cubic feet made. Of this quantity 1,933,300 cubic feet were used by the appellee and 336,241,400 cubic feet were sold to its consumers, as disclosed by the reading of consumers' meters. The difference between the sum of the latter two figures and the first figure given above (after giving

consideration to a small variation in the gas on hand in the storage holders) is 41,915,300 cubic feet, which represents the gas lost or unaccounted for, and is 11.03% of the total quantity made.

Stating it in another way, it may be said that it was necessary in the year 1919 to manufacture 380,086,000 cubic feet of gas in order to deliver to paying consumers 336,241,400 cubic feet; using this last amount as a divisor of the operating expenses shows a cost per thousand cubic feet *sold* of 71.73 cents (page 1571). The difference between this figure and 63.45 cents, the cost per thousand made, is 8.28 cents per thousand. It is not correct, however, to say that unaccounted-for gas cost 8.28 cents per thousand cubic feet, for in this figure also is found the gas used by the company.

Nor does a comparison of this figure, derived by subtracting the cost per thousand cubic feet sold from the cost per thousand made, in other years, offer any basis of comparison, for with the varying operating cost due to changing price levels from year to year the quantity of unaccounted for gas is not disclosed by the difference in price between the cost per thousand sold and the cost per thousand made. It may be illustrated by a glance at defendants' exhibit A13, referred to in the brief of the Attorney-General. This table was prepared by a witness for the defendant Public Service Commission, who said he had compiled it from the company's books and from the reports of the company to the Public Service Commission made annually in accordance with the requirements of law (page 1164). The cross-examination, however, dis-

closes that it is largely a computation made by the witness. A comparison of the various figures from 1909 to 1919, comparing the total production expense in cents per thousand cubic feet with the gas unaccounted-for in the line immediately above it, would show that there is no relationship whatever to be deduced from the figures.

A low quantity of unaccounted-for gas in a year when prices were high would show a comparatively high cost per thousand, while a very large amount of unaccounted-for gas in a year when prices were comparatively low would show a low cost per thousand. This is illustrated by the following table in which we have set up opposite the table printed on page 53 of the appellants' brief, the actual percentage of unaccounted-for appearing in each of the years for which the so called cost of unaccounted-for is stated:

	Difference between cost per M cu. ft. made and sold.	Actual percentage.
1909	5.67	15.23%
1910	6.62	18.88%
1911	6.03	17.50%
1912	6.25	18.49%
1913	6.79	18.13%
1914	5.97	15.13%
1915	6.32	16.37%
1916	4.40	10.74%
1917	4.11	7.78%
1918	5.27	8.07%
1919	8.27	11.02%

From the foregoing we see that while the apparent cost of unaccounted for gas did not fluctuate materially throughout the period, the actual percentage of unaccounted varies greatly, and while

comparatively low in 1919, nevertheless results in a comparatively high cost per thousand because of the higher price level and consequent increase in operating costs of that year.

In view of the foregoing percentages of unaccounted for, taken from the same sources as defendants' exhibit A13, what becomes of the appellants' claim that unaccounted for gas should be stated as an average over a period of years, a theory which they succeeded in inducing Judge Hand in the *Consolidated Gas Company* case to adopt? The average unaccounted for for the ten years stated amounts to about 14%. It appears as a generally diminishing percentage down to 1918, in which a winter of extraordinary severity was encountered. In 1919 and 1920 the Douglaston extension, comprising more than six miles of transmission mains, constructed pursuant to the mandate of the defendant Public Service Commission, was in operation, through which gas at high pressure is transmitted to the sparsely settled community of Douglaston. Under the conditions there existing as well as under the severe winter weather conditions in that year, the percentage of unaccounted gas necessarily increased (pages 491-494, etc.).

In view of these facts the Master was fully justified in accepting as he did the actual figure of 11.03% unaccounted for gas for the year 1919 as typical of the cost of that period, for unaccounted for gas is a *fact* and not a *theory* and should be taken into consideration in connection with all the circumstances influencing the cost of gas at a given time; and what it may have been under other con-

ditions of coal, oil, weather, etc., in previous years, or what it may have averaged over a period of varying conditions, can have no bearing upon present unaccounted for gas.

In like manner the court is well within the margin of safety when, in order to take all the doubtful questions against the company, he accepts the amount of 10% testified to by the witness Woods as constituting a very reasonable amount of unaccounted for gas for a company such as the appellee. We have already pointed out that no one disputed the testimony of this witness nor attempted to show that the amount of unaccounted for gas either was not the percentage of 11.03 shown by the record or was an excessive percentage. All that is sought by the appellants is to whittle away the legitimate operating expenses proven by the appellee by an ingenious but fallacious attempt to translate unaccounted for gas into cents per thousand cubic feet. This as we have shown presents no reliable basis for comparison.

It is significant in this connection to note that the appellants, while they contended for an average of a long period of years in the *Consolidated Gas Company* case, carefully refrain here from calling attention to the *percentage* of unaccounted for gas prior to the years 1918 and 1917, the only two years in the table printed above where the unaccounted for fell below 10%. If their contentions in the *Consolidated Gas Company* case are correct, the unaccounted for to be taken in this case should not be less than 14%. Indeed, in a company similarly situated Judge Hough accepted 15% as reasonable (see his opinion in *Kings County Lighting Co.* v. *Newton*, No. 295, submitted herewith).

VII.

The Proper Rate of Return.

As in the *Consolidated Gas Company* case, the Master found eight per cent. per annum to be a reasonable and proper rate of return upon the property used in the appellee's business (Record, page 44). This finding is based upon the same proof that was submitted in the *Consolidated* case (pages 880 to 910), and as it is fully covered in the Appellee's General Brief in that case (Docket No. 257, General Brief for Appellee, Point Sixth, page 23); further discussion need not be undertaken here.

VIII.

The Appellee should be allowed a fair return on the present value of all its used and useful property; the minimum value of tangible property, found by the District Court, is far less than any sum justified by the law or the evidence.

Under Point XIII, p. 344, of the Appellee's Brief on the Facts and Incidental Questions of Law, submitted contemporaneously herewith in *Consolidated Gas Company* v. *Newton*, we have set forth at length our reasons for believing that, as the State Court of New York has held (*Municipal Gas Co.* v. *Pub. Serv. Comm.*, 113 Misc. 751), following the decisions of this Court, a gas corporation is constitutionally entitled to have its fair return computed upon the *present value of* its property at the time the rate complained of is being tested, and not by the original cost of such property. For a full discussion of the decided cases, we beg to refer here to pages 350 *et seq.* of that brief.

In the present case, as we have seen, the appellee *did prove the full present value of its property, upon undisputed evidence* (Findings Nos. 36, 40 and 41; Record, pages 42, 43).

In addition to proving the *present value of* its property, as of the time of trial, the appellee also proved:

(1) The cost to reproduce the property by applying to the *present inventory of* property the unit prices prevailing as of January 1, 1914; and

(2) In rebuttal of the defendants' claims, the appellee's actual investment in its gas properties.

This Court thus has before it all possible pertinent facts to reach and state an accurate, adequate and comprehensive figure, for the value of the appellee's property as of the time of trial. The appellee contends for a return based on "*present* value", and not on the original cost of the property.

In any event, however, and under any possible theory, the figure used by the District Court for the purpose described by him (i. e., what the defendants admit was the original cost of tangible property admittedly used and useful), was and is far too low.

As already pointed out, the District Court found the actual cost of the tangible property to be $1,130,497.08 (page 115), as to which there is no controversy. This figure is composed of the item of $280,108, representing the amount agreed by both parties to represent the actual cost of property at present in use and acquired prior to August 1, 1904; and $850,389.08, representing the cost of net additions to the property since August 1, 1904 (Master's opinion, page 54). At page 1178 of the record the defendants' witness, Hine, testified that he took the figure in complainant's exhibit 96 showing the amount expended prior to 1904 and still in use, and on page 1180 he testified that as to the additions to the property since 1904 he did not make any change in the figures of the complainant's witness. These figures being accepted by both sides as representing actual costs, there can

be no question that the sum of these figures found by the court as the minimum value of the complainant's property is correct. Were it merely necessary to justify the court's figures we believe this would be sufficient. But the appellee believes both the Master and the court erred largely on the side of prudence, and in order to demonstrate the ultra-conservative nature of the findings as to value made by each of them, we desire here to point out briefly the evidence as to present value offered by the appellee upon the trial.

Present Reproduction Cost.

The appellee submitted through Col. Miller, an expert gas manufacturer and builder of gas apparatus, a detailed inventory of all the plants and property of the appellee, together with the cost to reproduce the same as of January 1, 1920. This appraisal is printed in full at page 560 of the record. To the total of $2,907,062 there shown should be added according to this witness at least $525,000 to $550,000, representing going value (record, page 814). As to the items of this appraisal representing the tangible property, the appellants offered no testimony tending in any respect to contradict either the correctness of the inventory itself or the correctness of the unit prices applied thereto by the witness. The appellants had this inventory well in advance of the trial and for many weeks prior thereto and during the trial were engaged through their experts in examining the property and checking the inventory; their failure to challenge any item therein, as well as the use thereof by the witness Hine in computing his own tables, establishes their correctness.

As to the portion of the appraisal dealing with development expenses, cost of financing, working capital, and other so-called "intangibles", there was dispute upon the trial as to the amount, but all parties agreed that some allowance for these various items as well as for going value should be made.

The Special Master, while not basing his rate base upon reproduction cost or present value, made a finding (page 42) of the total present reproduction cost, including land of $2,100,774.90. To this sum he found various structural overheads, going value, etc., should be added in order to make a complete valuation (page 43).

The items used by the Master to get the foregoing total not having been the subject of any dispute upon the trial, it is plain that if present value is to be considered in computing the rate base, the present value of the appellee's property useful in its gas business will be far in excess of the sum found by the Master or by the court, even after the deduction of the enormous sums for accrued depreciation claimed by the appellants.

Land.

The appellee owns and uses in its manufacturing plant a tract of land containing 107,402 square feet (exhibit 112, page 1719). The appellee offered upon the trial the testimony of a highly qualified real estate expert residing in that portion of the city, who testified that on January 1, 1920, that land was worth $55,000 and would bring that sum in the market (record, page 297 *et seq.*).

The Master included as the cost of land in his finding, both as to reproduction cost and as to

actual cost, the sum of $15,153.90, made up of the figure of $19,423 for land acquired prior to August 1, 1904, and $20,630.90, the actual cost of additions to real estate since 1904 (page 56). These figures, therefore, constitute part of the figures of tangible property above referred to and are undisputed.

Exhibit 112 (page 1718), prepared at the request of the Special Master upon the basis of the average unit cost of land acquired since August 1, 1904, establishes the figure of $47,867.93 as an estimated present cost of land upon the basis of the cost of that portion of it acquired since 1904 (see record, page 1384).

The authorities requiring ascertainment and use of present value in a case such as this require the use of the present value of land even more unhesitatingly than in the case of plant and machinery. This was clearly held in the *Minnesota rate* cases (230 U. S. 351). The valuation of Mr. Halleran of $55,000 was not impeached in any respect upon the trial but on the contrary was strengthened upon cross-examination and should have been accepted by the Master as the present value of real estate, particularly when making a finding as he did of the present cost to reproduce.

The Method Used by the Master of Ascertaining Value.

As we have already pointed out, the actual cost to the company of the various items of tangible property in use on December 31, 1919, was the subject of agreement between the parties. This property, as shown in exhibit 96 (page 1605) is subdivided into two classes, (1) property on hand

August 1, 1904, which both parties agree cost and was reasonably worth as of that date $280,108, and (2) cost of additions to the property since, shown in detail on exhibit 96 and on the books of record of the company and agreed by both parties as being $850,389.08, making the total of $1,130,497.08 accepted by the court as the minimum value of the tangible property.

In addition to the foregoing items of tangible property, the appellee asked the Master to find in accordance with the evidence of the books as summarized in exhibit 96 (page 1606), $320,350 for preliminary organization and other undistributable structural costs, $500,000 for franchises and rights, and at least $500,000 for going value (record, page 814). The Master allowed as covering all of the last three items enumerated the sum of $390,380.86, which he reached as follows (page 55):

> "At the time of the merger of the Newtown and Flushing Gas Company into the New York and Queens Gas Company, the total property and assets of the former (exclusive of working capital) were carried on the books of the former at $694,678.00. Since that time, plant and equipment so acquired by the complainant on August 1, 1904, has been retired, at a book cost totalling $24,189.14. The tangible property acquired on August 1, 1904, and still in service, is agreed to have cost before August 1, 1904, and to have been worth on that date, the sum of $280,108 exclusive of franchises and rights and 'going value' and the undistributed structural items under consideration. The deduction of these two items from the book total $694,678.00 leaves only $390,380.86 as representing the book cost to the Newtown and Flushing Gas Company of the franchises and rights, the 'going value' and the undistributable structural items hereinbefore mentioned.

There is sufficient evidence to warrant my conclusion upon the present record that the item of 'franchises, good will, etc.', on the books of the complainant and its predecessors, covered, among other things, preliminary and development expenses and the various other items which Mr. Miller puts in at a total of $320,350, and also the cost of 'franchises and rights', which Mr. Miller puts in at $500,000; and I think it will be fair for me to say, for the purposes of the present case, that for all of these items just referred to, the New York and Queens Gas Company actually paid no more than their book cost to the Newtown and Flushing Gas Company and its predecessors, viz: $330,380.86, and that these elements had cost the Newtown and Flushing Gas Company and its predecessors, and were worth, on August 1, 1904, at least that sum."

The foregoing finding of the Master as to undistributable structural costs, going value and the like, is based upon the defendants' exhibit Y, page 760, showing the balance sheet of the Newtown and Flushing Gas Company, the predecessor of the appellee, just before the acquisition of its property by the appellee. This exhibit was offered by the defendants and is based upon books of account placed in evidence by the defendants. The appellants are, therefore, in no position to dispute the correctness of the figures of property shown upon the books placed in evidence by themselves. Indeed the appellants did not dispute upon the trial, nor do they dispute here, that in an enterprise of this kind actual costs are incurred for such items as organization expense, interest during construction, etc., grouped together here under the title of undistributable structural costs; nor that some allowance should be made for going value. The only real controversy upon the trial, as to valuation,

was as to the amount to be allowed for these items and for working capital, and on the subject of depreciation, which is dealt with in another section of this brief.

That the finding of the Master was very conservative may be seen by a glance at this balance sheet, the largest single item of which is for "franchises, good will, etc." It is significant, however, that no *gas plant* is shown but only real estate, mains, meters and other accessories. It is apparent, therefore, that the gas plant, which it was conceded has existed at this site since 1859, must be found in the item "franchises, good will, etc." of $469,435.61.

The statement in the brief of the appellant Attorney General (page 89), that the "appellants successfully convinced the court that this finding of the Master was erroneous", is without foundation. In his original opinion the court declined to pass upon the question of valuation at all (Record, page 113), saying that any expression of opinion going beyond the requirements of the case would be mere dictum and would amount to a little more than an individual opinion.

Upon the earnest request of the complainant, however, the court upon settlement of the final decree recognized the force in the contention that he should find that the company owned property of some value. The court, therefore, took the actual cost of tangible property concerning which there was no dispute (page 115). The court said:

> "This figure, of course, does not include various other controverted items referred to in the master's report."

Far from finding the Special Master to have committed an error in his finding on value, the District Court confirmed the Master's finding as far as he thought it necessary to do so, refusing to enter into a determination of the controverted items.

The absurd values set forth in the appellants' brief are arrived at (1) by the deduction of enormous sums for theoretical accrued depreciation (dealt with in another portion of this brief) and (2) by starvation allowances for working capital, organization, interest and taxes, etc., and a failure to make any allowance whatsoever for franchises or going value, although the testimony was undisputed on both sides that allowances for such items should be made, and the complainant offered evidence placing going value at $500,000 or more which was not controverted by any witness for the defendants.

Furthermore the error of $33,444 in the tables of the witness Hine, who is responsible for the valuations, cannot be so lightly brushed aside as is sought to be done by the appellants in their brief (page 93). This error occurred in the exhibit which is the basis for all the subsequent calculations of the witness (record, page 1332). It is carried forward into exhibits A106, A107 and numerous other exhibits depending upon the table in which the error was made (page 1333). No attempt was ever made by the witness to correct his inaccurate computations, an inaccuracy which, together with the rest of his cross-examination, thoroughly discredited the witness upon the trial, and because of these and because of the unintelligible method of making up this table, they were entirely disregarded by the Master in arriving at his finding.

The Appellee's Actual Investment in the Property.

On August 1, 1904, as found by the tables prepared and introduced by the defendants (defendants' exhibit Y) the appellee actually paid for the properties including franchises, rights and the value which attaches to a going concern, $1,250,000 in face value of its stock and bonds. Opening entries were made in its books reflecting these properties and that payment.

From and after August 1, 1904, the books correctly and fully showed the cost of all additions to appellee's property. No item of such additions has been challenged by the appellants; they proved these items and stand on them.

If then the property acquired in 1904 was fairly worth in money what was paid for it, the books correctly show the present investment of the Company in its property.

We believe that upon all the evidence, the property acquired in 1904 had cost and was then worth what was then paid for it in the par or face value of the securities turned over and that such securities were then worth at least their par or face value. This is confirmed by the testimony of Mr. Miller for the appellee and Mr. Hine for the appellants, by indications as to market quotations, by the known fact as to prices prior to 1904, and by the weight and presumption attaching to the action of the corporate trustees and by all the surrounding circumstances.

The Necessary Investment Per Thousand Cubic Feet Sold.

A still further check is provided by the testimony of the appellee's witness Miller, a gas engineer of nation-wide repute and of great experience and attainments. He testified (page 943) that the reasonable and necessary investment per thousand cubic feet of annual sales for plant and distributing systems like that of the appellee Company would be between $5.50 and $6. This was not disputed by the defendants except that one of their witnesses questioned the possibility of stating investment cost in terms per thousand cubic feet of annual sales. This witness, however, was not a gas manufacturer and has had no experience in investment matters. The Master found that $5 per thousand cubic feet of gas sold fairly represents the actual and necessary investment in the property used and needed for the manufacture and transmission and distribution of gas, and that such investment may for the purposes of this case be taken to be at least that sum (finding 35, page 41).

This figure of $5 applied to the annual sales of $336,000,000 for 1918, produces $1,680,000 as the necessary investment, a figure closely approximating the figure of $1,655,877.94 taken by the Master for the rate base in finding 34 (page 41).

The figure finds further confirmation in the action of the defendant Public Service Commission, in 1913, in valuing the Brooklyn Borough Gas Company, a company comparable to the appellee here in that it makes water gas only, at $4.85 per thousand cubic feet of annual sales (4 P. S. C.

First Dist. N. Y. 328), and this value was obtained after deducting a large amount of accrued theoretical depreciation. The company's investment was actually over $5 per thousand. Similar valuations were made in the cases of the Kings County Lighting Company and the Queens Borough Gas and Electric Company. It is obvious that these valuations relating to property erected or installed prior to 1911 are far below what such property would have cost per unit in the period of high prices prevailing in 1919 and 1920 and at the present time. Surely Colonel Miller's figure of $5.50 to $6 is a very reasonable estimate of present day prices and the figure of $5 taken by the Master is a very conservative estimate.

This matter of a standard or usual investment per thousand cubic feet of gas sales was discussed fully under Point XIV, pages 366-368 of the Appellee's Brief on the Facts, in the *Consolidated Gas Company* case (Docket No. 257), to which we here refer.

Working Capital.

The appellant, Attorney-General, in his brief, page 74, rather vaguely combines working capital, which is tangible capital, with undistributable structural items or overhead, and asserts the combination should be allowed at some indefinite figure less than $100,000. The Master adopted $135,000 as the proper allowance for working capital in the amount upon which the company was entitled to earn a return (page 56). The defendants appear to derive some comfort from the fact that the Master's report respecting this item was not affirmed by the District Court (brief, page 75). Like consolation is also afforded to the appellee on the ground that neither was the Master's report

in this respect reversed or overruled by the District Court; the fact is that the District Court did not pass upon the question of working capital, deeming it unnecessary to do so for the purposes of this case. His sole finding upon property was the undisputed figure of the actual cost of the tangible property.

Working capital may be defined as "the total floating or mobile capital required in addition to the fixed capital". It is found in the form of cash requirements, or in the form of material and supplies. Money has to be put into things which are not reflected in the fixed capital account and a reservoir of cash has to be kept on hand to handle current transactions promptly and economically (Record, page 566). Colonel Miller, an expert gas manufacturer and an appraiser of gas properties, estimated the complainant's working capital requirements at $165,000, made up as follows (Record, page 567):

Materials and supplies.....	$60,000
Cash	50,000
Accounts Receivable	35,000
Gas furnished but not yet billed.	20,000
	$165,000

The defendants claim that no more than $70,000 working capital for the year 1919 should be allowed (Defendants' Exhibit A112, page 1880; Testimony of Maltbie, Record, pages 1214 *et seq.*; cross-examination, pages 1261 *et seq.*, inclusive).

The Master concluded from all the evidence that $135,000 was a reasonable amount to be allowed for working capital and included the same in the total sum upon which the complainant is entitled to

earn a fair return (Finding No. 33; Master's Opinion, pages 41, 55-56).

The appellee believes that it is entitled to the allowance of the full amount of $165,000 as testified to by Colonel Miller, who said upon cross-examination that in his opinion it was a very important amount for the company to have on hand if it was to operate economically and pay its bills promptly, taking advantage of cash discount (Record, page 856). When asked if 15 cents a thousand cubic feet of annual sales would not be sufficient, he said: "No living company could operate on that." Even the witness for the defendants, Maltbie, who used every means known to pare down the amount of working capital, was compelled to admit that a small company, such as the complainant, requires a larger working capital per thousand cubic feet than the Consolidated Gas Company (Record, page 1267). The Special Master in the Consolidated case allowed 20 cents per thousand cubic feet of annual sales. Colonel Miller's figure in this case amounts to 50 cents per thousand.

The methods by which the witness Maltbie arrives at his ridiculously low figure for working capital, in so far as those methods are comprehensible at all, are disclosed by him in his cross-examination. It is apparent from the reading of that cross-examination that he failed to take into account the very important element of gas furnished to consumers but not yet billed, an element which all witnesses agree exists in the case of all gas companies. His method is further faulty in that it fails to take account of accounts receivable, the witness claiming that they should be balanced by accounts payable, a fallacious doctrine leading to the most absurd conclusions.

Moreover, the witness did not adhere to the figures which he pretended to have used both for materials and supplies and for cash, making them vary without apparent reason from the actual book figures furnished him, and making use of a so-called "rounding off" process to arrive at a figure satisfactory to himself. For example, in making the computation for 1906, the witness used the figure of $10,000 for materials and supplies, when the defendants' own exhibit A10 showed an amount of over $23,000 (Record, page 1761). For the year 1919 the witness reported $25,000 for materials and supplies, whereas complainant's record showed $60,000. The witness used $15,000 for cash where the complainant's record showed $50,000 (Record, page 1272). Instances might be multiplied from the cross-examination of this witness showing the arbitrary and unreasonable paring down to which he resorted in order to reduce the amount of working capital of the complainant company.

Moreover this very witness Maltbie, while a member of the Public Service Commission for the First District, allowed as working capital, in decisions filed by him, sums far in excess of the amounts allowed in this case. The details of these decisions and the allowances made by him for the working capital of gas companies in this territory, will also be found in his cross examination in the present record. See, also, discussion of working capital, under Point XI of the Appellee's Brief on the Facts, in *Consolidated Gas Company* v. *Newton* (Case No. 257), argued contemporaneously herewith. The witness' attitude upon the witness stand in attempting to support his ridiculously low estimate was obviously not tempered by the same sense of fairness and freedom from bias,

which may be assumed to have actuated him while he was a member of the Public Service Commission.

It must further be remembered in considering this subject of working capital, that the conditions reflected at the end of the year 1919 were very different from those of earlier years in this century, with respect to the quantity of cash or the quantity of materials and supplies which the company must have on hand. As to materials, conditions are adverse, especially as to the principal items of coal and oil. The price of each of these has more than doubled so that a given amount of money allowed for the items of coal and oil on hand represents only half as much material as in former years. The same is true of cash on hand of which a far greater quantity must be kept available in order to perform the same amount of useful service as formerly. Furthermore this company has been suffering for years from this inadequate and confiscatory rate and the lack of necessary funds with which to operate, and indeed has had to borrow money, not only for the payment of its bond interest but for the payment of its current operating expenses. It has been continuously upon an inadequate cash basis. The figures in the company's balance sheet showing cash on hand, therefore, cannot be taken as a proper indication of an adequate amount for the economical conduct of its business.

It is submitted that Colonel Miller's estimate of $165,000 is under all the circumstances a very fair and conservative estimate, and that under no conceivable possibility could the court have confirmed any figure lower than the extremely low figure arrived at by the Master as allowable for this item.

IX.

The claim that the cost of the Douglaston Extension should not be included in the "rate base" is without merit.

The contention is made by the appellants that the investment which the State Commission required this appellee to make in extending its mains to the remote community of Douglaston should not have been included by the Master in the sum found by him as the value of the appellee's property.

The history of that litigation will be found stated at length in *New York and Queens Gas Company* v. *McCall*, 245 U. S. 345, where this Court affirmed the order of the State authorities requiring this extension.

The validity and propriety of this Order of the Commission was fairly open to controversy. It was set aside, in first instance, by the Appellate Division of the State Supreme Court (171 App. Div. 580), reinstated by the Court of Appeals, and finally affirmed by this Court, which has recently, in the *Ben Avon Borough* case (253 U. S. 287, 295) left some doubt whether it still adheres to its ruling in *New York and Queens Gas Company* v. *McCall*. Surely this appellee was within its rights in seeking a judicial review of a Commission Order of such doubtful validity. In particular it is not blameable for failure to comply with an Order of the State Commission during the time that Order had been annulled by the State Court.

After the decision of this Court the great War brought the necessity of the conservation of labor

and materials. In accordance with the recommendation of the Federal authorities charged with seeing to it that construction not absolutely essential was deferred during the War, the defendant Public Service Commission granted the company additional time within which to comply with the Order of the Commission (Order in Case No. 1856; Record, page 1597). Before the trial of this case, however, the work had been completed, at an expense of $145,735.71 (record, page 745), and the investment now constitutes a part of the property used by the company in its business.

The fact that this extension was not completed until the latter part of the year 1919 does not prevent its being a part of the property used and useful when the case was tried and decided, in 1919 and 1920.

It is difficult to see why the company should be denied any return upon it, especially in view of the large investment the company was required to make in it, and the complete lack of any substantial earnings therefrom. Gas is supplied to this section only through high pressure mains, and actually costs several dollars per thousand cubic feet sold in that territory.

In our view of the case the inclusion or omission of this investment in the rate base could not affect the result, but there was no error in its inclusion, and the claims of the appellants have neither merit nor sincerity.

X.

The Special Master and the District Court were correct in refusing to make any deductions for so-called "depreciation", from the appellee's actual investment in gas property.

Under Point XV, p. 369 *et seq.* of the Appellee's Brief on the Facts, in *Consolidated Gas Company v. Norton* (Docket No. 257), we have dealt fully with the subject of "depreciation", and have, we think, demonstrated the soundness of the numerous rulings of State and Federal Courts, in these and other cases, which have refused to make deduction for "accrued theoretical depreciation".

Without developing anew herein the argument or citations of authority, we beg to refer to that brief. That case and the case at bar present similar records, so far as concerns the testimony on this particular subject.

The Special Master, in his Opinion in the present case, summarized the testimony and discussed the subject with great clarity (Record, page 57 *et seq.*).

Upon the present trial it was developed very clearly from the defendants' witnesses that the adoption of their theories would add at least three cents per thousand to the required rate per thousand cubic feet (see Testimony of Hine; Record, page 1885 *et seq.*).

The cross-examination of the defendants' witness in this case will be found a complete revelation of the anomalies and absurdities of the "accrued de-

preciation" theory and the methods of conjecture, speculation, and utter error, on which it is based.

The Special Master found as a fact, from uncontradicted testimony, that (Finding No. 32):

> "The plant, machinery and equipment used in the gas business of the complainant company have been and are maintained in excellent operating condition; proper repairs, renewals and replacements have been made as and when needed, and the same are now in as high a state of efficiency as if new."

The uncontradicted testimony of Colonel Miller (Record, page 656), confirmed as to the condition and efficiency of the property by the only "engineer" placed on the stand by the defendants (Mr. Hine) (Record, page 1181), was that an expenditure of $6,144.07 for repairs, renewals and replacements would put the plant, structures, machinery and equipment in a condition substantially as good as when they were erected or installed. Colonel Miller's tabulation, printed in the record at page 658 *et seq.*, gives the detailed estimates for such work in full. Concerning this the Master said (Opinion, page 60):

> "This sum, however, does not, in my opinion, measure any impairment in the present value of the property used and useful in the gas business. It represents merely an unmatured obligation to *maintain* the property in efficient operating condition *out of future earnings*, the expert witnesses of both the complainant and the defendants agree *that it was and is maintained in efficient and first class condition*. I, therefore, have not deducted this or any other sum representing so-called accrued depreciation from the amount found by me to represent the investment of the complainant in its gas property upon which it is entitled to have its rate such as to yield a reasonable return."

XI.

The final decree entered by the District Court should be affirmed, with costs.

*For the convenience of the Court, we have indicated, in connection with each of the Points contained in the respective briefs of the Appellants, the pages of the Appellee's Brief at which such Point of the Appellants is replied to. The Appellee's Brief in this case was prepared and filed for its argument as originally assigned, contemporaneously with the argument in *Consolidated Gas Company v. Newton, et al.* (Docket No. 257), heard in this Court on November 18, 1921, involving substantially the same parties defendant, in which the same counsel appeared for the respective sides of the litigation. For that reason, contentions by the appellants which are common to both cases were dealt with primarily in the briefs in behalf of the *Consolidated Gas Company* in No. 257 and suitable references to those briefs were made in the Appellee's Brief in the instant case and are incorporated in these indices. At certain points in these indices, cross-references have also been made directly to the Exhibits and testimony in the present case. We have also, on page 8, *post*, set forth a Subject-Index of the Appellee's Brief.

MR. JUSTICE CLARKE concurs in the ...

NEWTON, ATTORNEY GENERAL OF THE STATE OF NEW YORK, ET AL. *v.* NEW YORK & QUEENS GAS COMPANY.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK.

No. 296. Argued January 6, 1922.—Decided March 6, 1922.

Approving the conclusion of the master and the District Court that a gas rate fixed under Laws New York, 1906, c. 125, had become confiscatory.

269 Fed. 277, affirmed.

APPEAL from a decree enjoining enforcement of a statutory gas rate as confiscatory. See also the cases, *ante*, 165, and *post*, 180.

Mr. Wilber W. Chambers, with whom *Mr. Charles D. Newton,* Attorney General of the State of New York, and *Mr. Clarence R. Cummings* were on the brief, for Newton, Attorney General.

Mr. M. Maldwin Fertig, with whom *Mr. John P. O'Brien* and *Mr. James A. Donnelly* were on the brief, for Wallace, District Attorney.

Mr. William L. Ransom, with whom *Mr. John A. Garver, Mr. Charles A. Vilas* and *Mr. Jacob H. Goetz* were on the briefs, for appellee.

Mr. Justice McReynolds delivered the opinion of the court.

This appeal brings up for review a final decree entered November 19, 1920, which adjudged that in so far as c. 125, Laws of New York of 1906, prohibited appellee from charging and receiving more than $1.00 per thousand cubic feet for gas delivered and sold in the Third Ward, Borough of Queens, New York City, it was and had been confiscatory since January 1, 1919. 269 Fed. 277.

After taking a great mass of evidence the Master reported that the actual cost to appellee of manufacturing and distributing gas exceeded $1.00 per thousand cubic feet and that the challenged act was confiscatory. With this conclusion the trial court agreed and entered an appropriate decree. We find no sufficient ground for disapproving the action so taken, and it is accordingly

Affirmed.
